Banach Spaces and Descriptive Set Theory: Selected Topics

Contents

1	Basic Concepts	1
1.1	Polish Spaces and Standard Borel Spaces	1
1.2	Trees	3
1.3	Universal Spaces	6
1.4	Comments and Remarks	8
2	The Standard Borel Space of All Separable Banach Spaces	9
2.1	Definitions and Basic Properties	9
2.1.1	Properties of SB	10
2.1.2	Coding the Dual of an $X \in \text{SB}$	11
2.2	The Class REFL	13
2.3	The Class SD	16
2.3.1	The Szlenk Index	16
2.3.2	Norm-Separable Compact Subsets of (B_{Z^*}, w^*)	18
2.3.3	The Szlenk Index is a Π_1^1 -Rank on SD	19
2.3.4	The Dual Class of an Analytic Subset of SD	20
2.4	The Class NC_X	23
2.5	Coding Basic Sequences	25
2.5.1	The Convergence Rank γ	26
2.5.2	Subsequences Spanning Complemented Subspaces	27
2.5.3	Proof of Theorem 2.20	29
2.6	Applications	30
2.7	Comments and Remarks	34
3	The ℓ_2 Baire Sum	37
3.1	Schauder Tree Bases	37
3.2	The ℓ_2 Baire Sum of a Schauder Tree Basis	38
3.3	Weakly Null Sequences in $T_2^{\aleph}$	40
3.3.1	General Lemmas	40
3.3.2	Sequences Satisfying an Upper ℓ_2 Estimate	43
3.3.3	Proof of Theorem 3.6	45

3.4	Weakly X -Singular Subspaces	46
3.5	X -Singular Subspaces	50
3.6	Schauder Tree Bases Not Containing ℓ_1	54
3.7	Comments and Remarks	56
4	Amalgamated Spaces	57
4.1	Definitions and Basic Properties	57
4.2	Finding Incomparable Sets of Nodes	60
4.3	Proof of Theorem 4.6	65
4.4	Comments and Remarks	69
5	Zippin's Embedding Theorem	71
5.1	Fragmentation, Slicing, and Selection	72
5.1.1	Fragmentation	72
5.1.2	Slicing Associated to a Fragmentation	73
5.1.3	Derivative Associated to a Fragmentation	73
5.1.4	The "Last Bite" of a Slicing	75
5.1.5	The "Dessert" Selection of a Fragmentation	76
5.2	Parameterized Fragmentation	77
5.3	The Embedding	80
5.4	Parameterizing Zippin's Theorem	84
5.5	Comments and Remarks	87
6	The Bourgain–Pisier Construction	89
6.1	Kisliakov's Extension	89
6.1.1	Basic Properties	90
6.1.2	Preservation of Isomorphic Embeddings	91
6.1.3	Minimality	92
6.1.4	Uniqueness	93
6.2	Admissible Embeddings	94
6.2.1	Stability Under Compositions	96
6.2.2	Stability Under Quotients	96
6.2.3	Metric Properties	97
6.3	Inductive Limits of Finite-Dimensional Spaces	99
6.4	The Construction	102
6.5	Parameterizing the Construction	103
6.6	Consequences	109
6.6.1	A Result on Quotient Spaces	109
6.6.2	Applications	112
6.7	Comments and Remarks	113
7	Strongly Bounded Classes of Banach Spaces	115
7.1	Analytic Classes of Separable Banach Spaces and Schauder Tree Bases	115
7.2	Reflexive Spaces	118

7.3	Spaces with Separable Dual	119
7.4	Non-universal Spaces	121
7.5	Spaces Not Containing a Minimal Space X	123
7.6	Comments and Remarks	125
A	Rank Theory	127
B	Banach Space Theory	137
B.1	Schauder Bases	137
B.2	Operators on Banach Spaces	138
B.3	Interpolation Method	139
B.4	Local Theory of Infinite-Dimensional Banach Spaces	141
B.5	Theorem 6.13: The Radon-Nikodym Property	142
C	The Kuratowski–Tarski Algorithm	149
D	Open Problems	151
	References	155
	Index	159
