**Geometry**

Copyright © 1994 by John Milnor.

Credits (the introductions to the articles give complete sources).

*On the total curvature of knots* is reprinted courtesy of Annals of Mathematics.

*On the total curvatures of closed space curves* is reprinted by permission of Mathematica Scandinavica.

*On the existence of a connection with curvature zero* is reprinted by permission of Commentarii Mathematici Helvetici.

*Eigenvalues of the Laplace operator on certain manifolds* is reprinted courtesy of National Academy of Sciences USA.

*A note on curvature and fundamental group* is reprinted by permission of Journal of Differential Geometry.

*Problems in Differential Geometry* is reprinted by permission of the American Mathematical Society.

*Curvatures of left invariant metrics on Lie groups* is reprinted by permission of Academic Press.

*On deciding whether a surface is parabolic or hyperbolic*, is reprinted courtesy of the Mathematical Association of America.

*On fundamental groups of complete affinely flat manifolds* is reprinted by permission of Academic Press.

*On the Betti numbers of real varieties* is reprinted by permission of the American Mathematical Society.

*Isolated singularities defined by weighted homogeneous polynomials* is reprinted from Topology, Volume 9 (1970), John Milnor and Peter Orlik, pp. 385–393, Copyright 1970, with kind permission from Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, UK.

*Isolated critical points of complex functions* is reprinted by permission of the American Mathematical Society.

*A problem in cartography* is reprinted courtesy of the Mathematical Association of America.

*Hilbert's problem 18: on crystallographic groups, fundamental domains, and on sphere packing* is reprinted by permission of the American Mathematical Society.

*Analytic proofs of the "Hairy Ball Theorem" and the Brouwer Fixed Point Theorem* is reprinted courtesy of the Mathematical Association of America.

*Hyperbolic geometry: the first 150 years* is reprinted by permission of the American Mathematical Society.

*On the geometry of the Kepler Problem* is reprinted courtesy of the Mathematical Association of America.

Printed in the United States of America.

\*Starred papers are previously unpublished

<a href="#">Preface</a> . . . . .	vii
<a href="#">Dedication</a> . . . . .	ix

## **[Differential Geometry and Curvature](#)**

<a href="#">On the total curvature of knots</a> . . . . .	3
<a href="#">*On a relationship between the Betti numbers of a hypersurface and an integral of its Gaussian curvature</a> . . . . .	15
<a href="#">On total curvatures of closed space curves</a> . . . . .	27
<a href="#">On the existence of a connection with curvature zero</a> . . . . .	37
<a href="#">Eigenvalues of the Laplace operator on certain manifolds</a> . . . . .	49
<a href="#">A note on curvature and fundamental group</a> . . . . .	53
<a href="#">Problems in differential geometry</a> . . . . .	63
<a href="#">Curvatures of left invariant metrics on Lie groups</a> . . . . .	73
<a href="#">On deciding whether a surface is parabolic or hyperbolic</a> . . . . .	113
<a href="#">On fundamental groups of complete affinely flat manifolds</a> . . . . .	119

## **[Algebraic Geometry and Topology](#)**

<a href="#">On the Betti numbers of real varieties</a> . . . . .	133
<a href="#">Isolated singularities defined by weighted homogeneous polynomials (with P. Orlik)</a> . . . . .	141
<a href="#">Isolated critical points of complex functions</a> . . . . .	153

# CONTENTS

## **Euclidean and non-Euclidean Geometry**

A problem in cartography . . . . .	159
Hilbert's problem 18: on crystallographic groups, fundamental domains, and on sphere packing . . . . .	173
*How to compute volume in hyperbolic space . . . . .	189
*Euler characteristic and finitely additive Steiner measures . . . . .	213
Analytic proofs of the "Hairy Ball Theorem" and the Brouwer Fixed Point Theorem . . . . .	235
Hyperbolic geometry: the first 150 years . . . . .	243
On the geometry of the Kepler problem . . . . .	261
* <a href="#">The Schläfli differential equality</a> . . . . .	<a href="#">281</a>
