# Contents

	Introduction . . . . .	1
I	Reflection groups . . . . .	5
	1 Euclidean reflection groups . . . . .	6
	1-1 Reflections and reflection groups . . . . .	6
	1-2 Groups of symmetries in the plane . . . . .	8
	1-3 Dihedral groups . . . . .	9
	1-4 Planar reflection groups as dihedral groups . . . . .	12
	1-5 Groups of symmetries in 3-space . . . . .	14
	1-6 Weyl chambers . . . . .	18
	1-7 Invariant theory . . . . .	21
	2 Root systems . . . . .	25
	2-1 Root systems . . . . .	25
	2-2 Examples of root systems . . . . .	29
	2-3 Crystallographic root systems . . . . .	31
	2-4 Essential root systems and stable isomorphisms . . . . .	32
	3 Fundamental systems . . . . .	35
	3-1 Fundamental systems . . . . .	35
	3-2 Examples of fundamental systems . . . . .	36
	3-3 Existence of fundamental systems . . . . .	37
	3-4 Fundamental systems and positive roots . . . . .	40
	3-5 Weyl chambers and fundamental systems . . . . .	41
	3-6 Height . . . . .	43
	4 Length . . . . .	45
	4-1 Fundamental reflections . . . . .	45
	4-2 Length . . . . .	46
	4-3 Length and root systems . . . . .	47
	4-4 Matsumoto cancellation . . . . .	51
	4-5 Length and reflecting hyperplanes . . . . .	53
	4-6 The action of $W(\Delta)$ on fundamental systems and Weyl chambers . . . . .	54
	5 Parabolic subgroups . . . . .	57
	5-1 Parabolic subgroups . . . . .	57
	5-2 Isotropy subgroups . . . . .	60
	5-3 Conjugation of parabolic subgroups . . . . .	63

II	Coxeter groups . . . . .	65
6	Reflection groups and Coxeter systems . . . . .	66
6-1	Coxeter groups and Coxeter systems . . . . .	66
6-2	Reflection groups are Coxeter groups . . . . .	68
6-3	The uniqueness of Coxeter structures . . . . .	72
7	Bilinear forms of Coxeter systems . . . . .	75
7-1	The bilinear form of a Coxeter system . . . . .	75
7-2	The Tits representation . . . . .	76
7-3	Positive definiteness . . . . .	78
8	Classification of Coxeter systems and reflection groups . . . . .	81
8-1	Classification results . . . . .	81
8-2	Preliminary results . . . . .	83
8-3	The two possible cases . . . . .	85
8-4	The chain case . . . . .	87
8-5	The ramification case . . . . .	89
8-6	Coxeter graphs of root systems . . . . .	92
III	Weyl groups . . . . .	97
9	Weyl groups . . . . .	98
9-1	Weyl groups . . . . .	98
9-2	The root lattice $\mathcal{Q}$ . . . . .	100
9-3	Coroots and the coroot lattice $\mathcal{Q}^\vee$ . . . . .	101
9-4	Fundamental weights and the weight lattice $\mathcal{P}$ . . . . .	103
9-5	Equivariant lattices . . . . .	105
10	The Classification of crystallographic root systems . . . . .	109
10-1	Isomorphism of root systems . . . . .	109
10-2	Cartan matrices . . . . .	111
10-3	Angles and ratios of lengths . . . . .	114
10-4	Coxeter graphs and Dynkin diagrams . . . . .	115
10-5	The classification of root systems . . . . .	116
11	Affine Weyl groups . . . . .	118
11-1	The affine Weyl group . . . . .	118
11-2	The highest root . . . . .	119
11-3	Affine Weyl groups as Coxeter groups . . . . .	123
11-4	Affine root systems . . . . .	125
11-5	Alcoves . . . . .	129
11-6	The order of Weyl groups . . . . .	131
12	Subroot systems . . . . .	135
12-1	The Borel-de Siebenthal theorem . . . . .	135
12-2	The subroot system $\Delta(t)$ . . . . .	138
12-3	Maximal subroot systems . . . . .	138
12-4	Characterizations of the root systems $\Delta(t)$ . . . . .	139
12-5	Maximal root systems . . . . .	141
13	Formal identities . . . . .	144
13-1	The Macdonald identity . . . . .	144
13-2	The element $\rho$ . . . . .	145
13-3	The element $\Psi$ . . . . .	147
13-4	The Weyl identity . . . . .	148

13-5	The proof of the MacDonald identity . . . . .	150
13-6	The proof of polynomial identity . . . . .	150
IV	Pseudo-reflection groups . . . . .	153
14	Pseudo-reflections . . . . .	154
14-1	(Generalized) reflections . . . . .	154
14-2	Pseudo-reflections . . . . .	157
14-3	The modular and nonmodular cases . . . . .	158
15	Classifications of pseudo-reflection groups . . . . .	161
15-1	Complex pseudo-reflection groups . . . . .	161
15-2	Other pseudo-reflection groups in characteristic 0 . . . . .	164
15-3	Pseudo-reflection groups in characteristic $p$ . . . . .	165
V	Rings of invariants . . . . .	169
16	The ring of invariants . . . . .	170
16-1	The ring of invariants . . . . .	170
16-2	Examples . . . . .	172
16-3	Extension theory . . . . .	173
16-4	Properties of rings of invariants . . . . .	175
16-5	The Dickson invariants . . . . .	177
17	Poincaré series . . . . .	180
17-1	Poincaré series . . . . .	180
17-2	Molien's theorem . . . . .	181
17-3	Molien's theorem and pseudo-reflections . . . . .	185
17-4	Polynomial algebras as rings of invariants . . . . .	187
17-5	The algebra of covariants . . . . .	188
18	Nonmodular invariants of pseudo-reflection groups . . . . .	191
18-1	The main result . . . . .	191
18-2	The $\Delta$ operators . . . . .	192
18-3	$S$ as a free $R$ module . . . . .	194
18-4	$R$ as a polynomial algebra . . . . .	195
18-5	$G$ as a pseudo-reflection group . . . . .	199
18-6	Invariants of Euclidean reflection groups . . . . .	200
19	Modular invariants of pseudo-reflection groups . . . . .	202
19-1	Polynomial rings of invariants . . . . .	202
19-2	Generalized invariants . . . . .	207
19-3	Regular sequences . . . . .	209
VI	Skew invariants . . . . .	213
20	Skew invariants . . . . .	214
20-1	Skew invariants . . . . .	214
20-2	The element $\Omega$ . . . . .	215
20-3	The ring of covariants . . . . .	219
21	The Jacobian . . . . .	221
21-1	The Jacobian . . . . .	221
21-2	The proof of Proposition A . . . . .	222
21-3	The proof of Proposition B . . . . .	223
21-4	Extended partial derivatives . . . . .	224
21-5	The chain rule . . . . .	226

