Athena Scientific, Belmont, Massachusetts

Contents

1. Unconstrained Optimization . . . . . p. 1

1.1. Optimality Conditions . . . . . p. 4
1.1.1. Variational Ideas . . . . . p. 4
1.1.2. Main Optimality Conditions . . . . . p. 13
1.2. Gradient Methods – Convergence . . . . . p. 22
1.2.1. Descent Directions and Stepsize Rules . . . . . p. 22
1.2.2. Convergence Results . . . . . p. 43
1.3. Gradient Methods – Rate of Convergence . . . . . p. 61
1.3.1. The Local Analysis Approach . . . . . p. 63
1.3.2. The Role of the Condition Number . . . . . p. 65
1.3.3. Convergence Rate Results . . . . . p. 75
1.4. Newton's Method and Variations . . . . . p. 88
1.5. Least Squares Problems . . . . . p. 102
1.5.1. The Gauss-Newton Method . . . . . p. 107
1.5.2. Incremental Gradient Methods* . . . . . p. 109
1.5.3. Incremental Forms of the Gauss-Newton Method* . . . . p. 119
1.6. Conjugate Direction Methods . . . . . p. 130
1.7. Quasi-Newton Methods . . . . . p. 148
1.8. Nonderivative Methods . . . . . p. 159
1.8.1. Coordinate Descent . . . . . p. 160
1.8.2. Direct Search Methods . . . . . p. 162
1.9. Discrete-Time Optimal Control Problems* . . . . . p. 166
1.10. Some Practical Guidelines . . . . . p. 183
1.11. Notes and Sources . . . . . p. 187

2. Optimization Over a Convex Set . . . . . p. 191

2.1. Constrained Optimization Problems . . . . . p. 192
2.1.1. Necessary and Sufficient Conditions for Optimality . . . . p. 193
2.1.2. Existence of Optimal Solutions* . . . . . p. 204
2.2. Feasible Directions and the Conditional Gradient Method . . p. 214
2.2.1. Descent Directions and Stepsize Rules . . . . . p. 215
2.2.2. The Conditional Gradient Method . . . . . p. 220

2.3. Gradient Projection Methods . . . . . p. 228
2.3.1. Feasible Directions and Stepsize Rules Based on Projection . . . . . p. 228
2.3.2. Convergence Analysis* . . . . . p. 239
2.4. Two-Metric Projection Methods . . . . . p. 249
2.5. Manifold Suboptimization Methods . . . . . p. 255
2.6. Affine Scaling for Linear Programming . . . . . p. 264
2.7. Block Coordinate Descent Methods* . . . . . p. 272
2.8. Notes and Sources . . . . . p. 278

3. Lagrange Multiplier Theory . . . . . p. 281

3.1. Necessary Conditions for Equality Constraints . . . . . p. 283
3.1.1. The Penalty Approach . . . . . p. 287
3.1.2. The Elimination Approach . . . . . p. 289
3.1.3. The Lagrangian Function . . . . . p. 293
3.2. Sufficient Conditions and Sensitivity Analysis . . . . . p. 302
3.2.1. The Augmented Lagrangian Approach . . . . . p. 303
3.2.2. The Feasible Direction Approach . . . . . p. 305
3.2.3. Sensitivity* . . . . . p. 307
3.3. Inequality Constraints . . . . . p. 313
3.3.1. Karush-Kuhn-Tucker Optimality Conditions . . . . . p. 315
3.3.2. Conversion to the Equality Case* . . . . . p. 318
3.3.3. Second Order Sufficiency Conditions and Sensitivity* . . . p. 320
3.3.4. Sufficiency Conditions and Lagrangian Minimization* . . p. 321
3.3.5. Fritz John Optimality Conditions* . . . . . p. 323
3.3.6. Refinements* . . . . . p. 338
3.4. Linear Constraints and Duality* . . . . . p. 365
3.4.1. Convex Cost Functions and Linear Constraints . . . . . p. 365
3.4.2. Duality Theory: A Simple Form for Linear Constraints . . p. 368
3.5. Notes and Sources . . . . . p. 377

