Preface

ix

Introduction to finite automata

1

1.1	Alphabets and strings.	1
1.2	Languages.	5
1.3	Language operations.	7
1.4	Finite automata: motivation.	11
1.5	Finite automata and their languages.	14
1.6	Summary of Chapter 1.	21
1.7	Remarks on Chapter 1.	22

Recognisable languages

27

2.1	Designing automata.	27
2.2	Incomplete automata.	29
2.3	Automata that count.	33
2.4	Automata that locate patterns.	37
2.5	Boolean operations.	40
2.6	The Pumping Lemma.	45
2.7	Summary of Chapter 2.	48
2.8	Remarks on Chapter 2.	49

Non-deterministic automata

53

3.1	Accessible automata.	53
3.2	Non-deterministic automata.	60
3.3	Applications.	67
3.4	Trim automata.	72
3.5	Grammars.	76
3.6	Summary of Chapter 3.	83
3.7	Remarks on Chapter 3.	83

e-automata

85

4.1	Automata with e-transitions.	85
4.2	Applications of e-automata.	90

4.3	Summary of Chapter 4.	95
4.4	Remarks on Chapter 4.	95
5	Kleene's Theorem	97
5.1	Regular languages.	97
5.2	Kleene's theorem: proof.	103
5.3	Kleene's theorem: algorithms.	106
5.4	Language equations.	114
5.5	Summary of Chapter 5.	125
5.6	Remarks on Chapter 5.	125
6	Local languages	127
6.1	Myhill graphs.	127
6.2	Linearisation.	134
6.3	Summary of Chapter 6.	139
6.4	Remarks on Chapter 6.	139
7	Minimal automata	141
7.1	Partitions and equivalence relations.	141
7.2	The indistinguishability relation.	144
7.3	Isomorphisms of automata.	152
7.4	The minimal automaton.	155
7.5	The method of quotients.	157
7.6	Summary of Chapter 7.	168
7.7	Remarks on Chapter 7.	168
8	The transition monoid	171
8.1	Functions on states.	171
8.2	The extended transition table.	176
8.3	The Cayley table of an automaton.	183
8.4	Semigroups and monoids.	185
8.5	Summary of Chapter 8.	188
8.6	Remarks on Chapter 8.	189
9	The syntactic monoid	191
9.1	Introduction to semigroups.	191
9.2	Congruences.	198
9.3	The transition monoid of an automaton.	207
9.4	The syntactic monoid of a language.	209
9.5	Summary of Chapter 9.	213
9.6	Remarks on Chapter 9.	214

10 Algebraic language theory	217
10.1 Finite semigroups	217
10.2 Recognisability by a monoid	224
10.3 Two counterexamples	231
10.4 Summary of Chapter 10	234
10.5 Remarks on Chapter 10	234
11 Star-free languages	235
11.1 Introduction	235
11.2 Groups	238
11.3 Aperiodic semigroups	249
11.4 Schützenberger's theorem	252
11.5 An example	258
11.6 Summary of Chapter 11	261
11.7 Remarks on Chapter 11	262
12 Varieties of languages	265
12.1 Pseudovarieties and varieties	265
12.2 Equations for pseudovarieties	273
12.3 Summary of Chapter 12	276
12.4 Remarks on Chapter 12	276
A Discrete mathematics	279
A.1 Logic and proofs	279
A.2 Set theory	281
A.3 Numbers and matrices	285
A.4 Graphs	287
A.5 Functions	288
A.6 Relations	290
Bibliography	293
Index	303
