Contents

Foreword V

Introduction 1
0.1 What Is This Book About? 1
0.2 Now, What Is This Book *Really* About? 2
0.3 What Is This Book *Not* About? 4
0.4 Are There any Applications of This Theory? 5
0.5 How Was This Book Written? 5
0.6 What Is a Tutorial? 7
0.7 What Is CoCoA? 7
0.8 And What Is This Book Good for? 8
0.9 Some Final Words of Wisdom 9

4. The Homogeneous Case 11
4.1 Polynomial Rings Graded by Matrices 15
4.1.A Gradings by Matrices 16
4.1.B Graded Modules 20
4.1.C Gradings of Positive Type 23
Tutorial 45. Homogeneous Maps and Toric Ideals 29
Tutorial 46. Projective Varieties 30
4.2 Degree Forms and Macaulay Bases 32
4.2.A Positive Gradings 33
4.2.B Macaulay Bases 36
Tutorial 47. Computation of Macaulay Bases 40
Tutorial 48. Characterizations of Macaulay Bases 42
4.3 Homogenization 44
4.3.A Homogenization of Polynomials and Ideals 45
4.3.B Macaulay Bases and Homogenization 55
Tutorial 49. Homogenization of Modules 60
Tutorial 50. The Homogeneous Part of an Ideal 63
Tutorial 51. Implicitization and Homogenization 64
Tutorial 52. Projective Closure 66
4.4 Term Orderings of DegRev Type 68
Tutorial 53. Reduced Gröbner Bases and Homogenization 78

Tutorial 54. Regular Sequences of Indeterminates 80
Tutorial 55. Set-Theoretic Complete Intersections 82
4.5 Homogeneous Gröbner Bases 85
4.5.A The Homogeneous Buchberger Algorithm 87
4.5.B Truncated Gröbner Bases 92
Tutorial 56. Computation of Homogeneous Gröbner Bases 96
Tutorial 57. Some Applications of Truncated Gröbner Bases . . . 98
4.6 Minimal Homogeneous Systems of Generators 100
Tutorial 58. Computing Some Minimal Systems of Generators . . 110
Tutorial 59. Optimizing the Homogeneous Buchberger Algorithm 111
4.7 Minimal Homogeneous Presentations 116
4.7.A Existence and Uniqueness of Minimal Presentations . . 117
4.7.B Idealization of Graded Modules and Presentations 123
4.7.C Computation of Minimal Homogeneous Presentations . 130
Tutorial 60. Computing Some Idealizations 143
Tutorial 61. Computing Some Minimal Presentations 144
4.8 Minimal Graded Free Resolutions 147
4.8.A Existence and Uniqueness of Minimal Free Resolutions 148
4.8.B Computation of Minimal Graded Free Resolutions . . . 154
Tutorial 62. The Hilbert-Burch Theorem 167
Tutorial 63. Computing Some Graded Betti Numbers 169

5. Hilbert Functions 173
5.1 Basic Properties of Hilbert Functions 179
5.1.A Integer Functions of Polynomial Type 180
5.1.B Hilbert Functions in the Standard Graded Case 185
Tutorial 64. Hilbert Functions and Graded Free Resolutions 191
5.2 Hilbert Series 194
5.2.A Univariate Power Series 195
5.2.B Hilbert Series in the Standard Graded Case 202
Tutorial 65. Knight Moves 205
Tutorial 66. Veronese Subrings 209
Tutorial 67. Powers of Polynomials and Ehrhart Functions 210
5.3 Computation of Hilbert Series 214
Tutorial 68. Implementation of the Hilbert Series Algorithm . . . 226
Tutorial 69. Hilbert Driven Gröbner Basis Computations I 228
5.4 Dimension, Multiplicity, and Hilbert Polynomials 232
5.4.A Dimension and Multiplicity of Standard Algebras 233
5.4.B Hilbert Polynomials in the Standard Graded Case 239
Tutorial 70. Computing the Dimension of a Module 243
Tutorial 71. Chess Puzzles 244
Tutorial 72. Photogrammetry 247
5.5 Bounds for Hilbert Functions 252
5.5.A Binomial Representations 254
5.5.B Lex-Segment Spaces and Ideals 258

5.5.C The Theorems of Macaulay and Green 262
Tutorial 73. Operations on Binomial Representations 271
Tutorial 74. Bounds for Minimal Generators 273
Tutorial 75. Gin for the Strongly Stable 274
5.6 Affine Hilbert Functions and Krull Dimension 278
5.6.A The Hilbert Function of an Affine Algebra 279
5.6.B Primary Decomposition in Noetherian Rings 284
5.6.C The Krull Dimension of an Affine Algebra 291
Tutorial 76. The Multiplicity of an Affine Algebra 297
Tutorial 77. Primary Decomposition of Monomial Ideals 298
5.7 Independent Sets of Indeterminates 301
5.7.A The Combinatorial Dimension of an Affine Algebra . . . 301
5.7.B Transcendence Degrees 308
Tutorial 78. Noether Normalization 312
Tutorial 79. Primary Decompositions II 315
5.8 General Hilbert Functions 321
5.8.A Rings of Multivariate Laurent Series 323
5.8.B Hilbert Functions in the General Case 325
5.8.C Change of Gradings 332
Tutorial 80. Hilbert Driven Gröbner Basis Computations II 335
Tutorial 81. Rees Rings 339
Tutorial 82. Segre Products and Hadamard Series 341
Tutorial 83. A Toy Example 344

6. Further Applications 347
6.1 Toric Ideals and Hilbert Bases 351
6.1.A Toric Ideals 352
6.1.B Hilbert Bases 358
Tutorial 84. Magic Squares 367
Tutorial 85. Computing the Gaps 370
Tutorial 86. Matrices of Positive Type 372
6.2 Liftings of Ideals and Distractions 375
Tutorial 87. SuperG Bases 384
6.3 Finite Sets of Points 387
6.3.A Affine Point Sets 389
6.3.B Projective Point Sets 395
6.3.C Hilbert Functions of Points 404
Tutorial 88. The Cayley-Bacharach Property 408
Tutorial 89. Generic Sets of Points 411
Tutorial 90. Error-Correcting Codes 415
6.4 Border Bases 419
6.4.A Existence and Uniqueness of Border Bases 421
6.4.B Characterizations of Border Bases 430
Tutorial 91. Module Structures on Vector Spaces 442
Tutorial 92. Design of Experiments 447

6.5 Filtrations 453
6.5.1 General Filtrations 454
6.5.B Adic Filtrations and Tangent Cones 460
Tutorial 93. Mora's Algorithm 465
Tutorial 94. Hilbert Functions of Primary Ideals 470
Tutorial 95. Singularities 472
6.6 SAGBI Bases 477
6.6.A Definition and Basic Properties of SAGBI Bases 478
6.6.B Characterization of SAGBI Bases 486
6.6.C Computation of SAGBI Bases 494
Tutorial 96. Variations on the SAGBI Theme 499
Tutorial 97. Gröbner and SAGBI Bases Under Composition 503
Tutorial 98. Molien's Theorem 507
6.7 Automatic Theorem Proving 509
6.7.A The Tribulations of Automation 511
6.7.B Algebraically True Statements 516
6.7.C Optimal Hypothesis Ideals and Minimal Conditions . . 521
Tutorial 99. To Prove or Not to Prove 528

A. The ABC of CoCoA 535

B. One Graphical Interface for Everybody 537

C. More on CoCoA Programming 543

D. Suggestions for Further Reading 557

E. Hints for Selected Exercises 561

Notation 565
