Contents

1	Introduction and Outline	1
2	Fourier Analysis	13
2.1	Rapidly Decreasing Functions	13
2.2	Integrable and Square Integrable Functions	17
2.3	Spaces of Weakly Differentiable Functions	20
2.4	Fourier and Laplace Transformation	25
3	The Basics of Quantum Mechanics	27
3.1	Waves, Wave Packets, and Wave Equations	28
3.2	The Schrödinger Equation for a Free Particle	29
3.3	The Mathematical Framework of Quantum Mechanics	32
3.4	The Harmonic Oscillator and Its Eigenfunctions	37
3.5	The Weak Form of the Schrödinger Equation	44
3.6	The Quantum Mechanics of Multi-Particle Systems	46
4	The Electronic Schrödinger Equation	51
4.1	The Hardy Inequality and the Interaction Energy	52
4.2	Spin and the Pauli Principle	55
5	Spectrum and Exponential Decay	59
5.1	The Minimum Energy and the Ionization Threshold	60
5.2	Discrete and Essential Spectrum	61
5.3	The Rayleigh-Ritz Method	71
5.4	The Lower Bound of the Essential Spectrum	78
5.5	The Exponential Decay of the Eigenfunctions	82
6	Existence and Decay of Mixed Derivatives	87
6.1	A Modified Eigenvalue Problem	88
6.2	Spaces of Functions with High-Order Mixed Derivatives	91
6.3	Estimates for the Low-Order Terms, Part 1	93
6.4	Estimates for the Low-Order Terms, Part 2	97

6.5	The Regularity of the Weighted Eigenfunctions.....	103
6.6	Atoms as Model Systems.....	111
6.7	The Exponential Decay of the Mixed Derivatives.....	115
7	Eigenfunction Expansions	117
7.1	Discrete Regularity.....	118
7.2	Antisymmetry	123
7.3	Hyperbolic Cross Spaces	124
8	Convergence Rates and Complexity Bounds	127
8.1	The Growth of the Eigenvalues in the 3d-Case	128
8.2	A Dimension Estimate for Hyperbolic Cross Spaces	131
8.3	An Asymptotic Bound	134
8.4	A Proof of the Estimate for the Partition Numbers.....	135
8.5	The Complexity of the Quantum N-Body Problem	139
9	The Radial-Angular Decomposition	141
9.1	Three-Dimensional Spherical Harmonics.....	142
9.2	The Decomposition of N-Particle Wave Functions.....	151
9.3	The Radial Schrödinger Equation	154
9.4	An Excursus to the Coulomb Problem	159
9.5	The Harmonic Oscillator	162
9.6	Eigenfunction Expansions Revisited	164
9.7	Approximation by Gauss Functions.....	165
9.8	The Effect of Scaling	167
	Appendix: The Standard Basis of the Spherical Harmonics	170
