

Model Theory for Beginners

15 Lectures

Roman Kossak

Contents

Preface	ix
Chapter 1. Structures	1
1.1. Digraphs	1
1.2. Ordered Sets	2
1.3. Groups and Fields	3
1.4. Relational Structures	4
1.5. Small Technical Difficulties	6
Chapter 2. Language	9
2.1. Symbols	9
2.2. Formulas	10
2.3. Satisfaction	11
2.4. Notational Conventions and Abbreviations	14
Chapter 3. Definability	17
3.1. Defining Integers	17
3.2. Defining Rationals	18
3.3. Defining Order	19
3.4. Parametric Definability	19
Chapter 4. Symmetry	23
4.1. Isomorphisms	23
4.2. Automorphisms	25
4.3. Addition is not Definable in $(\mathbb{Z}, <)$	27
4.4. Ordering is not Definable in $(\mathbb{Z}, +)$	27
4.5. Addition is not Definable in $(\mathbb{N}, \cdot)$	28
4.6. Multiplication is not Definable in $(\mathbb{N}, +)$	29
4.7. Definability in $(\mathbb{Q}, +)$	29
4.8. Orderable Fields	30
Chapter 5. Theories and Types	31
5.1. Theories	31
5.2. Types	32
5.3. Types in Ordered Structures	34
5.4. Types in the Field of Real Numbers	36

5.5. O-minimality of $(\mathbb{Q}, <)$	37
Chapter 6. Elementarity	39
6.1. Elementary Equivalence	39
6.2. Elementary Extensions	42
6.3. Tarski-Vaught Test	43
6.4. End Note on Structures with Finite Domains	44
Chapter 7. Compactness	47
7.1. Semantic and Syntactic Inference	47
7.2. The Compactness Theorem	48
7.3. What is Compact Here?	53
Chapter 8. Nonstandardness	55
8.1. Nonstandardness in Arithmetic	55
8.2. Nonstandardness in Set Theory	56
8.3. Other Forms of Nonstandardness	58
8.4. Nonstandard Versions of $(\mathbb{N}, <)$ and $(\mathbb{Z}, <)$	59
8.5. Models of Presburger Arithmetic	62
8.6. $\mathbb{Z}$ -groups	63
8.7. Infinite Ramsey's Theorem	65
Chapter 9. Categoricity	69
9.1. Countable Categoricity	69
9.2. Homogeneity	71
9.3. The Random Graph	73
9.4. Completeness of Theories	74
9.5. Uncountable Categoricity	75
9.6. Truth in Algebraically Closed Fields	77
Chapter 10. Indiscernibility	79
10.1. Models with Indiscernibles	80
10.2. The Ehrenfeucht Mostowski Theorem	81
Chapter 11. Skolemization	85
11.1. Functions	85
11.2. Built-in Skolem functions	87
11.3. Skolemizing Theories and Structures	91
Chapter 12. Arithmetic	95
12.1. True Arithmetic	95
12.2. Coding	96
12.3. Definable Ultrapowers	97
12.4. Arithmetizing Language	100
12.5. Overspill	101
12.6. Undefinability of Truth	102

Chapter 13. Saturation	105
13.1. $\aleph_0$ -saturation	106
13.2. Types of the Theory of $(\mathbb{N}, <)$	108
13.3. Definitional Reducts	110
13.4. Universality and Homogeneity	112
13.5. Recursive Saturation	115
Chapter 14. Automorphisms of Recursively Saturated Structures	121
14.1. Large Automorphism Groups	124
14.2. Automorphisms of Complex Numbers	127
Chapter 15. Stability	131
15.1. Models Realizing Few Types	131
15.2. $\aleph_0$ -stable theories	133
Bibliography	135
Index	137
