HYPERSINGULAR INTEGRAL EQUATIONS AND THEIR APPLICATIONS

I.K. Lifanov
L.N. Poltavskii
G.M. Vainikko

CHAPMAN & HALL/CRC

A CRC Press Company
Boca Raton London New York Washington, D.C.

Contents

Preface viii

Authors ix

Chapter 1. Singular Integrals and Integral Equations 1

1.1. Some Facts from the Theory of One-Dimensional Integrals 1

1.2. One-Dimensional Equations 5

1.3. Some Facts from the Theory of Multi-Dimensional Integrals 9

1.4. Two-Dimensional Equations 16

Chapter 2. Sobolev–Slobodetskii Spaces 27

2.1. Generalized Functions 27

2.2. Fourier Transformation 34

2.3. Sobolev–Slobodetskii Spaces 42

2.4. Sobolev–Slobodetskii Spaces on Manifolds 53

Chapter 3. Hypersingular Integral Equations 55

3.1. Pseudodifferential Operators and their Properties 55

3.2. Changing Variables in Pseudodifferential Operators 67

3.3. Pseudodifferential and Hypersingular Integral Equations 77

Chapter 4. Neumann Problem and Integral Equations with Double Layer Potential 95

Introduction 95

4.1. Reduction of the Neumann Problem to a Hypersingular Equation 95

4.2. The Noetherian Property of the Prandtl Operator 105

4.3. Index of the Prandtl Operator 111

4.4. Equation of the Double Layer Potential in the Plane Case 116

Chapter 5. Spaces of Fractional Quotients and Their Properties 121

5.1. Discrete Fourier Transformation and Pseudo-Difference Operators 121

5.2. Special Trigonometric Series 126

5.3. Spaces of Fractional Quotients $M(r, h)$ 131

5.4. Integral Projector 139

5.5. Spaces $\mathring{M}(r, h, \Omega_h)$ and $M(r, h, \Omega_h)$ 149

5.6. Weighted Spaces 164

Chapter 6. Discrete Operators in Quotient Spaces 169

6.1. Bounded Operator Families in Quotient Spaces $M(r, h)$ 169

6.1.1. One-Dimensional Discrete Singular Operators 169

6.1.2. Multidimensional Discrete Singular Operators 171

6.1.3. Discrete Vortex Operators 176

6.1.4. Difference Operators 177

6.2. Approximation of Operators 178

6.3. Quadrature Formulas in Sobolev–Slobodetskii Spaces 184
6.3.1. Quadrature Formulas for Integrals 184
6.3.2. Quadrature Formulas for Singular Integrals 188
6.3.3. Quadrature Formulas for Hypersingular Integrals 189

Chapter 7. Stability of Discrete Operators in Quotient Spaces 193

7.1. Convergence of Approximate Solutions and the Existence of Solutions of Operator Equations 193
7.2. Stability of Discrete Operators in Quotient Spaces 198
7.2.1. Discrete Vortex Operators 198
7.2.2. Iterated Difference Laplace Operator of Order m 200
7.2.3 Hypersingular Operators 202
7.2.4. Second Order Elliptic Difference Operator with Variable Coefficients 202
7.3. Some Equations 203
7.3.1. The Dirichlet Problem for the General Second Order Elliptic Equation 205
7.3.2. Characteristic Hypersingular Equation 207
7.3.3. Iterated Laplace Operator of Order m (the Dirichlet Problem) 207
7.3.4. An Equation Related to Diffraction Problems 208

Chapter 8. Asymptotic Estimates of the Discrete Green Function 211

8.1. Restriction Problems for Pseudodifference Operators 211
8.2. Estimates of the Discrete Green Function for the Discrete Prandtl Operator in the Halfplane 215
8.3. Estimates of the Discrete Green Function for the Prandtl Operators in Bounded Domains 222
8.4. Asymptotic Estimates of the Discrete Green Function in Rectangular Domains 229
8.5. Asymptotic Estimates of Special Matrices 235

Chapter 9. Quadrature Formulas for Singular and Hypersingular Integrals 247

9.1. Integrals over a Closed Smooth Curve; Hilbert Integrals 247
9.2. Integrals over an Open-Ended Smooth Curve 251
9.3. Integrals Arising in Boundary Value Problems for the Laplace and the Helmholtz Equations 257
9.4. Integrals on Smooth Surfaces with Border 260

Chapter 10. Numerical Analysis of Hypersingular Integral Equations 271

10.1. Convergence in Quotient Spaces for Equations on a Smooth Surface with Border 271
10.2. Neumann Problem for the Helmholtz Equation: Convergence in Quotient Spaces for the Corresponding Hypersingular Integral Equation 283
10.3. Weak Convergence for Equations in a Plane Domain 287
10.4. Convergence for the Multhopff Equation 291
10.5. Convergence of the Numerical Solution in the C-Norm 298
10.6. Convergence of Difference Ratios for the Numerical Solution 301

Chapter 11. Problems in Aerodynamics 309

11.1. Mathematical Modelling of Flow Past an Airfoil with Suction and Pseudodifferential Operators 309
11.2. Elements of the Potential Theory in the Plane Case 317
11.3. Mathematical Modelling of Flow Past an Airfoil with Suction and Jet Discharge 334

11.4. Numerical Analysis of 3D Flows Past Bodies of Arbitrary Shape 341
11.5. Elements of the Potential Theory in the Three-Dimensional case 348
11.6. Mathematical Modelling and Numerical Analysis of Nonstationary Flow past a Ship Deck 361

Chapter 12. Some Problems of Physics 367
12.1. Mathematical Modelling of Wide-Band Antennas 367
12.2. Antenna-Diffraction Problems and Current Sources on the Antenna Surface 372
12.3. Numerical Solution of the 3D Neumann problem for the Scalar Helmholtz Equation for Bodies of Complex Shape 376
12.4. Contact Problem: Impression of a Uniformly Moving Punch into an Elastic Halfplane with Heat Generation 381

Conclusion 389
