**Condensing Multivalued Maps  
and  
Semilinear Differential Inclusions  
in Banach Spaces**

Walter de Gruyter · Berlin · New York 2001

# Contents

Introduction	v
<b>1 Multivalued maps: general properties</b>	<b>1</b>
1.1 Continuity of multimaps	2
1.2 Operations on multimaps. Selections and approximations	8
1.2.1 Union and intersection of multimaps	8
1.2.2 Composition and Cartesian product of multimaps	14
1.2.3 Algebraic operations on multimaps	17
1.2.4 Selections and approximations	19
1.3 Measurable multimaps and the superposition multioperator	20
1.3.1 Measurable multimaps and multivalued integral	20
1.3.2 The Carathéodory conditions and the Filippov Implicit Function Lemma	26
1.3.3 The superposition multioperator	28
Bibliographic notes	31
<b>2 Measures of noncompactness and condensing multimaps</b>	<b>33</b>
2.1 Measures of noncompactness	33
2.1.1 Basic notions	33
2.1.2 The expression for the Hausdorff MNC in a separable Banach space	35
2.1.3 MNC in spaces of continuous functions	36
2.2 Condensing multimaps	41
Bibliographic notes	47
<b>3 Topological degree theory for condensing multifields</b>	<b>49</b>
3.1 The relative topological degree and fixed points of compact multimaps	49
3.2 Topological degree for condensing multifields	55
3.2.1 The definition of the degree	55
3.2.2 The relative topological degree for fundamentally restrictible multifields defined on the boundary	57
3.2.3 Topological degree for condensing multifields via compact homotopy approximations	58
3.3 The evaluation of the degree	60
3.3.1 Some fixed point theorems	60

3.3.2	Topological degree of equivariant multifields . . . . .	63
3.4	The topological degree for condensing nonconvex-valued multimaps . . . . .	67
3.4.1	Vietoris pairs and multimaps . . . . .	67
3.4.2	The coincidence index for a Vietoris pair in a finite-dimensional space . . . . .	69
3.4.3	The topological degree for a completely fundamentally restrictible Vietoris multimap . . . . .	70
3.4.4	Remark on single-valued approximations of nonconvex valued multimaps . . . . .	75
3.5	Some properties of the fixed points set . . . . .	77
3.6	Solvability of systems of inclusions with condensing multioperators . . . . .	80
3.6.1	Preliminaries . . . . .	80
3.6.2	Systems of inclusions . . . . .	85
3.6.3	Application: optimal control for a neutral functional differential equation . . . . .	91
	Bibliographic notes . . . . .	97
<b>4</b>	<b>Semigroups and measures of noncompactness</b> . . . . .	<b>99</b>
4.1	Semigroups: general facts . . . . .	99
4.2	Measures of noncompactness in function spaces: measurability and integrability . . . . .	106
4.3	Condensing semigroups . . . . .	117
	Bibliographic notes . . . . .	121
<b>5</b>	<b>Semilinear differential inclusions: initial problem</b> . . . . .	<b>122</b>
5.1	Integral multioperator . . . . .	122
5.2	Existence and continuous dependence theorems . . . . .	129
5.2.1	Local and global existence results. Regularity properties of solutions. Some examples . . . . .	129
5.2.2	Optimization of semilinear feedback control systems . . . . .	139
5.2.3	On the index of the solutions set . . . . .	142
5.2.4	Continuous dependence of the solutions set on parameters and initial data . . . . .	143
5.3	The structure of the solutions set . . . . .	147
5.4	The averaging principle . . . . .	153
5.5	On inclusions with almost lower semicontinuous nonlinearities . . . . .	161
	Bibliographic notes . . . . .	172
<b>6</b>	<b>Semilinear inclusions: periodic problems</b> . . . . .	<b>175</b>
6.1	The integral multioperator for a periodic problem . . . . .	175
6.2	The averaging principle for a periodic problem . . . . .	187
6.3	The translation multioperator . . . . .	197

6.3.1 The translation multioperator along the solutions of semilinear differential inclusions . . . . . 197

6.3.2 Dissipative differential inclusions: periodic solutions and attractors . . . . . 207

Bibliographic notes . . . . . 211

Bibliography . . . . . 213

Index . . . . . 229
