

# Symmetric Functions and Hall Polynomials

Second Edition

I. G. MACDONALD

*Queen Mary and Westfield College  
University of London*

CLARENDON PRESS • OXFORD

# Contents

## I. SYMMETRIC FUNCTIONS

1. Partitions	1
2. The ring of symmetric functions	17
3. Schur functions	40
4. Orthogonality	62
5. Skew Schur functions	69
6. Transition matrices	99
7. The characters of the symmetric groups	112
8. Plethysm	135
9. The Littlewood–Richardson rule	142
Appendix A: Polynomial functors and polynomial representations	149
Appendix B: Characters of wreath products	169

## II. HALL POLYNOMIALS

1. Finite $\mathfrak{o}$ -modules	179
2. The Hall algebra	182
3. The $LR$ -sequence of a submodule	184
4. The Hall polynomial	187
Appendix (by A. Zelevinsky): Another proof of Hall's theorem	199

## III. HALL–LITTLEWOOD SYMMETRIC FUNCTIONS

1. The symmetric polynomials $R_\lambda$	204
2. Hall–Littlewood functions	208
3. The Hall algebra again	215
4. Orthogonality	222
5. Skew Hall–Littlewood functions	226
6. Transition matrices	238
7. Green's polynomials	246
8. Schur's $Q$ -functions	250

## IV. THE CHARACTERS OF $GL_n$ OVER A FINITE FIELD

1. The groups $L$ and $M$	269
2. Conjugacy classes	270
3. Induction from parabolic subgroups	273
4. The characteristic map	276
5. Construction of the characters	280

6. The irreducible characters	284
Appendix: proof of (5.1)	291
<b>V. THE HECKE RING OF <math>GL_n</math> OVER A LOCAL FIELD</b>	
1. Local fields	292
2. The Hecke ring $H(G, K)$	293
3. Spherical functions	298
4. Hecke series and zeta functions for $GL_n(F)$	300
5. Hecke series and zeta functions for $GSp_{2n}(F)$	302
<b>VI. SYMMETRIC FUNCTIONS WITH TWO PARAMETERS</b>	
1. Introduction	305
2. Orthogonality	309
3. The operators $D'_n$	315
4. The symmetric functions $P_\lambda(x; q, t)$	321
5. Duality	327
6. Pieri formulas	331
7. The skew functions $P_{\lambda/\mu}, Q_{\lambda/\mu}$	343
8. Integral forms	352
9. Another scalar product	368
10. Jack's symmetric functions	376
<b>VII. ZONAL POLYNOMIALS</b>	
1. Gelfand pairs and zonal spherical functions	388
2. The Gelfand pair $(S_{2n}, H_n)$	401
3. The Gelfand pair $(GL_n(\mathbf{R}), O(n))$	414
4. Integral formulas	424
5. The complex case	440
6. The quaternionic case	446
<b>BIBLIOGRAPHY</b>	457
<b>NOTATION</b>	467
<b>INDEX</b>	473
