Introduction	<i>page vii</i>
1 Affine root systems	1
1.1 Notation and terminology	1
1.2 Affine root systems	3
1.3 Classification of affine root systems	6
1.4 Duality	12
1.5 Labels	14
2 The extended affine Weyl group	17
2.1 Definition and basic properties	17
2.2 The length function on W	19
2.3 The Bruhat order on W	22
2.4 The elements $u(\lambda')$, $v(\lambda')$	23
2.5 The group Ω	27
2.6 Convexity	29
2.7 The partial order on L'	31
2.8 The functions $r_{k'}$, r'_k	34
3 The braid group	37
3.1 Definition of the braid group	37
3.2 The elements $Y^{\lambda'}$	39
3.3 Another presentation of \mathfrak{B}	42
3.4 The double braid group	45
3.5 Duality	47
3.6 The case $R' = R$	49
3.7 The case $R' \neq R$	52

4	The affine Hecke algebra	55
4.1	The Hecke algebra of W	55
4.2	Lusztig's relation	57
4.3	The basic representation of \mathfrak{H}	62
4.4	The basic representation, continued	69
4.5	The basic representation, continued	73
4.6	The operators $Y^{\lambda'}$	77
4.7	The double affine Hecke algebra	81
5	Orthogonal polynomials	85
5.1	The scalar product	85
5.2	The polynomials E_λ	97
5.3	The symmetric polynomials P_λ	102
5.4	The \mathfrak{H} -modules A_λ	108
5.5	Symmetrizers	112
5.6	Intertwiners	117
5.7	The polynomials $P_\lambda^{(\epsilon)}$	120
5.8	Norms	125
5.9	Shift operators	137
5.10	Creation operators	141
6	The rank 1 case	148
6.1	Braid group and Hecke algebra (type A_1)	148
6.2	The polynomials E_m	150
6.3	The symmetric polynomials P_m	155
6.4	Braid group and Hecke algebra (type (C_1^\vee, C_1))	159
6.5	The symmetric polynomials P_m	160
6.6	The polynomials E_m	166
	Bibliography	170
	Index of notation	173
	Index	175
