Contents

Preface	ix
1 Introduction	1
1.1 Enclosing a Solution	1
1.2 Bounding Roundoff Error	3
1.3 Number Pair Extensions	5
2 The Interval Number System	7
2.1 Basic Terms and Concepts	7
2.2 Order Relations for Intervals	9
2.3 Operations of Interval Arithmetic	10
2.4 Interval Vectors and Matrices	14
2.5 Some Historical References	16
3 First Applications of Interval Arithmetic	19
3.1 Examples	19
3.2 Outwardly Rounded Interval Arithmetic	22
3.3 INTLAB	22
3.4 Other Systems and Considerations	28
4 Further Properties of Interval Arithmetic	31
4.1 Algebraic Properties	31
4.2 Symmetric Intervals	33
4.3 Inclusion Isotonicity of Interval Arithmetic	34
5 Introduction to Interval Functions	37
5.1 Set Images and United Extension	37
5.2 Elementary Functions of Interval Arguments	38
5.3 Interval-Valued Extensions of Real Functions	42
5.4 The Fundamental Theorem and Its Applications	45
5.5 Remarks on Numerical Computation	49
6 Interval Sequences	51
6.1 A Metric for the Set of Intervals	51
6.2 Refinement	53

6.3	Finite Convergence and Stopping Criteria	57
6.4	More Efficient Refinements	64
6.5	Summary	83
7	Interval Matrices	85
7.1	Definitions	85
7.2	Interval Matrices and Dependency	86
7.3	INTLAB Support for Matrix Operations	87
7.4	Systems of Linear Equations	88
7.5	Linear Systems with Inexact Data	92
7.6	More on Gaussian Elimination	100
7.7	Sparse Linear Systems Within INTLAB	101
7.8	Final Notes	103
8	Interval Newton Methods	105
8.1	Newton's Method in One Dimension	105
8.2	The Krawczyk Method	116
8.3	Safe Starting Intervals	121
8.4	Multivariate Interval Newton Methods	123
8.5	Concluding Remarks	127
9	Integration of Interval Functions	129
9.1	Definition and Properties of the Integral	129
9.2	Integration of Polynomials	133
9.3	Polynomial Enclosure, Automatic Differentiation	135
9.4	Computing Enclosures for Integrals	141
9.5	Further Remarks on Interval Integration	145
9.6	Software and Further References	147
10	Integral and Differential Equations	149
10.1	Integral Equations	149
10.2	ODEs and Initial Value Problems	151
10.3	ODEs and Boundary Value Problems	156
10.4	Partial Differential Equations	156
11	Applications	157
11.1	Computer-Assisted Proofs	157
11.2	Global Optimization and Constraint Satisfaction	159
11.2.1	A Prototypical Algorithm	159
11.2.2	Parameter Estimation	161
11.2.3	Robotics Applications	162
11.2.4	Chemical Engineering Applications	163
11.2.5	Water Distribution Network Design	164
11.2.6	Pitfalls and Clarifications	164
11.2.7	Additional Centers of Study	167
11.2.8	Summary of Links for Further Study	168

11.3	Structural Engineering Applications	168
11.4	Computer Graphics	169
11.5	Computation of Physical Constants	169
11.6	Other Applications	170
11.7	For Further Study	170
A	Sets and Functions	171
B	Formulary	177
C	Hints for Selected Exercises	185
D	Internet Resources	195
E	INTLAB Commands and Functions	197
	References	201
	Index	219
