To the memory of my mother

# Preface

This book grew out of the senior level lecture course I teach at Delft University and which I have taught in recent years at Eindhoven University and the University of Utrecht. Numerous discussions with students and colleagues led me to the conclusion that in spite of the existence of excellent books on the statistical theory of fluids, there is a gap between the fundamental theory and application of its concepts and techniques to practical problems. This book is an attempt to at least partially fill it.

It is not intended to be a thorough and comprehensive review of liquid state theory, which would inevitably require invoking a large number of results without actual derivation. Rather I prefer to focus on the main physical ideas and mathematical methods of fluid theory, starting with the basic principles of statistical mechanics, and present a detailed derivation of results accompanied by an explanation of their physical meaning. The same approach applies to several specialized topics of the liquid state, most of which are recent developments and belong to the areas of my own activities and thus reflect my personal taste. Wherever possible, theoretical predictions are compared with available experimental and simulation data.

So, what you are holding in your hands is neither a textbook nor a monograph, but rather a combination of both. It can be classified as an advanced text for graduate students in physics and chemistry with research interests in the statistical physics of fluids, and as a monograph for a professional audience in various areas of soft condensed matter. It can also be used by industrial scientists for background information, and as an advanced text for self-study.

I gratefully acknowledge the assistance of my colleagues and friends at various stages of the work. Chap. 7 on Monte Carlo methods was written together with Iosif Dyadkin; his vision of the subject and extraordinary general physical intuition guided me for many years. Carlo Luijten placed at my disposal his computer programs for the density functional calculations of surface tension in one-component systems (Sect. 9.3) and binary mixtures (Sect. 13.4.1). I would like to express my gratitude to Jos Thijssen for his careful reading of the manuscript and for a number of very constructive criticisms.

## VIII Preface

In creating the book I benefited greatly from discussions with a number of colleagues. In particular, Rini van Dongen, Bob Evans, Vladimir Filinov, Daan Frenkel, Ken Hamilton, Gert-Jan van Heijst, Jouke Heringa, Geert Hofmans, Simon de Leeuw, Henk Lekkerkerker, Christopher Lowe, Carlo Luijten, Thijs Michels, Bela Mulder, Piet Schram, Berend Smit, Vladimir Vorobiev, and Ben Widom made many helpful comments and suggestions.

Delft, April 2001

# Contents

<b>1. Ensembles in statistical mechanics</b> .....	1
1.1 Notion of a phase space .....	1
1.2 Statistical ensemble and Liouville's theorem .....	5
1.3 Microcanonical ensemble .....	6
1.3.1 Entropy .....	8
1.4 Canonical ensemble .....	11
1.4.1 Legendre transformations .....	19
1.5 Grand canonical ensemble .....	21
1.5.1 Barometric formula .....	24
<b>2. Method of correlation functions</b> .....	29
2.1 $n$ -particle distribution function .....	29
2.2 Calculation of thermal averages .....	30
2.3 $n$ -particle correlation function .....	31
2.4 The structure factor .....	34
<b>3. Equations of state</b> .....	37
3.1 Energy equation .....	37
3.2 Pressure (virial) equation .....	38
3.3 Compressibility equation .....	39
3.4 Thermodynamic consistency .....	41
3.5 Hard spheres .....	41
3.6 Virial expansion .....	44
3.7 Law of corresponding states .....	47
<b>4. Liquid–vapor interface</b> .....	49
4.1 Thermodynamics of the interface .....	49
4.2 Statistical mechanical calculation of surface tension .....	52
4.2.1 Fowler approximation .....	55
<b>5. Perturbation approach</b> .....	57
5.1 General remarks .....	57
5.2 Van der Waals theory .....	57
5.3 First-order perturbation theories .....	62

