Stanisław Łojasiewicz

Introduction to Complex Analytic Geometry

Translated from the Polish
by Maciej Klimek

1991 Springer Basel AG

Author's address:

Dr. Stanisław Łojasiewicz
Jagiellonian University
Department of Mathematics
ul. Reymonta 4
PL-30-059 Cracow (Poland)

CONTENTS

Preface to the Polish Edition v
Preface to the English Edition ix

PRELIMINARIES

CHAPTER A. Algebra 1

§ 1. Rings, fields, modules, ideals, vector spaces 1
§ 2. Polynomials 15
§ 3. Polynomial mappings 20
§ 4. Symmetric polynomials. Discriminant 23
§ 5. Extensions of fields 26
§ 6. Factorial rings 27
§ 7. Primitive element theorem 29
§ 8. Extensions of rings 30
§ 9. Noetherian rings 34
§10. Local rings 39
§11. Localization 46
§12. Krull's dimension 53
§13. Modules of syzygies and homological dimension 57
§14. The depth of a module 61
§15. Regular rings 66

CHAPTER B. Topology 72

§ 1. Some topological properties of sets and families of sets 72
§ 2. Open, closed and proper mappings 74
§ 3. Local homeomorphisms and coverings 77
§ 4. Germs of sets and functions 80
§ 5. The topology of a finite dimensional vector space (over $\mathbf{C}$ or $\mathbf{R}$) 84
§ 6. The topology of the Grassmann space 87

CHAPTER C. Complex analysis 98

§ 1. Holomorphic mappings 98
§ 2. The Weierstrass preparation theorem 109
§ 3. Complex manifolds 112
§ 4. The rank theorem. Submersions 134

COMPLEX ANALYTIC GEOMETRY

CHAPTER I. Rings of germs of holomorphic functions 139

§ 1. Elementary properties. Noether and local properties. Regularity 139
§ 2. Unique factorization property 145
§ 3. The Preparation Theorem in Thom-Martinet version 147

CHAPTER II. Analytic sets, analytic germs and their ideals 150

§ 1. Dimension 150
§ 2. Thin sets 152
§ 3. Analytic sets and germs 153
§ 4. Ideals of germs and the loci of ideals. Decomposition into simple germs 160
§ 5. Principal germs 164
§ 6. One-dimensional germs. The Puiseux theorem 170

CHAPTER III. Fundamental lemmas 178

§ 1. Lemmas on quasi-covers 178
§ 2. Regular and k–normal ideals and germs 183
§ 3. Rückert's descriptive lemma 188
§ 4. Hilbert's Nullstellensatz and other consequences (concerning dimension, regularity and k–normality) 196

CHAPTER IV. Geometry of analytic sets 203

§ 1. Normal triples 203
§ 2. Regular and singular points. Decomposition into simple components 208

§ 3. Some properties of analytic germs and sets 221
§ 4. The ring of an analytic germ. Zariski's dimension 225
§ 5. The maximum principle 234
§ 6. The Remmert-Stein removable singularity theorem 237
§ 7. Regular separation 242
§ 8. Analytically constructible sets 245

CHAPTER V. Holomorphic mappings 254

§ 1. Some properties of holomorphic mappings of manifolds 254
§ 2. The multiplicity theorem. Rouché's theorem 256
§ 3. Holomorphic mappings of analytic sets 264
§ 4. Analytic spaces 275
§ 5. Remmert's proper mapping theorem 289
§ 6. Remmert's open mapping theorem 294
§ 7. Finite holomorphic mappings 299
§ 8. c–holomorphic mappings 311

CHAPTER VI. Normalization 314

§ 1. The Cartan and Oka coherence theorems 314
§ 2. Normal spaces. Universal denominators 332
§ 3. Normal points of analytic spaces 337
§ 4. Normalization 343

CHAPTER VII. Analyticity and algebraicity 352

§ 1. Algebraic sets and their ideals 352
§ 2. The projective space as a manifold 355
§ 3. The projective closure of a vector space 359
§ 4. Grassmann manifolds 364
§ 5. Blowings-up 371
§ 6. Algebraic sets in projective spaces. Chow's theorem 381
§ 7. The Rudin and Sadullaev theorems 388
§ 8. Constructible sets. The Chevalley theorem 392
§ 9. Rückert's lemma for algebraic sets 400
§10. Hilbert's Nullstellensatz for polynomials 404
§11. Further properties of algebraic sets. Principal varieties. Degree 407
§12. The ring of an algebraic subset of a vector space 425

§13. Bézout's theorem. Biholomorphic mappings of projective spaces 430
§14. Meromorphic functions and rational functions 438
§15. Ideals of $\mathcal{O}_n$ with polynomial generators 456
§16. Serre's algebraic graph theorem. 459
§17. Algebraic spaces 472
§18. Biholomorphic mappings of factorial subsets in projective spaces 487
§19. The Andreotti-Salmon theorem 492
§20. Chow's theorem on biholomorphic mappings of Grassmann manifolds 502
