# Contents

Preface	ix
Introduction	
Symmetric functions	xi
Schur functions and their generalizations	xi
Jacobi polynomials attached to root systems	xi
Constant term identities	xiii
References	xv
Chapter 1. Symmetric Functions	
1. The ring of symmetric functions	1
2. Monomial symmetric functions	2
3. Elementary symmetric functions	3
4. Complete symmetric functions	3
5. Power sums	4
6. Scalar product	5
7. Schur functions	7
8. Zonal polynomials	10
9. Jack's symmetric functions	11
10. Hall-Littlewood symmetric functions	11
11. The symmetric functions $P_\lambda(q, t)$	12
12. Further properties of the $P_\lambda(q, t)$	18
Chapter 2. Orthogonal Polynomials	
1. Introduction	23
2. Root systems	23
3. Orbit sums and Weyl characters	25
4. Scalar product	26
5. The polynomials $P_\lambda$	27
6. Proof of the existence theorem	28
7. Proof of the existence theorem, concluded	32
8. Some properties of the $P_\lambda$	36
9. The general case	37
Chapter 3. Postscript	
1. The affine root system and the extended affine Weyl group	39
2. The braid group	40
3. The affine Hecke algebra	41
4. Cherednik's scalar product	43

5.	Another proof of the existence theorem	44
6.	The nonsymmetric polynomials $E_\lambda$	46
7.	Calculation of $\langle P_\lambda, P_\lambda \rangle$	47
8.	The double affine Hecke algebra and duality	48
9.	The Fourier transform	50
10.	The general case	52
References		53
