Introduction 1

Part I **BACKGROUND MATERIAL**

1. Sample Problems

1.1. Two-Point Boundary Value Problems 9
Notes and Remarks 12
Exercises 13
1.2. Elliptic Boundary Value Problems 14
Notes and Remarks 16
1.3. Integral Equations 18
Notes and Remarks 20
Exercises 20
1.4. Minimization Problems 21
Notes and Remarks 25
Exercises 26
1.5. Two-Dimensional Variational Problems 26
Notes and Remarks 30
Exercises 32

2. Linear Algebra

2.1.	A Review of Basic Matrix Theory	34
	Notes and Remarks	37
	Exercises	37
2.2.	Norms	38
	Notes and Remarks	44
	Exercises	44
2.3.	Inverses	45
	Notes and Remarks	50
	Exercises	51
2.4.	Partial Ordering and Nonnegative Matrices	51
	Notes and Remarks	57
	Exercises	57

3. Analysis

3.1.	Derivatives and Other Basic Concepts	59
	Notes and Remarks	65
	Exercises	66
3.2.	Mean-Value Theorems	68
	Notes and Remarks	73
	Exercises	74
3.3.	Second Derivatives	74
	Notes and Remarks	81
	Exercises	82
3.4.	Convex Functionals	82
	Notes and Remarks	88
	Exercises	89

Part II NONCONSTRUCTIVE EXISTENCE THEOREMS

4. Gradient Mappings and Minimization

4.1.	Minimizers, Critical Points, and Gradient Mappings	93
	Notes and Remarks	97
	Exercises	97
4.2.	Uniqueness Theorems	98
	Notes and Remarks	101
	Exercises	102
4.3.	Existence Theorems	104
	Notes and Remarks	108
	Exercises	109
4.4.	Applications	110
	Notes and Remarks	115
	Exercises	116

5. Contractions and the Continuation Property

5.1. Contractions 119
Notes and Remarks 124
Exercises 125
5.2. The Inverse and Implicit Function Theorems 125
Notes and Remarks 131
Exercises 132
5.3. The Continuation Property 132
Notes and Remarks 139
Exercises 140
5.4. Monotone Operators and Other Applications 141
Notes and Remarks 145
Exercises 145

6. The Degree of a Mapping

6.1. Analytic Definition of the Degree 147
Notes and Remarks 154
Exercises 155
6.2. Properties of the Degree 156
Notes and Remarks 160
Exercises 160
6.3. Basic Existence Theorems 161
Notes and Remarks 163
Exercises 164
6.4. Monotone and Coercive Mappings 165
Notes and Remarks 167
Exercises 168
6.5. APPENDIX. Additional Analytic Results 169

Part III ITERATIVE METHODS

7. General Iterative Methods

7.1. Newton's Method and Some of Its Variations 181
Notes and Remarks 187
Exercises 188
7.2. Secant Methods 189
Notes and Remarks 200
Exercises 205
7.3. Modification Methods 206
Notes and Remarks 212
Exercises 214
7.4. Generalized Linear Methods 214
Notes and Remarks 222
Exercises 229

7.5. Continuation Methods 230
Notes and Remarks 234
Exercises 235
7.6. General Discussion of Iterative Methods 236
Notes and Remarks 239

8. Minimization Methods

8.1. Paraboloid Methods 240
Notes and Remarks 242
Exercises 243
8.2. Descent Methods 243
Notes and Remarks 247
Exercises 248
8.3. Steplength Algorithms 249
Notes and Remarks 258
Exercises 259
8.4. Conjugate-Direction Methods 260
Notes and Remarks 263
Exercises 266
8.5. The Gauss–Newton and Related Methods 267
Notes and Remarks 269
Exercises 271
8.6. APPENDIX 1. Convergence of the Conjugate Gradient and the Davidon–Fletcher–Powell Algorithms for Quadratic Functionals 271
8.7. APPENDIX 2. Search Methods for One-Dimensional Minimization 275

Part IV LOCAL CONVERGENCE

9. Rates of Convergence—General

9.1. The Quotient Convergence Factors 281
Notes and Remarks 286
Exercises 286
9.2. The Root Convergence Factors 287
Notes and Remarks 293
Exercises 294
9.3. Relations between the R and Q Convergence Factors 295
Exercises 298

10. One-Step Stationary Methods

10.1. Basic Results 299
Notes and Remarks 305
Exercises 308

10.2. Newton's Method and Some of Its Modifications 310
Notes and Remarks 316
Exercises 318
10.3. Generalized Linear Iterations 320
Notes and Remarks 331
Exercises 332
10.4. Continuation Methods 334
Notes and Remarks 340
10.5. APPENDIX. Comparison Theorems and Optimal ω for SOR Methods 341

11. Multistep Methods and Additional One-Step Methods

11.1. Introduction and First Results 347
Notes and Remarks 352
Exercises 354
11.2. Consistent Approximations 355
Notes and Remarks 363
Exercises 366
11.3. The General Secant Method 369
Notes and Remarks 378
Exercises 379

Part V SEMILOCAL AND GLOBAL CONVERGENCE

12. Contractions and Nonlinear Majorants

12.1. Some Generalizations of the Contraction Theorem 383
Notes and Remarks 390
Exercises 391
12.2. Approximate Contractions and Sequences of Contractions 393
Notes and Remarks 398
Exercises 399
12.3. Iterated Contractions and Nonexpansions 400
Notes and Remarks 406
Exercises 407
12.4. Nonlinear Majorants 409
Notes and Remarks 414
Exercises 414
12.5. More General Majorants 415
Notes and Remarks 419
Exercises 420
12.6. Newton's Method and Related Iterations 421
Notes and Remarks 428
Exercises 430

13. Convergence under Partial Ordering

13.1.	Contractions under Partial Ordering	432
	Notes and Remarks	439
	Exercises	440
13.2.	Monotone Convergence	441
	Notes and Remarks	446
	Exercises	446
13.3.	Convexity and Newton's Method	447
	Notes and Remarks	454
	Exercises	454
13.4.	Newton–SOR Interactions	456
	Notes and Remarks	463
	Exercises	464
13.5.	*M*-Functions and Nonlinear SOR Processes	464
	Notes and Remarks	470
	Exercises	471

14. Convergence of Minimization Methods

14.1.	Introduction and Convergence of Sequences	473
	Notes and Remarks	478
	Exercises	478
14.2.	Steplength Analysis	479
	Notes and Remarks	493
	Exercises	493
14.3.	Gradient and Gradient-Related Methods	494
	Notes and Remarks	499
	Exercises	500
14.4.	Newton-Type Methods	501
	Notes and Remarks	506
	Exercises	507
14.5.	Conjugate-Direction Methods	509
	Notes and Remarks	512
	Exercises	513
14.6.	Univariate Relaxation and Related Processes	513
	Notes and Remarks	518
	Exercises	519
