Preface	xi
J.C.R. Hunt, J. Norbury and I. Roulstone	
<i>Introduction and Scientific Background</i>	xiii
1. Balanced models in geophysical fluid dynamics: Hamiltonian formulation, constraints and formal stability	
<i>O. Bokhove</i>	1
2. The swinging spring: a simple model of atmospheric balance	
<i>P. Lynch</i>	64
3. On the stationary spectra for an ensemble of plane weakly nonlinear internal gravity waves	
<i>P. Caillol and V. Zeitlin</i>	109
4. Hamiltonian description of shear flow	
<i>N.J. Balmforth and P.J. Morrison</i>	117
5. Some applications of transformation theory in mechanics	
<i>M.J. Sewell</i>	143
6. Legendre-transformable semi-geostrophic theories	
<i>R. James Purser</i>	224
7. The Euler–Poincaré equations in geophysical fluid dynamics	
<i>D.D. Holm, J.E. Marsden and T. Ratiu</i>	251
8. Are there higher-accuracy analogues of semi-geostrophic theory?	
<i>M.E. McIntyre and I. Roulstone</i>	301
