Contents

Preface v

Chapter 1. Dissipative and Maximal Monotone Operators 1
1.1 Duality mapping and directional derivatives of norms 1
1.2 Dissipative operators 9
1.3 Properties of m-dissipative operators 17
1.4 Perturbation results for m-dissipative operators 25
1.5 Maximal monotone operators 32
1.6 Convex functionals and subdifferentials 40

Chapter 2. Linear Semigroups 57
2.1 Examples and basic definitions 57
2.2 Cauchy problems and mild solutions 66
2.3 The Hille–Yosida theorem 74
2.4 The Lumer–Phillips theorem 79
2.5 A second order equation 83

Chapter 3. Analytic Semigroups 89
3.1 Dissipative operators and sesquilinear forms 89
3.2 Analytic semigroups 97

Chapter 4. Approximation of C_0-Semigroups 115
4.1 The Trotter–Kato theorem 115
4.2 Approximation of nonhomogeneous problems 131
4.3 Variational formulations of the Trotter–Kato theorem 135
4.4 An approximation result for analytic semigroups 141

Chapter 5. Nonlinear Semigroups of Contractions 147
5.1 Generation of nonlinear semigroups 147
5.2 Cauchy problems with dissipative operators 153
5.3 The infinitesimal generator 163
5.4 Nonlinear diffusion 175

Chapter 6. Locally Quasi-Dissipative Evolution Equations 181
6.1 Locally quasi-dissipative operators 183
6.2 Assumptions on the operators $A(t)$ 186
6.3 DS-approximations and fundamental estimates 188

6.4 Existence of DS-approximations 202
6.5 Existence and uniqueness of mild solutions 208
6.6 Autonomous problems 229
6.7 "Nonhomogeneous" problems 231
6.8 Strong solutions 238
6.9 Quasi-linear equations 246
6.10 A "parabolic" problem 253

Chapter 7. The Crandall–Pazy Class 263
7.1 The conditions 263
7.2 Existence of an evolution operator 267

Chapter 8. Variational Formulations and Gelfand Triples 285
8.1 Cauchy problems and Gelfand triples 285
8.2 An approximation result 301

Chapter 9. Applications to Concrete Systems 305
9.1 Delay-differential equations 305
9.1.1 Equations of retarded type in the state space C 306
9.1.2 State dependent delays 313
9.1.3 Equations of neutral type 319
9.2 Scalar conservation laws 326
9.2.1 Basic assumptions and preliminaries 326
9.2.2 Globally bounded functions 331
9.2.3 Vanishing viscosity, quasi-dissipativity 333
9.2.4 L^2-considerations 338
9.2.5 L^1- and L^∞-estimates 342
9.2.6 $W^{1,1}$-estimates 347
9.2.7 Uniformity with respect to ν 354
9.2.8 The limit $\nu \downarrow 0$ 361
9.2.9 The limiting operator 378
9.2.10 The general case 385
9.3 The Navier–Stokes equations 386
9.3.1 The two-dimensional case 398
9.3.2 The three-dimensional case 403

Chapter 10. Approximation of Solutions for Evolution Equations 409
10.1 Approximation by approximating evolution problems 409
10.2 Chernoff's theorem 427
10.3 Operator splitting 440

Chapter 11. Semilinear Evolution Equations 447
11.1 Well-posedness 447

11.2 Delay equations with time and state dependent delays 458
11.3 Approximation theory 463
11.4 A concrete approximation scheme for delay systems 469

Appendix 479
A.1 Some inequalities 479
A.2 Convergence of Steklov means 483
A.3 Some technical results needed in Section 9.2 484

Bibliography 489

List of Symbols 493

Index 495
