|          |                                                               |           |
|----------|---------------------------------------------------------------|-----------|
| <b>1</b> | <b>The Banach Algebra <math>M(\mathbb{T})</math></b>          | <b>1</b>  |
| 1.1      | Basic Definitions                                             | 1         |
| 1.2      | The Gelfand Spectrum $\Delta$ of $M(\mathbb{T})$              | 7         |
| 1.2.1    | Generalized Characters                                        | 7         |
| 1.2.2    | Basic Operations                                              | 8         |
| 1.2.3    | Topologies on $\Delta(\mu)$                                   | 8         |
| 1.2.4    | Constants in $\Delta(\mu)$                                    | 9         |
| 1.3      | Generalized Riesz Products                                    | 10        |
| 1.4      | Idempotents in $\Delta$ and Decompositions of $M(\mathbb{T})$ | 14        |
| 1.5      | Dirichlet Measures                                            | 17        |
| <b>2</b> | <b>Spectral Theory of Unitary Operators</b>                   | <b>21</b> |
| 2.1      | Representation Theorem of Unitary Operators                   | 21        |
| 2.1.1    | Construction of Spectral Measures                             | 21        |
| 2.1.2    | Properties of the Spectral Family                             | 22        |
| 2.1.3    | Spectral Representation Theorem                               | 25        |
| 2.1.4    | Invariant Subspaces and Spectral Projectors                   | 26        |
| 2.2      | Operators with Simple Spectrum                                | 29        |
| 2.2.1    | Basic Examples                                                | 29        |
| 2.2.2    | Simple Lebesgue Spectrum                                      | 30        |
| 2.3      | Spectral Decomposition Theorem and Maximal Spectral Type      | 31        |
| 2.4      | Spectral Decomposition Theorem and Spectral Multiplicity      | 34        |
| 2.4.1    | Multiplicity Function                                         | 35        |
| 2.4.2    | Global Multiplicity                                           | 37        |
| 2.5      | Eigenvalues and Discrete Spectrum                             | 40        |
| 2.5.1    | Eigenvalues                                                   | 40        |
| 2.5.2    | Discrete Spectral Measures                                    | 41        |
| 2.5.3    | Basic Examples                                                | 43        |
| 2.6      | Application to Ergodic Sequences                              | 44        |
| <b>3</b> | <b>Spectral Theory of Dynamical Systems</b>                   | <b>49</b> |
| 3.1      | Notations and Definitions                                     | 49        |

|          |                                                                   |            |
|----------|-------------------------------------------------------------------|------------|
| 3.2      | Ergodic Dynamical Systems .....                                   | 51         |
| 3.2.1    | First Examples .....                                              | 51         |
| 3.2.2    | Main Theorems .....                                               | 53         |
| 3.2.3    | Quasi-Invariant Systems .....                                     | 56         |
| 3.3      | Mixing Properties .....                                           | 59         |
| 3.3.1    | Weak and Strong Mixing Properties .....                           | 59         |
| 3.3.2    | Mild Mixing Property .....                                        | 62         |
| 3.3.3    | Multiple Mixing Properties .....                                  | 66         |
| 3.4      | Discrete Ergodic Systems .....                                    | 69         |
| 3.4.1    | Von Neumann's Theorem .....                                       | 69         |
| 3.4.2    | The Kronecker Factor .....                                        | 71         |
| 3.5      | Purity Law and $D$ -Ergodicity .....                              | 73         |
| 3.5.1    | Extremal Properties of Ergodic Probabilities .....                | 74         |
| 3.5.2    | $D$ -Ergodicity .....                                             | 75         |
| 3.5.3    | Applications of Purity Laws .....                                 | 77         |
| 3.6      | Group Extensions .....                                            | 80         |
| 3.6.1    | Two-Points Extensions of an Irrational Rotation .....             | 81         |
| 3.6.2    | Two-Points Extensions of an Odometer .....                        | 85         |
| <b>4</b> | <b>Dynamical Systems Associated with Sequences .....</b>          | <b>87</b>  |
| 4.1      | Topological Dynamical Systems .....                               | 87         |
| 4.1.1    | Minimality and Topological Transitivity .....                     | 87         |
| 4.1.2    | Invariant Measures and Unique Ergodicity .....                    | 90         |
| 4.1.3    | Examples and Application to Asymptotic Distribution .....         | 93         |
| 4.2      | Dynamical Systems Associated with Finitely Valued Sequences ..... | 97         |
| 4.2.1    | Subshifts .....                                                   | 97         |
| 4.2.2    | Minimality and Unique Ergodicity .....                            | 98         |
| 4.2.3    | Examples .....                                                    | 101        |
| 4.3      | Spectral Properties of Bounded Sequences .....                    | 102        |
| 4.3.1    | Correlation Measures .....                                        | 103        |
| 4.3.2    | Applications of Correlation Measures .....                        | 108        |
| 4.3.3    | Examples of Correlation Measures .....                            | 120        |
| 4.3.4    | Back to Finite-Valued Sequences .....                             | 123        |
| <b>5</b> | <b>Dynamical Systems Arising from Substitutions .....</b>         | <b>125</b> |
| 5.1      | Definitions and Notations .....                                   | 125        |
| 5.2      | Minimality of Primitive Substitutions .....                       | 128        |
| 5.3      | Nonnegative Matrices and $\zeta$ -Matrix .....                    | 131        |
| 5.3.1    | Perron Frobenius' Theorem for Nonnegative Matrices .....          | 132        |
| 5.3.2    | Frequency of Letters .....                                        | 135        |
| 5.3.3    | Perron Numbers, Pisot Numbers .....                               | 136        |
| 5.4      | Unique Ergodicity .....                                           | 137        |
| 5.4.1    | Frequency of Factors .....                                        | 137        |
| 5.4.2    | The Unique Invariant Measure .....                                | 140        |
| 5.4.3    | Matrices $M_\ell$ .....                                           | 143        |

|          |                                                            |            |
|----------|------------------------------------------------------------|------------|
| 5.5      | Combinatorial Aspects .....                                | 146        |
| 5.5.1    | Complexity Function and Topological Entropy .....          | 146        |
| 5.5.2    | Recognizability Properties .....                           | 150        |