4. Lagrange Multiplier Algorithms . . . . . p. 379

4.1. Barrier and Interior Point Methods . . . . . p. 380
4.1.1. Linear Programming and the Logarithmic Barrier* . . . . p. 383
4.2. Penalty and Augmented Lagrangian Methods . . . . . p. 397
4.2.1. The Quadratic Penalty Function Method . . . . . p. 399
4.2.2. Multiplier Methods – Main Ideas . . . . . p. 408
4.2.3. Convergence Analysis of Multiplier Methods* . . . . . p. 417
4.2.4. Duality and Second Order Multiplier Methods* . . . . . p. 420
4.2.5. The Exponential Method of Multipliers* . . . . . p. 423
4.3. Exact Penalties – Sequential Quadratic Programming* . . . p. 431
4.3.1. Nondifferentiable Exact Penalty Functions . . . . . p. 432
4.3.2. Differentiable Exact Penalty Functions . . . . . p. 448
4.4. Lagrangian and Primal-Dual Interior Point Methods* . . . . p. 455
4.4.1. First-Order Methods . . . . . p. 455

4.4.2. Newton-Like Methods for Equality Constraints . . . . . p. 459
4.4.3. Global Convergence . . . . . p. 469
4.4.4. Primal-Dual Interior Point Methods . . . . . p. 472
4.4.5. Comparison of Various Methods . . . . . p. 480
4.5. Notes and Sources . . . . . p. 482

5. Duality and Convex Programming . . . . . p. 485

5.1. The Dual Problem . . . . . p. 487
5.1.1. Lagrange Multipliers . . . . . p. 488
5.1.2. The Weak Duality Theorem . . . . . p. 493
5.1.3. Characterization of Primal and Dual Optimal Solutions . . p. 498
5.1.4. The Case of an Infeasible or Unbounded Primal Problem . p. 500
5.1.5. Treatment of Equality Constraints . . . . . p. 500
5.1.6. Separable Problems and Their Geometry . . . . . p. 502
5.1.7. Additional Issues About Duality . . . . . p. 506
5.2. Convex Cost – Linear Constraints* . . . . . p. 514
5.3. Convex Cost – Convex Constraints . . . . . p. 520
5.4. Conjugate Functions and Fenchel Duality* . . . . . p. 529
5.4.1. Monotropic Programming Duality . . . . . p. 534
5.4.2. Network Optimization . . . . . p. 537
5.4.3. Games and the Minimax Theorem . . . . . p. 540
5.4.4. The Primal Function . . . . . p. 542
5.4.5. A Dual View of Penalty Methods . . . . . p. 544
5.4.6. The Proximal and Entropy Minimization Algorithms . . . p. 550
5.5. Discrete Optimization and Duality . . . . . p. 568
5.5.1. Examples of Discrete Optimization Problems . . . . . p. 569
5.5.2. Branch-and-Bound . . . . . p. 577
5.5.3. Lagrangian Relaxation . . . . . p. 586
5.6. Notes and Sources . . . . . p. 598

6. Dual Methods . . . . . p. 601

6.1. Dual Derivatives and Subgradients* . . . . . p. 604
6.2. Dual Ascent Methods for Differentiable Dual Problems* . . . p. 610
6.2.1. Coordinate Ascent for Quadratic Programming . . . . . p. 610
6.2.2. Decomposition and Primal Strict Convexity . . . . . p. 613
6.2.3. Partitioning and Dual Strict Concavity . . . . . p. 614
6.3. Nondifferentiable Optimization Methods* . . . . . p. 619
6.3.1. Subgradient Methods . . . . . p. 620
6.3.2. Approximate and Incremental Subgradient Methods . . . p. 625
6.3.3. Cutting Plane Methods . . . . . p. 629
6.3.4. Ascent and Approximate Ascent Methods . . . . . p. 636
6.4. Decomposition Methods* . . . . . p. 650
6.4.1. Lagrangian Relaxation of the Coupling Constraints . . . . p. 651
6.4.2. Decomposition by Right-Hand Side Allocation . . . . . p. 655
