Preface

These notes are a collection of papers presented at the International Conference on Functional Analysis and Related Topics, 1991, held at the Research Institute for Mathematical Sciences, Kyoto University, Japan, on July 29 - August 2, 1991. Approximately 180 mathematicians from 7 countries attended the conference.

The conference was organized by the Research Institute for Mathematical Sciences as a special conference of the institute, and supported by the ICM-90 Commemorative Meeting Fund of the Mathematical Society of Japan, and by the Inoue Foundation. It was held in memory of Professor Kôsaku Yosida who passed away a year before, on June 20, 1990 after a short illness. The Organizing Committee, consisting of M. Sato, H. Fujita, Y. Kômura and H. Komatsu, invited 27 speakers who carry on Professor Yosida's research tradition.

As the attached list of publications shows, Professor Yosida had a very wide interest in analysis, and guided many students, not only through personal contact but also through his numerous books, including his famous textbook "Functional Analysis" of which six distinct editions appeared. His collected works in English will soon be published by Springer Verlag.

In 1969 an international conference of the same title was held in Tokyo on the occasion of his 60th anniversary. It covered Partial Differential Equations, Differential Equations on Manifolds, Hyperfunctions, Markov Processes and Potentials, and Ergodic Theory. This time the range of topics is more restricted, but we hope that some of these topics have deepened considerably since then. Professor Yosida was essentially a theorist but he always had applications in mind. Whenever he created a beautiful abstract theory, he was also the first to apply it to more concrete problems. The organizers of the conference will be delighted if the reader would recognize this flavor in the following pages.

A priori estimates for some nonlinear parabolic equations via Lyapunov functions MITSUHARU ÔTANI	319
Remarks on recurrence criteria for processes of Ornstein-Uhlenbeck type KEN-ITI SATO AND MAKOTO YAMAZATO	329
Some remarks about singular perturbed solutions for Emden-Fowler equation with exponential nonlinearity TAKASHI SUZUKI	341
Fully discrete approximation of a second order linear evolution equation related to the water wave problem TERUO USHIJIMA AND MIHOKO MATSUKI	361
A counterexample concerning imaginary powers of linear operators ALBERTO VENNI	381
Global solution to some quasilinear parabolic problem in mathematical biology ATSUSHI YAGI	389
Quasilinear geometric optics approximation ATSUSHI YOSHIKAWA	403

Program

July 29 (Monday)

- 11:00 - 12:00 Jacques-Louis Lions (Collège de France)*
Distributed systems with incomplete data and uniqueness theorems
13:30 - 14:25 Kiyosi Itô (Kyoto Univ.)
Semigroups in probability theory
14:30 - 15:25 Daisuke Fujiwara (Tokyo Inst. of Tech.)
Some Feynman path integrals as oscillatory integrals over a Sobolev space
15:30 - 16:25 Hikosaburo Komatsu (Univ. of Tokyo)
Operational calculus and semigroups of operators
16:30 - 16:45 Donation of the Yosida Library
17:30 - Reception at Kyodai Kaikan

July 30 (Tuesday)

- 9:50 - 10:50 Haïm Brezis (Univ. of Paris VI)
Mathematical problems of liquid crystals
11:00 - 12:00 Yukio Kōmura - Kiyoko Furuya (Ochanomizu Univ.)
Wave equations in non-reflexive spaces
13:30 - 14:25 Ken-iti Sato (Nagoya Univ.)
Stochastic processes of Ornstein-Uhlenbeck type on Euclidean spaces
14:30 - 15:25 Takashi Suzuki (Tokyo Metropolitan Univ.)
Symmetry breaking: a variational approach
15:30 - 16:25 Hisashi Okamoto (RIMS, Kyoto Univ.)
Computer-assisted analysis of 2D Navier-Stokes equations
16:30 - 17:00 Yasuyuki Kawahigashi (Univ. of Tokyo)
Solvability of orbifold models and operator algebras

July 31 (Wednesday)

- 9:50 - 10:50 Tosio Kato (Univ. of California, Berkeley)
Abstract evolution equations, linear and quasilinear, revisited
11:00 - 12:00 Alberto Venni (Univ. of Bologna)
Complex powers of operators and related problems of operator theory
13:30 - 14:25 Yoshikazu Giga (Hokkaido Univ.)
 L^p estimates for the Navier-Stokes system
14:30 - 15:25 Hitoshi Kitada (Univ. of Tokyo)
Completeness of N -body wave operators — long-range quantum systems
15:30 - 16:25 Minoru Murata (Kumamoto Univ.)
Nonnegative solutions of linear parabolic equations

16:30 - 17:00 Teruo Ushijima - Mihoko Matsuki (Univ. of Electro-Communications)
 Fully discrete approximation of a second order linear evolution equation related to
 the water wave problem

August 1 (Thursday)

9:50 - 10:50 P. P. Narayanaswami (Memorial Univ. of Newfoundland)
 The separable quotient problem for Banach and (LF)-spaces
 11:00 - 12:00 D. C. Struppa (Univ. of Calabria) - T. Kawai (RIMS, Kyoto Univ.)
 Interpolating varieties and the Fabry-Ehrenpreis-Kawai gap theorem
 13:30 - 14:25 Shinnosuke Oharu (Hiroshima Univ.)
 Characterization of nonlinearly perturbed semigroups
 14:30 - 15:25 Yoshikazu Kobayashi (Niigata Univ.)
 Semigroups of locally Lipschitzian operators and applications
 15:30 - 16:25 Mitsuharu Otani (Waseda Univ.)
 A priori estimates for some nonlinear parabolic equations via Lyapunov functions
 16:30 - 17:00 Hiroko Morimoto (Meiji Univ.)
 Asymptotic behavior of solutions of the convection equation

August 2 (Friday)

9:50 - 10:50 Philippe Clément (Delft Univ. of Technology)
 Maximal regularity $L^p - L^q$ for a class of integro-differential equations
 11:00 - 12:00 Giovanni Dore (Univ. of Bologna)
 L^p -regularity for abstract differential equations
 13:30 - 14:25 Atsushi Yoshikawa (Kyushu Univ.)
 Quasilinear oscillations and geometric optics
 14:30 - 15:25 Atsushi Yagi (Himeji Inst. of Tech.)
 Global solution to some quasilinear parabolic system in mathematical biology
 15:30 - 16:25 Shigetake Matsuura (RIMS, Kyoto Univ.)
 On non-convex curves of constant angle
