Chapter 1. Two-dimensional problems of a magnetic exploration method involving artificial field magnetization and electric exploration by a direct current	1
1.1. Problem statement	1
1.2. Direct problems of an electric exploration and MAM as problems of linear conjunction of analytical functions	3
1.3. Effective algorithm of the solution of a problem of linear conjunction	4
1.4. The theoretical inverse MAM problem and electric exploration with a direct current	10
1.5. Effective algorithm for solving the inverse MAM problem taking account of demagnetization	19
1.6. Uniqueness of the solution of the inverse problem of magnetic exploration	24
1.7. On the weak uniqueness of the solution of the inverse problem	26
1.8. On the uniqueness of the solution of the inverse problem of potential theory in a field magnetization method using a rotating field (Sq-variation)	28
 Chapter 2. The effective algorithms of solution of direct and inverse three-dimensional problems of magnetic exploration taking account of demagnetization	 39
2.1. Reducing the direct problem to the integral equation of the second kind	39
2.2. Solution of the operator equation in a neighborhood of the first eigenvalue	42

2.3. Parametrized algorithms of the solution of direct problems	47
<u>2.4. Examples of mathematical modeling</u>	<u>50</u>
<u>2.5. Solution of the inverse problem in view of demagnetization by the</u> <u>method of the quasi-equivalent ellipsoid</u>	<u>50</u>
2.6. Theoretical and practical examples of realization of the algorithm of the 'equivalent ellipsoid'	53

**Chapter 3. Mathematical theory and algorithms of the solution
of three-dimensional inverse problems of electric exploration
with a direct current** **61**

3.1. Problem statement	62
3.2. Integral equations of the theoretical inverse problem of electric exploration and the method of artificial magnetization	63
3.3. Integral transformations of electromagnetic fields	65
3.4. The algorithm of solution of (3.10) and (3.14) in the class of stellar bodies	66
3.5. On the solution of the charge method inverse problem	69
3.6. Algorithm for solving equations (3.30) and (3.32) in the class of stellar bodies	70
3.7. The magnetic fields of spread currents inverse problem equations .	71
3.7.1. Problem statement	72
3.7.2. Equations of theoretical inverse problem	72
3.8. Two-stage method of the solution to the inverse problem of electric exploration	74

**Chapter 4. Explicit equations for inverse problems of
electromagnetic field** **83**

4.1. Equations of electrodynamics	84
4.2. Formulation of problem	86
4.3. Explicit TIP equations for monochromatic field	88
4.4. The TIP equations for quasi-stationary field	92
4.5. The TIP equations for the case $\sigma_2 = 0$	95
4.6. The TIP equations for arbitrary electromagnetic field	97
4.7. Algorithm for solving the TIP equations in the class of stellar bodies	100
4.8. Conclusions	103
