Mika, J. R.

Singularly perturbed evolution equations with applications to
kinetic theory / by J. R. Mika, J. Banasiak

p. cm. -- (Series on advances in mathematics for applied sciences ; vol. 34)

Includes bibliographical references and index.

ISBN 9810221258

1. Evolution equations. 2. Perturbation (Mathematics). 3. Matter,

Kinetic theory of. I. Banasiak, J. II. Title. III. Series.

Contents

Preface	v
1 Introduction	1
2 Mathematical preliminaries	7
1 Introduction	7
2 General definitions and notation	7
3 Banach and Hilbert spaces	10
4 Distributions and Sobolev spaces	19
5 Vector-valued functions	28
6 Unbounded operators	32
7 Elements of spectral theory	41
3 Semigroup theory	61
1 Introduction	61
2 Generation of semigroups	62
3 Fractional powers of closed operators	72
4 Perturbation theorems	76
5 Asymptotic behaviour of solutions	82
6 Inhomogeneous Cauchy problem	86
7 Applications to partial differential equations	93

4	Development of asymptotic methods for singularly perturbed evolution equations	105
1	Introduction	105
2	Single evolution equations with a small parameter	107
3	Systems of evolution equations with a small parameter	111
5	Some singular-singularly perturbed evolution equations and kinetic equation	125
1	Singular-singularly perturbed evolution equations	125
2	Model system: exact solution	133
3	Model system: standard asymptotic analysis	136
4	Model system: compressed asymptotic expansion	139
5	Modified model system	143
6	Singular-singularly perturbed evolution equations: compressed approach	148
7	Singularly perturbed linear kinetic equations	151
6	Hilbert space theory for equations of kinetic type	161
1	Introduction	161
2	Preliminary results	162
3	Properties of terms of expansion	168
4	Estimates of error of asymptotic expansion	179
5	Remarks on non-selfadjointness of C	192
7	Applications to kinetic equations with bounded collision operators	197
1	Introduction	197
2	Properties of linear Boltzmann equation with unbounded velocity range	199
3	Diffusion approximation to linear Boltzmann equation	207
8	Applications to equations of Fokker-Planck type	215
1	Introduction	215
2	General assumptions	219
3	Variational setting	222
4	Fokker-Planck equation of electron scattering in plasma	224

5	Fokker-Planck equation of Brownian motion	228
6	Fokker-Planck equation of vibrational relaxation of harmonic oscillator	234
9	Applications to spatially inhomogeneous linear Boltzmann equation	239
1	Introduction	239
2	Properties of neutron transport equation in slab geometry	240
3	Asymptotic expansion	246
4	Remarks on general spatially inhomogeneous equation	254
10	Application to kinetic equation with external field	257
1	Introduction	257
2	Properties of collision operator	260
3	Formal asymptotic formulae	263
4	Initial layer part .	267
5	Bulk part	271
6	Error of asymptotic expansion	276
11	Miscellaneous results	279
1	Introduction	279
2	Asymptotic analysis of telegraph systems	279
3	Remarks on compressed asymptotic method in L_1 -setting	290
4	Carleman model .	294
	Bibliography	301
	Index	309
