Introduction	1
0.1. The concept of mathematical simulation	1
0.2. Direct and inverse problems	3
0.3. On correctness of direct and inverse problems of mathematical physics	5
 Chapter 1. Some physical motivations of inverse problems	 13
1.1. Inverse problems of geophysics	13
1.2. Inverse tomography problems	22
 Chapter 2. Approximate methods of solution of ill-posed problems	 29
2.1. On some aspects of statement and solution of ill-posed problems .	29
2.2. Solutions on compact sets. The concept of a quasi-solution	30
2.3. The method of quasi-inversion	41
2.4. Regularization methods	47
 Chapter 3. Integral geometry problems	 53
3.1. Statement of integral geometry problems	53
3.2. The Radon problem	53
3.3. The problem of general form on the plane	57
3.4. Problems of general form in the space	65
3.5. Problems of Volterra type with manifolds invariant under the motion group	77
3.6. Integral geometry problems with perturbation on the plane	81
3.7. Mathematical problems of tomography and hyperbolic mappings .	88

Chapter 4. One dimensional inverse problems	103
4.1. Some inverse problems for Lamé system	106
4.2. Inverse problems for quasi-stationary Maxwell's equations	112
4.3. Connections among inverse problems of hyperbolic, elliptic, and parabolic type	118
4.4. Problems with a focused source of disturbances	125
4.5. Reducing the problem with a focused source of disturbances to a linear integral equation: necessary and sufficient conditions for solvability of the inverse problems	135
4.6. Determination of the piece-wise constant coefficient for wave equation	140
Chapter 5. Inverse problems for the coupled Maxwell and Lamé systems	147
5.1. One-dimensional inverse problem of electromagnetoelasticity in the case of the seismomagnetic effect	148
5.2. Inverse problems of electromagnetoelasticity in the case of piezoelectric interaction	156
5.3. Inverse problems of electromagnetoelasticity for weakly conducting media	165
5.4. An inverse problem of electromagnetoelasticity in the case of nonlinear interaction	179
Chapter 6. Numerical solution of inverse problems: some examples	191
6.1. Short review of numerical approaches to solving inverse problems	191
6.2. Numerical solution of a 3D inverse kinematic problem of seismics	196
6.3. Determination of the structure of the Earth's upper mantle	209
6.4. Numerical solution of inverse problems of electromagnetoelasticity	229
6.5. Simulation of the long-term coastal profile evolution	245
Bibliography	259
