Integrable Systems in Celestial Mechanics

Ó'Mathúna, D.

2008, Hardcover

ISBN: 978-0-8176-4096-5

A product of Birkhäuser Basel

---

# Contents

<b>Preface</b> .....	ix
<b>0 General Introduction</b> .....	1
<b>1 Lagrangian Mechanics</b> .....	21
1 Lagrangian Systems .....	21
2 Ignorable Coordinates .....	22
3 Separable Systems .....	24
4 Liouville Systems .....	26
<b>2 The Kepler Problem</b> .....	29
1 Features of the Ellipse: Geometry and Analysis .....	29
2 The Two-Body Problem .....	33
3 The Kepler Problem: Vectorial Treatment .....	35
4 The Kepler Problem: Lagrangian Analysis .....	41
<b>3 The Euler Problem I — Planar Case</b> .....	49
1 The Gravitational Field of Two Fixed Centers: Planar Case .....	49
2 The Lagrangian in Liouville Form: The Energy Integral .....	51
3 The First Integrals in Liouville Coordinates .....	53
4 The First Integrals in Spheroidal Coordinates .....	54
5 Reduction of the Equations: The Regularizing Variable .....	56
6 Some Particular Cases .....	58
7 Analysis of the Generic Equation .....	62
8 The Equation for $S = \cos \sigma$ : Specification of $\Lambda$ .....	65
9 The Equation for $R$ .....	77
10 The Time-Angle Relation .....	88
11 The Complementary Range .....	93
12 The Singular Case: $C = 0$ .....	98
13 Summary of the Orbit Solutions .....	105
<b>4 The Euler Problem II — Three-dimensional Case</b> .....	113
1 The Gravitational Field of Two Fixed Centers: General Case .....	113
2 The Ignorable Coordinate: Liouville's Form and the Energy Integral ..	115

3	The First Integrals in Liouville Coordinates .....	118
4	The First Integrals in Spheroidal Coordinates .....	119
5	Reduction of Equations: The Regularization .....	120
6	Normalization of the Quartics .....	121
7	The $\sigma$ -equation in the Case $\beta = 0$ .....	123
8	The $R$ -equation .....	125
9	The Integration of the Third (Longitude) Coordinate .....	133
10	The Time-Angle Relation .....	142
<b>5</b>	<b>The Earth Satellite — General Analysis</b> .....	<b>143</b>
1	The Geopotential and the Density Distribution .....	143
2	The Vinti Potential .....	147
3	The Vinti Dynamical Problem .....	150
4	The Integration of the Lagrangian Equations .....	153
5	Reduction of the Equations; Regularization; Normalization .....	155
6	The $\sigma$ -Equation: Definition of $\Lambda$ .....	157
7	The $R$ -Equation .....	159
8	The Integration of the $\varphi$ -Coordinate .....	172
9	The Time-Angle Relation .....	182
<b>6</b>	<b>The Earth Satellite — Some Special Orbits</b> .....	<b>193</b>
1	Orbits in the Near Equatorial Band .....	193
2	The Equatorial Orbit .....	196
3	The Polar Orbit .....	199
4	The “Critical” Inclination .....	205
<b>Appendix: Calculation and Exhibition of Orbits;</b>		
	<b>The Time-Angle Relation</b> .....	<b>211</b>
1	Orbits in Chapter 3 .....	213
2	Orbits in Chapters 5 and 6 .....	214
3	The Time-Angle Relation .....	215
4	Orbits Derived from Given Initial Conditions in Chapter 3 .....	216
<b>References</b> .....		<b>227</b>
<b>Index</b> .....		<b>231</b>
