Contents

Preface **xi**

1 Basic Notions **1**
1.1 Sets 1
1.2 Sequences and Tuples 5
1.3 Functions, Relations, Operations 6
1.4 Equivalence Relations 11
1.5 Linearly Ordered Sets 14
1.6 Partially Ordered Sets 17
1.7 Graphs 19
1.8 Induction 24
1.9 Trees and König's Lemma 27
1.10 Countable and Uncountable Sets 30
1.10.1 Countable Sets. 32
1.10.2 Diagonalization and Uncountable Sets. 35
1.11 Algorithms 36

2 Finite Automata **39**
2.1 Two Examples 40
2.1.1 The Consumer–Producer Problem. 40
2.1.2 A Monkey and Banana Problem. 42
2.2 Finite Automata 46

2.2.1 Definition of Finite Automata and Languages. 46
2.2.2 Runs (Computations) of Finite Automata. 50
2.2.3 Accessibility and Recognizability. 56
2.3 Closure Properties 58
2.3.1 Union and Intersection. 58
2.3.2 Complementation and Nondeterminism. 62
2.3.3 On the Exponential Blow-Up of Complementation. 66
2.3.4 Some Other Operations. 67
2.3.5 Projections of Languages. 70
2.4 The Myhill–Nerode Theorem 72
2.5 The Kleene Theorem 76
2.5.1 Regular Languages. 76
2.5.2 Regular Expressions. 79
2.5.3 The Kleene Theorem. 81
2.6 Generalized Finite Automata 85
2.7 The Pumping Lemma and Decidability 93
2.7.1 Basic Problems. 93
2.7.2 The Pumping Lemma. 93
2.7.3 Decidability. 95
2.8 Relations and Finite Automata 97
2.9 Finite Automata with Equations 101
2.9.1 Preliminaries. 101
2.9.2 Properties of E-Languages. 103
2.10 Monadic Second Order Logic of Strings 105
2.10.1 Finite Chains. 105
2.10.2 The Monadic Second Order Logic of Strings. 106
2.10.3 Satisfiability. 109
2.10.4 Discussion and Plan About SFS. 111
2.10.5 From Automata to Formulas. 112
2.10.6 From Formulas to Automata. 117

3 Büchi Automata **121**
3.1 Two Examples 122
3.1.1 The Dining Philosophers Problem. 123
3.1.2 Consumer–Producer Problem Revisited. 125
3.2 Büchi Automata 127
3.2.1 Basic Notions. 128
3.2.2 Union, Intersection, and Projection. 139
3.3 The Büchi Theorem 143
3.3.1 Auxiliary Results. 143
3.3.2 Büchi's Characterization. 147
3.4 Complementation for Büchi Automata 150
3.4.1 Basic Notations. 150

3.4.2 Congruence $\sim$. 151
3.5 The Complementation Theorem 154
3.6 Determinism 160
3.7 Müller Automata 162
3.7.1 Motivation and Definition. 163
3.7.2 Properties of Müller Automata. 167
3.7.3 Sequential Rabin Automata. 170
3.8 The McNaughton Theorem 175
3.8.1 Flag Points. 175
3.8.2 The Theorem. 179
3.9 Decidability 184
3.10 Büchi Automata and the Successor Function 187
3.10.1 ω-Strings as Structures. 187
3.10.2 Monadic Second Order Formalism. 189
3.10.3 Satisfiability. 191
3.10.4 From Büchi Automata to Formulas. 194
3.10.5 From Formulas to Büchi Automata. 198
3.10.6 Decidability and Definability in $S1S$. 201
3.11 An Application of the McNaughton Theorem 202

4 Games Played on Finite Graphs **209**
4.1 Introduction 209
4.2 Finite Games 210
4.2.1 Informal Description. 210
4.2.2 Definition of Finite Games and Examples. 212
4.2.3 Finding The Winners. 215
4.3 Infinite Games 218
4.3.1 Informal Description and an Example. 218
4.3.2 Formal Definition of Games. 220
4.3.3 Strategies. 222
4.4 Update Games and Update Networks 224
4.4.1 Update Games and Examples. 225
4.4.2 Deciding Update Networks. 226
4.5 Solving Games 231
4.5.1 Forgetful Strategies. 231
4.5.2 Constructing Forgetful Strategies. 236
4.5.3 No-Memory Forcing Strategies. 239
4.5.4 Finding Winning Forgetful Strategies. 243

5 Rabin Automata **249**
5.1 Rabin Automata 250
5.1.1 Union, Intersection, and Projection. 259
5.2 Special Automata 262

5.2.1 Basic Properties of Special Automata. 263
5.2.2 A Counterexample to Complementation. 265
5.3 Game Automata 270
5.3.1 What Is a Game? 270
5.3.2 Game Automata. 272
5.3.3 Strategies. 274
5.4 Equivalence of Rabin and Game Automata 276
5.5 Terminology: Arenas, Games, and Strategies 281
5.6 The Notion of Rank 287
5.7 Open Games 290
5.8 Congruence Relations 292
5.9 Sewing Theorem 295
5.10 Can Mr. (ϵ) Visit C Infinitely Often? 300
5.10.1 Determinacy Theorem for Games (Ω, $[C]$, ϵ). 301
5.10.2 An Example of More Complex Games. 304
5.11 The Determinacy Theorem 306
5.11.1 GH-Games and Last Visitation Record. 306
5.11.2 The Restricted Memory Determinacy Theorem. 308
5.12 Complementation and Decidability 318
5.12.1 Forgetful Determinacy Theorem. 318
5.12.2 Solution of the Complementation Problem. 319
5.12.3 Decidability. 327

6 Applications of Rabin Automata **329**
6.1 Structures and Types 330
6.2 The Monadic Second Order Language 333
6.3 Satisfiability and Theories 336
6.4 Isomorphisms 338
6.5 Definability in $\mathcal{T}$ and Decidability of $S2S$ 339
6.5.1 Σ-Valued Trees as Structures. 340
6.5.2 Definable Relations. 341
6.5.3 From Rabin Automata to Formulas. 343
6.5.4 From Formulas to Rabin Automata. 346
6.5.5 Definability and Decidability. 349
6.6 The Structure with ω Successors 350
6.7 Applications to Linearly Ordered Sets 354
6.7.1 Two Algebraic Facts. 354
6.7.2 Decidability. 358
6.8 Application to Unary Algebras 361
6.8.1 Unary Structures. 361
6.8.2 Enveloping Algebras. 363
6.8.3 Decidability. 365
6.9 Applications to Cantor's Discontinuum 369

6.9.1 A Brief Excursion to Cantor's Discontinuum. 369
6.9.2 Cantor's Discontinuum as a Topological Space. 372
6.9.3 Expressing Subsets of *CD* in *S2S*. 374
6.9.4 Decidability Results. 378
6.10 Application to Boolean Algebras 382
6.10.1 A Brief Excursion into Boolean Algebras. 382
6.10.2 Ideals, Factors, and Subalgebras of Boolean Algebras. . . 385
6.10.3 Maximal Ideals of Boolean Algebras. 388
6.10.4 The Stone Representation Theorem. 390
6.10.5 Homomorphisms of Boolean Algebras. 392
6.10.6 Decidability Results. 397

Bibliography **403**
