UNIVERSITY PRESS

Great Clarendon Street, Oxford OX2 6DP

Oxford University Press is a department of the University of Oxford.
It furthers the University's objective of excellence in research, scholarship,
and education by publishing worldwide in

Oxford New York

Athens Auckland Bangkok Bogotá Buenos Aires Calcutta
Cape Town Chennai Dar es Salaam Delhi Florence Hong Kong Istanbul
Karachi Kuala Lumpur Madrid Melbourne Mexico City Mumbai
Nairobi Paris São Paulo Singapore Taipei Tokyo Toronto Warsaw

with associated companies in Berlin Ibadan

Oxford is a registered trade mark of Oxford University Press
in the UK and in certain other countries

Published in the United States
by Oxford University Press Inc., New York

CONTENTS

1 Different types of crystals **1**
1.1 The notion of a solid crystal 1
1.2 Formation of crystals 4
1.3 Defective crystals 4
1.4 Other properties of crystals 6

2 Discrete and continuum descriptions: general introduction **9**
2.1 Lattice vibrations 9
2.2 Phonons, quantification 11
2.3 Long-wavelength limit 12
2.4 Continuum mechanics 13
2.5 Defects, domains and walls 15

3 Elasticity and anelasticity: continuous viewpoint **20**
3.1 Energy-based elasticity 20
3.2 Variational principles and generalizations 25
3.3 Isotropy and various approximations 28
3.4 Thermoelasticity of conductors 30
3.5 Anelasticity in large strains 34
3.6 Anelasticity in small strains 37
3.7 Media with microstructure 38

4 Elasticity and anelasticity: discrete viewpoint **41**
4.1 The Born–Karman model 41
4.2 Toda lattices 44
4.3 The Boussinesq–Korteweg–de Vries system 45
4.4 The Boussinesq paradigm 47
4.5 Quasi-continuum 49
4.6 Anelasticity: lattice theory 51
4.7 Anelasticity: viscoplasticity and plasticity 52
4.8 Lattices with microstructures 53
4.9 Comparison with finite-difference schemes for continuous models 54

5 Coupled fields in elasticity **57**
5.1 Preliminary remarks 57
5.2 General equations 57
5.3 Classical nonlinear electroelasticity 61
5.4 Electroelasticity in ferroelectrics 63
5.5 Elastic ferromagnets 66
5.6 Elastic conductors 69

6 Nonlinear waves in elastic chains **71**
6.1 Preliminary remarks 71
6.2 Formation of shock waves 71
6.3 The Boussinesq and Korteweg–de Vries model 78
6.4 Sine-Gordon/Frenkel–Kontorova model 91
6.5 Nonlinear Schrödinger equation and modulation 95
6.6 Systems with multiple degrees of freedom: one-dimensional model with several displacements 98
6.7 Two-dimensional models 103

7 Nonlinear waves in elastic crystals with a microstructure **108**
7.1 Introduction 108
7.2 Single solitons 111
7.3 Transition to chaos in the discrete description 123
7.4 Multiple-soliton solutions 129
7.5 Envelope solitons (micropolar case) 137
7.6 Various problems 142
7.7 An application: acoustic emission in defective crystals 146
7.8 Conclusion: the SGdA system, a paradigm? 148

8 Nonlinear waves in martensite structures **149**
8.1 Introduction 149
8.2 Discrete and continuum models 151
8.3 Existence of solitary waves in martensitic alloys 156
8.4 Long-time evolution 167
8.5 Results for the generalized Boussinesq equation (GBE) alone 168
8.6 Higher-order nonlinearities and 'stiff' equations 175
8.7 Two-dimensional spatial problems 182
8.8 Conclusive remarks 188

9 Nonlinear acoustic surface waves in crystals **189**
9.1 Introduction 189
9.2 Thin film coating a nonlinear substrate 194
9.3 Solitary-wave solutions for envelope signals 198
9.4 Quasi-solitonic behaviour 200
9.5 The generalized Zakharov system: another paradigm 202
9.6 Properties of the generalized Zakharov system 205
9.7 Other problems 215

10 Shock waves and phase-transition fronts in thermoelastic crystals **218**
10.1 Preliminary remarks 218
10.2 Discontinuity fronts 219
10.3 Thermomechanical jump relations 223
10.4 Kinetics of coherent phase-transition fronts 231
10.5 The structure of the front 238
10.6 Generalization to media with additional degrees of freedom 243

10.7 Electroelastic crystals 245
10.8 Ferromagnetic crystals 246
10.9 Conclusion 250

11 Miscellany **251**
11.1 More on elastic models with internal variables 251
11.2 Thermoelasticity 252
11.3 Viscoelasticity 255
11.4 Viscoplasticity 257

12 Summary and conclusions **259**
12.1 Quasi-linear and fully nonlinear problems 259
12.2 Nearly integrable systems: still another paradigm? 260
12.3 From the continuum to quasi-particles and from the discrete to the continuum view: duality in the nonlinear domain 260

Appendices **264**
A.1 Elements of field theory 264
A.2 Inverse-scattering method 268
A.3 Bäcklund transformation 270
A.4 Hirota's method 272
A.5 Whitham's averaged-Lagrangian method 274
A.6 The Whitham–Newell technique 278

Bibliography **282**

Subject index **305**
