Nonlinear Functional Analysis
A First Course

S. Kesavan
Institute of Mathematical Sciences
Chennai

HINDUSTAN
BOOK AGENCY

Contents

1 Differential Calculus on Normed Linear Spaces **1**

1.1 The Fréchet Derivative 1

1.2 Higher Order Derivatives 16

1.3 Some Important Theorems 22

1.4 Extrema of Real Valued Functions 29

2 The Brouwer Degree **36**

2.1 Definition of the Degree 36

2.2 Properties of the Degree 45

2.3 Brouwer's Theorem and Applications 50

2.4 Borsuk's Theorem 57

2.5 The Genus 63

3 The Leray - Schauder Degree **69**

3.1 Preliminaries 69

3.2 Definition of the Degree 72

3.3 Properties of the Degree 74

3.4 Fixed Point Theorems 78

3.5 The Index 82

3.6 An Application to Differential Equations 87

4 Bifurcation Theory **92**

4.1 Introduction 92

4.2 The Lyapunov - Schmidt Method 97

4.3 Morse's Lemma 99

4.4 A Perturbation Method 107

4.5 Krasnoselski's Theorem 111
4.6 Rabinowitz' Theorem 113
4.7 A Variational Method 117

5 Critical Points of Functionals **125**
5.1 Minimization of Functionals 125
5.2 Saddle Points 132
5.3 The Palais - Smale Condition 137
5.4 The Deformation Lemma 144
5.5 The Mountain Pass Theorem 150
5.6 Multiplicity of Critical Points 155
5.7 Critical Points with Constraints 159

Bibliography **171**

Index **175**
