Preface ix
Acknowledgments xiii
Introduction xv

1. NONLINEAR OPTIMIZATION 1
   1.1 World of nonlinear optimization 1
      1.1.1 General formulation of the problem 1
      1.1.2 Performance of numerical methods 4
      1.1.3 Complexity bounds for global optimization 7
      1.1.4 Identity cards of the fields 13
   1.2 Local methods in unconstrained minimization 15
      1.2.1 Relaxation and approximation 15
      1.2.2 Classes of differentiable functions 20
      1.2.3 Gradient method 25
      1.2.4 Newton method 32
   1.3 First-order methods in nonlinear optimization 37
      1.3.1 Gradient method and Newton method: What is different? 37
      1.3.2 Conjugate gradients 42
      1.3.3 Constrained minimization 46

2. SMOOTH CONVEX OPTIMIZATION 51
   2.1 Minimization of smooth functions 51
      2.1.1 Smooth convex functions 51
      2.1.2 Lower complexity bounds for $\mathcal{F}_L^{\infty,1}(R^n)$ 58
      2.1.3 Strongly convex functions 63
      2.1.4 Lower complexity bounds for $\mathcal{S}_{\mu,L}^{\infty,1}(R^n)$ 66

2.1.5 Gradient method 68
2.2 Optimal Methods 71
2.2.1 Optimal methods 71
2.2.2 Convex sets 81
2.2.3 Gradient mapping 86
2.2.4 Minimization methods for simple sets 87
2.3 Minimization problem with smooth components 90
2.3.1 Minimax problem 90
2.3.2 Gradient mapping 93
2.3.3 Minimization methods for minimax problem 96
2.3.4 Optimization with functional constraints 100
2.3.5 Method for constrained minimization 105
3. NONSMOOTH CONVEX OPTIMIZATION 111
3.1 General convex functions 111
3.1.1 Motivation and definitions 111
3.1.2 Operations with convex functions 117
3.1.3 Continuity and differentiability 121
3.1.4 Separation theorems 124
3.1.5 Subgradients 126
3.1.6 Computing subgradients 130
3.2 Nonsmooth minimization methods 135
3.2.1 General lower complexity bounds 135
3.2.2 Main lemma 138
3.2.3 Subgradient method 141
3.2.4 Minimization with functional constraints 144
3.2.5 Complexity bounds in finite dimension 146
3.2.6 Cutting plane schemes 149
3.3 Methods with complete data 156
3.3.1 Model of nonsmooth function 157
3.3.2 Kelley method 158
3.3.3 Level method 160
3.3.4 Constrained minimization 164
4. STRUCTURAL OPTIMIZATION 171
4.1 Self-concordant functions 171
4.1.1 Black box concept in convex optimization 171
4.1.2 What the Newton method actually does? 173
4.1.3 Definition of self-concordant function 175

4.1.4 Main inequalities 181
4.1.5 Minimizing the self-concordant function 187
4.2 Self-concordant barriers 192
4.2.1 Motivation 192
4.2.2 Definition of self-concordant barriers 193
4.2.3 Main inequalities 196
4.2.4 Path-following scheme 199
4.2.5 Finding the analytic center 203
4.2.6 Problems with functional constraints 206
4.3 Applications of structural optimization 210
4.3.1 Bounds on parameters of self-concordant barriers 210
4.3.2 Linear and quadratic optimization 213
4.3.3 Semidefinite optimization 216
4.3.4 Extremal ellipsoids 220
4.3.5 Separable optimization 224
4.3.6 Choice of minimization scheme 227
