Preface	v
Notation	vi
Introduction	vii

Chapter I

The definition and the simplest properties of the Riemann zeta-function

§1. Definition of $\zeta(s)$	1
§2. Generalizations of $\zeta(s)$	3
§3. The functional equation of $\zeta(s)$	5
1. The theta-series and its properties	5
2. Expression for the zeta-function in terms of the theta-series	8
§4. Functional Equations for $L(s, \chi)$ and $\zeta(s, \alpha)$	11
1. Analytic continuation of $L(s, \chi)$ to the region $\operatorname{Re} s > 0$	11
2. Functional equation for $\theta(\tau, \chi)$	12
3. Functional equation for $L(s, \chi)$	14
4. Analytic continuation of $\zeta(s, \alpha)$ to the region $\operatorname{Re} s > 0$	16
5. Functional equation for $\zeta(s, \alpha)$	17
§5. Weierstrass product for $\zeta(s)$ and $L(s, \chi)$	20
§6. The simplest theorems concerning the zeros of $\zeta(s)$	21
1. Consequences of the functional equation for $\zeta(s)$	21
2. The theorem of de la Vallée-Poussin bounding the zeros of $\zeta(s)$	25
§7. The simplest theorems concerning the zeros of $L(s, \chi)$	28
1. Consequences of the functional equation for $L(s, \chi)$	28
2. A de la Vallée-Poussin theorem for the zeros of $L(s, \chi)$	32
3. Page's theorems	35
§8. Asymptotic formula for $N(T)$	39
Remarks on Chapter I	41

Chapter II

The Riemann zeta-function as a generating function in number theory

§1. The Dirichlet series associated with the Riemann ζ -function	43
1. The function $\tau(n)$	43
2. The Euler function $\varphi(n)$	45

§2. The connection between the Riemann zeta-function and the Möbius function	45
1. The Möbius inversion formula	45
2. Some other formulas	47
§3. The connection between the Riemann zeta-function and the distribution of prime numbers	49
§4. Explicit formulas	51
1. Expression for $\psi(x)$ in terms of the zeros of $\zeta(s)$	51
2. Expression for $\psi(x, \chi)$ in terms of the zeros of $L(s, \chi)$	53
3. Selberg's formula	55
§5. Prime number theorems	56
§6. The Riemann zeta-function and small sieve identities	60
Remarks on Chapter II	63

Chapter III

Approximate functional equations

§1. Replacing a trigonometric sum by a shorter sum	64
1. Statement of the fundamental theorem	65
2. Reducing trigonometric sums to trigonometric integrals	65
3. Asymptotic value of a special type of trigonometric integral	71
4. Proof of Theorem 1	76
§2. A simple approximate functional equation for $\zeta(s, \alpha)$	78
§3. Approximate functional equation for $\zeta(s)$	81
§4. Approximate functional equation for the Hardy function $Z(t)$ and its derivatives	85
1. The zeros of $Z(t)$	85
2. A formula for $\theta(t)$	85
3. Formula for $Z^{(k)}(t)$	87
§5. Approximate functional equation for the Hardy–Selberg function $F(t)$	95
Remarks on Chapter III	100

Chapter IV

Vinogradov's method in the theory of the Riemann zeta-function

§1. Vinogradov's mean value theorem	101
1. Lemma on the distribution of prime numbers	101
2. Linnik's lemma	104
3. Recurrence formula for $J(P; n, k)$	106
4. Statement and proof of the mean value theorem	110
§2. A bound for zeta sums, and some corollaries	112
1. Auxiliary lemmas	112

2. Estimate for a zeta sum	113
3. A bound for $\zeta(s)$ for $\operatorname{Re} s < 1$	116
4. A bound for $ \zeta(s) $ in a neighborhood of the line $\operatorname{Re} s = 1$	117
§3. Zero-free region for $\zeta(s)$	119
§4. The multidimensional Dirichlet divisor problem	120
Remarks on Chapter IV	123

Chapter V

Density theorems

§1. Preliminary estimates	126
§2. A simple bound for $N(\sigma, T)$	128
§3. A modern estimate for $N(\sigma, T)$	131
1. The first case of $S(\rho)$	134
2. The second case of $S(\rho)$	146
§4. Density theorems and primes in short intervals	148
§5. Zeros of $\zeta(s)$ in a neighborhood of the critical line	150
1. Preliminary facts about summation of arithmetic functions	150
2. Estimate for a multiple trigonometric sum	154
3. Upper bound for the number of zeros of $\zeta(s)$ near the critical line	158
§6. Connection between the distribution of zeros of $\zeta(s)$ and bounds on $ \zeta(s) $. The Lindelöf conjecture and the density conjecture	161
Remarks on Chapter V	166

Chapter VI

Zeros of the zeta-function on the critical line

§1. Distance between consecutive zeros on the critical line	168
§2. Distance between consecutive zeros of $Z^{(k)}(t)$, $k \geq 1$	176
§3. Selberg's conjecture on zeros in short intervals of the critical line	179
§4. Distribution of the zeros of $\zeta(s)$ on the critical line	200
§5. Zeros of a function similar to $\zeta(s)$ which does not satisfy the Riemann Hypothesis	212
1. The case $1/2 < \operatorname{Re} s < 1$	214
2. The case $\operatorname{Re} s = 1/2$	215
Remarks on Chapter VI	239

Chapter VII

Distribution of nonzero values of the Riemann zeta-function

§1. Universality theorem for the Riemann zeta-function	241
§2. Differential independence of $\zeta(s)$	252

§3. Distribution of nonzero values of Dirichlet L -functions	255
1. Preliminary lemmas	255
2. Theorem on shifts of Dirichlet L -functions	268
3. Theorems on shifts of zeta-functions of number fields	268
4. Independence of Dirichlet L -functions	269
5. The zeros of $\zeta(s, \alpha)$	271
§4. Zeros of the zeta-functions of quadratic forms	272
1. Basic lemmas	273
2. Joint distribution of values of Hecke L -functions	279
3. Zeros of the zeta-functions of quadratic forms	283
Remarks on Chapter VII	284

Chapter VIII

Ω -theorems

§1. Behavior of $ \zeta(\sigma + it) $, $\sigma > 1$	286
§2. Ω -theorems for $\zeta(s)$ in the critical strip	290
§3. Multidimensional Ω -theorems	305
1. Statement of the theorems	305
Remarks on Chapter VIII	324

Appendix

§1. Abel summation (partial summation)	326
§2. Some facts from analytic function theory	327
§3. Euler's gamma-function	338
§4. General properties of Dirichlet series	344
§5. Inversion formula	347
§6. Theorem on conditionally convergent series in a Hilbert space	352
§7. Some inequalities	358
§8. The Kronecker and Dirichlet approximation theorems	359
§9. Facts from elementary number theory	364
§10. Some number theoretic inequalities	372
§11. Bounds for trigonometric sums (following van der Corput)	375
§12. Some algebra facts	380
§13. Gabriel's inequality	381
Bibliography	385
Index	395
