

Contents

Main definitions and notations	1
Introduction	3
Chapter 1. Finite-difference scheme inversion (FDSI)	9
1.1. Introduction	9
1.2. Volterra operator equations	11
1.3. Definitions and examples	12
1.4. Convergence of FDSI	25
1.5. Numerical examples	29
Chapter 2. Linearized multidimensional inverse problem for the wave equation	37
2.1. Introduction	37
2.2. Problem formulation	37
2.3. Linearization	39
2.4. Analyzing the structure of the solution to one-dimensional direct problem	41
2.5. Existence theorem for the direct problem	45
2.6. Uniqueness of solutions to the inverse problem and regularization	49
2.7. Numerical examples	52

Chapter 3. Methods of I. M. Gel'fand, B. M. Levitan and M. G. Krein	65
3.1. Introduction	65
3.2. Gel'fand-Levitan-Krein (GLK) equation for one-dimensional inverse problem	67
3.3. Multidimensional analog of GLK-equations	70
3.4. Gel'fand-Levitan method for wave equation	73
3.5. Discrete analog of the Gel'fand-Levitan equation	76
3.6. Multidimensional discrete analog	84
3.7. Numerical examples	112
Chapter 4. Boundary control method (BC method)	119
4.1. Introduction. Statement of the problem	119
4.2. BC method in one-dimensional case	120
4.3. BC method for 2D acoustic inverse problem	122
4.4. Numerical examples	129
Chapter 5. Projection method	137
5.1. Introduction	137
5.2. Projection method for solving inverse problem for the wave equation	138
5.3. Projection method for solving inverse acoustic problem	149
5.4. Numerical examples	155
Appendix A	163
Appendix B	167
Bibliography	169
