

Takayuki Oda

Periods of Hilbert Modular Surfaces

1982

Birkhäuser
Boston • Basel • Stuttgart

Table of contents

| | |
|---|-----|
| Chapter 0. Historical background, motivations and outline of the contents. | ix |
| Chapter I. Hodge structures attached to primitive forms of weight 2. | 1 |
| 0. Definitions and notations. | 1 |
| 1. Hodge structures attached to Hilbert modular surfaces. | 3 |
| 2. Hodge structures attached to primitive forms of weight 2. | 13 |
| 3. Nonholomorphic involutive automorphisms of Hilbert modular surfaces. | 17 |
| 4. Period relation of Riemann-Hodge. | 21 |
| Chapter II. Abelian varieties attached to primitive forms. | 24 |
| 5. Abelian varieties attached to Clifford algebras. | 24 |
| 6. The period moduli of the isogeny classes $A_f^1 \bullet \mathbb{Q}$ and $A_f^2 \bullet \mathbb{Q}$. | 29 |
| 7. Main theorem A and its corollaries. | 35 |
| 8. Selfconjugate forms and algebraic cycles. | 41 |
| 9. Abelian varieties attached to non-selfconjugate forms. | 47 |
| Chapter III. Correspondence between real Nebentype elliptic modular forms and Hilbert modular forms. | 54 |
| 10. Weil representation and theta series. | 54 |
| 11. Construction of real Nebentype elliptic modular forms. | 57 |
| 12. Construction of Hilbert modular forms. | 62 |
| 13. The adjointness formula. | 70 |
| Chapter IV. Period relation for the lifting of modular forms and transcendental cycles. | 76 |
| 14. Hodge structures attached to real Nebentype elliptic modular forms of weight 2. | 76 |
| 15. Construction of 2-cycles. | 84 |
| 16. Arithmetic index theorems. | 92 |
| 17. Period relation for the Doi-Naganuma lifting and Main Theorem B. | 101 |
| 18. Selfconjugate forms and transcendental cycles. | 106 |
| 19. Notes on ℓ -adic cohomology groups of certain Hilbert modular surfaces. | 111 |
| 20. Remarks. | 116 |
| Bibliography. | 120 |