22	The extended ring of invariants . . . . .	229
22-1	Exterior algebras . . . . .	229
22-2	The differential $d: S(V) \otimes E(V) \rightarrow S(V) \otimes E(V)$ . . . . .	230
22-3	Invariants of $S(V) \otimes E(V)$ . . . . .	232
22-4	The Poincaré series of $[S(V) \otimes E(V)]^G$ . . . . .	234
VII	Rings of covariants . . . . .	235
23	Poincaré series for the ring of covariants . . . . .	236
23-1	Poincaré series . . . . .	236
23-2	The exponents of Weyl groups . . . . .	237
23-3	The $\Delta$ operations . . . . .	239
23-4	The element $\omega_0$ . . . . .	241
23-5	The proof of Proposition 23-3 . . . . .	243
24	Representations of pseudo-reflection groups . . . . .	247
24-1	$S_G$ as the regular representation . . . . .	247
24-2	The Poincaré series of irreducible representations . . . . .	248
24-3	Exterior powers of reflection representation . . . . .	250
24-4	MacDonald representations . . . . .	254
25	Harmonic elements . . . . .	256
25-1	Hopf algebras . . . . .	256
25-2	Differential operators . . . . .	258
25-3	Group actions . . . . .	260
25-4	Harmonic elements . . . . .	261
26	Harmonics and reflection groups . . . . .	263
26-1	Main results . . . . .	263
26-2	Harmonics of pseudo-reflection groups are cyclic . . . . .	264
26-3	Generalized harmonics . . . . .	267
26-4	Cyclic harmonics . . . . .	270
26-5	Pseudo-reflection groups are characterized via harmonics	274
26-6	Isotropy subgroups . . . . .	277
26-7	Poincaré duality . . . . .	278
VIII	Conjugacy classes . . . . .	279
27	Involutions . . . . .	280
27-1	Elements of greatest length . . . . .	280
27-2	The involution $c = -1$ . . . . .	283
27-3	The involutions $c_I$ . . . . .	283
27-4	Conjugacy classes of involutions . . . . .	286
27-5	Conjugacy classes and Coxeter graphs . . . . .	288
28	Elementary equivalences . . . . .	290
28-1	Summary . . . . .	290
28-2	Equivalences via Coxeter graph symmetries . . . . .	291
28-3	Elementary equivalences . . . . .	292
28-4	Decomposition of $W$ equivalences into elementary equivalences . . . . .	293
28-5	Involutions . . . . .	295
29	Coxeter elements . . . . .	299
29-1	Coxeter elements . . . . .	299

29-2	Coxeter elements are conjugate . . . . .	300
29-3	A dihedral subgroup . . . . .	302
29-4	The order of Coxeter elements . . . . .	306
29-5	Centralizers of Coxeter elements . . . . .	307
29-6	Regular elements . . . . .	309
30	Minimal decompositions . . . . .	311
30-1	Main results . . . . .	311
30-2	The proof of Propositions 30-1A and 30-1B . . . . .	313
30-3	The proof of Theorem 30-1A . . . . .	315
30-4	The proof of Theorem 30-1B . . . . .	317
IX	Eigenvalues . . . . .	319
31	Eigenvalues for reflection groups . . . . .	320
31-1	Eigenspaces and exponents . . . . .	320
31-2	The proof of Theorem A . . . . .	322
31-3	The proof of Theorem B . . . . .	323
32	Eigenvalues for regular elements . . . . .	325
32-1	Regular elements . . . . .	325
32-2	Eigenvalues of regular elements . . . . .	327
32-3	The proof of Theorem 32-1A . . . . .	329
32-4	Eigenvalues in Euclidean reflection groups . . . . .	330
33	Ring of invariants and eigenvalues . . . . .	334
33-1	Main results . . . . .	334
33-2	Algebraic geometry . . . . .	335
33-3	The ring of invariants as a coordinate ring . . . . .	336
33-4	Eigenspaces . . . . .	338
34	Properties of regular elements . . . . .	341
34-1	Properties of regular elements . . . . .	341
34-2	Conjugacy classes of regular elements . . . . .	343
34-3	Conjugacy classes of regular elements in Weyl groups . . . . .	345
34-4	Centralizers of regular elements . . . . .	346
Appendices		
A	Rings and modules . . . . .	350
B	Group actions and representation theory . . . . .	354
C	Quadratic forms . . . . .	361
D	Lie algebras . . . . .	366
References	. . . . .	369
Index	. . . . .	377