5.4	Weeks–Chandler–Andersen theory . . . . .	65
5.4.1	Reference model . . . . .	66
5.4.2	Total free energy . . . . .	70
5.5	Song and Mason theory . . . . .	70
5.6	Perturbation approach to surface tension . . . . .	75
5.7	Algebraic method of Ruelle . . . . .	77
<b>6.</b>	<b>Equilibrium phase transitions . . . . .</b>	<b>83</b>
6.1	Classification of phase transitions . . . . .	83
6.2	Phase equilibrium and stability conditions . . . . .	86
6.3	Critical point . . . . .	89
6.4	Universality hypothesis and critical exponents . . . . .	90
6.5	Critical behavior of the van der Waals fluid . . . . .	95
6.6	Landau theory of second-order phase transitions . . . . .	97
<b>7.</b>	<b>Monte Carlo methods . . . . .</b>	<b>103</b>
7.1	Basic principles of Monte Carlo. Original capabilities and typical drawbacks . . . . .	103
7.2	Computer simulation of randomness . . . . .	106
7.2.1	Rejection method . . . . .	109
7.3	Simulation of “observations of random variables” for statistical ensembles . . . . .	112
7.4	Metropolis algorithm for canonical ensemble . . . . .	114
7.5	Simulation of boundary conditions for canonical ensemble . . . . .	116
7.6	Grand ensemble simulation . . . . .	117
7.6.1	Monte Carlo with fictitious particles . . . . .	119
7.7	Simulation of lattice systems . . . . .	125
7.8	Some advanced Monte Carlo techniques . . . . .	128
7.8.1	Superfluous randomness to simulate microcanonical ensemble . . . . .	129
7.8.2	Method of dependent trials – eliminating unnecessary randomness . . . . .	129
<b>8.</b>	<b>Theories of correlation functions . . . . .</b>	<b>133</b>
8.1	General remarks . . . . .	133
8.2	Bogolubov–Born–Green–Kirkwood–Yvon hierarchy . . . . .	133
8.3	Ornstein–Zernike equation . . . . .	137
8.3.1	Formulation and main features . . . . .	137
8.3.2	Closures . . . . .	140
8.3.3	Percus–Yevick theory for hard spheres . . . . .	141

<b>9. Density functional theory</b> .....	151
9.1 Foundations of the density functional theory .....	151
9.1.1 Ideal gas .....	153
9.1.2 General case .....	154
9.2 Intrinsic free energy .....	157
9.3 Surface tension .....	160
9.4 Nonlocal density functional theories .....	163
9.4.1 Weighted-density approximation .....	165
9.4.2 Modified weighted-density approximation .....	166
<b>10. Real gases</b> .....	169
10.1 Fisher droplet model .....	170
10.1.1 Fisher parameters and critical exponents .....	179
<b>11. Surface tension of a curved interface</b> .....	183
11.1 Thermodynamics of a spherical interface .....	183
11.2 Tolman length .....	186
11.3 Semiphenomenological theory of the Tolman length .....	190
<b>12. Polar fluids</b> .....	195
12.1 Algebraic perturbation theory of a polar fluid .....	195
12.2 Dielectric constant .....	199
12.2.1 Extrapolation to arbitrary densities .....	204
12.2.2 Comparison of the algebraic perturbation theory with other models and computer simulations .....	205
<b>13. Mixtures</b> .....	209
13.1 Generalization of basic concepts .....	209
13.2 One-fluid approximation .....	212
13.3 Density functional theory for mixtures .....	213
13.4 Surface tension .....	215
13.4.1 Density functional approach .....	215
13.4.2 One-fluid theory .....	218
<b>14. Ferrofluids</b> .....	223
14.1 Cell model of a ferrofluid .....	224
14.2 Magnetic subsystem in a low field. Algebraic perturbation theory .....	228
14.2.1 Equation of state .....	231
14.3 Magnetic subsystem in an arbitrary field. High-temperature approximation .....	233
14.3.1 Properties of the reference system .....	234
14.3.2 Free energy and magnetostatics .....	234
14.4 Perturbation approach for the solvent .....	237

XII Contents

- A. Empirical correlations for macroscopic properties of argon, benzene and  $n$ -nonane** ..... 239
- B. Angular dipole integrals** ..... 241
- C. De Gennes–Pincus integral** ..... 243
- D. Calculation of  $\gamma_D$  and  $\gamma_\Delta$  in the algebraic perturbation theory** ..... 245
  - D.1 Calculation of  $\gamma_D$  ..... 246
  - D.2 Calculation of  $\gamma_\Delta$  ..... 248
    - D.2.1 Short-range part:  $1 < R < 2$  ..... 248
    - D.2.2 Long-range part:  $2 < R < \infty$  ..... 249
- E. Mixtures of hard spheres** ..... 251
  - E.1 Pressure ..... 251
  - E.2 Chemical potentials ..... 252
- References** ..... 253
- Index** ..... 257
