| List of Figures                                                    | ix        |
| Foreword                                                           | xi        |
| Preface                                                            | xiii      |
| <b>I Mathematical Foundations</b>                                  | <b>1</b>  |
| <b>1 Mathematical Preliminaries: Energy and Stress</b>             | <b>3</b>  |
| 1.1 Finite Kinetic Energy: The Hilbert Space $L^2(\Omega)$         | 3         |
| 1.1.1 Other norms                                                  | 7         |
| 1.2 Finite Stress: The Hilbert Space $X := H_0^1(\Omega)$          | 8         |
| 1.2.1 Weak derivatives and some useful inequalities                | 10        |
| 1.3 Some Snapshots in the History of the Equations of Fluid Motion | 12        |
| 1.4 Remarks on Chapter 1                                           | 15        |
| 1.5 Exercises                                                      | 15        |
| <b>2 Approximating Scalars</b>                                     | <b>17</b> |
| 2.1 Introduction to Finite Element Spaces                          | 17        |
| 2.2 An Elliptic Boundary Value Problem                             | 26        |
| 2.3 The Galerkin–Finite Element Method                             | 30        |
| 2.4 Remarks on Chapter 2                                           | 33        |
| 2.5 Exercises                                                      | 34        |
| <b>3 Vector and Tensor Analysis</b>                                | <b>37</b> |
| 3.1 Scalars, Vectors, and Tensors                                  | 37        |
| 3.2 Vector and Tensor Calculus                                     | 39        |
| 3.3 Conservation Laws                                              | 43        |
| 3.4 Remarks on Chapter 3                                           | 48        |
| 3.5 Exercises                                                      | 49        |

|            |                                                   |            |
