Ovsienko, Valentin.

Projective differential geometry old and new: from the Schwarzian derivative to the  
cohomology of diffeomorphism groups / V. Ovsienko, S. Tabachnikov.

p. cm. – (Cambridge tracts in mathematics; 165)

Includes bibliographical references and index.

ISBN 0 521 83186 5 (hardback)

1. Projective differential geometry. I. Tabachnikov, Serge. II. Title. III. Series.

QA660.O87 2005

516.3'6–dc22 2004045919

ISBN 0 521 83186 5 hardback

*Preface: why projective?* *page ix*

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Projective space and projective duality	1
1.2	Discrete invariants and configurations	5
1.3	Introducing the Schwarzian derivative	8
1.4	A further example of differential invariants: projective curvature	13
1.5	The Schwarzian derivative as a cocycle of $\text{Diff}(\mathbb{RP}^1)$	18
1.6	Virasoro algebra: the coadjoint representation	21
<b>2</b>	<b>The geometry of the projective line</b>	<b>26</b>
2.1	Invariant differential operators on $\mathbb{RP}^1$	26
2.2	Curves in $\mathbb{RP}^n$ and linear differential operators	29
2.3	Homotopy classes of non-degenerate curves	35
2.4	Two differential invariants of curves: projective curvature and cubic form	40
2.5	Projectively equivariant symbol calculus	42
<b>3</b>	<b>The algebra of the projective line and cohomology of <math>\text{Diff}(S^1)</math></b>	<b>47</b>
3.1	Transvectants	48
3.2	First cohomology of $\text{Diff}(S^1)$ with coefficients in differential operators	52
3.3	Application: geometry of differential operators on $\mathbb{RP}^1$	57
3.4	Algebra of tensor densities on $S^1$	62
3.5	Extensions of $\text{Vect}(S^1)$ by the modules $F_\lambda(S^1)$	66

<b>4</b>	<b>Vertices of projective curves</b>	<b>69</b>
4.1	Classic four-vertex and six-vertex theorems	69
4.2	Ghys' theorem on zeroes of the Schwarzian derivative and geometry of Lorentzian curves	76
4.3	<a href="#">Barner's theorem on inflections of projective curves</a>	<a href="#">80</a>
4.4	Applications of strictly convex curves	85
4.5	Discretization: geometry of polygons, back to configurations	90
4.6	<a href="#">Inflections of Legendrian curves and singularities of wave fronts</a>	<a href="#">97</a>
<b>5</b>	<b>Projective invariants of submanifolds</b>	<b>103</b>
5.1	Surfaces in $\mathbb{RP}^3$ : differential invariants and local geometry	104
5.2	<a href="#">Relative, affine and projective differential geometry of hypersurfaces</a>	<a href="#">116</a>
5.3	Geometry of relative normals and exact transverse line fields	123
5.4	Complete integrability of the geodesic flow on the ellipsoid and of the billiard map inside the ellipsoid	133
5.5	Hilbert's fourth problem	141
5.6	Global results on surfaces	148
<b>6</b>	<b>Projective structures on smooth manifolds</b>	<b>153</b>
6.1	Definitions, examples and main properties	153
6.2	Projective structures in terms of differential forms	159
6.3	Tensor densities and two invariant differential operators	161
6.4	Projective structures and tensor densities	164
6.5	Moduli space of projective structures in dimension 2, by V. Fock and A. Goncharov	169
<b>7</b>	<b>Multi-dimensional Schwarzian derivatives and differential operators</b>	<b>179</b>
7.1	Multi-dimensional Schwarzian with coefficients in $(2, 1)$ -tensors	179
7.2	Projectively equivariant symbol calculus in any dimension	185
7.3	Multi-dimensional Schwarzian as a differential operator	191
7.4	Application: classification of modules $\mathcal{D}_\lambda^2(M)$ for an arbitrary manifold	194

7.5	Poisson algebra of tensor densities on a contact manifold	197
7.6	Lagrange Schwarzian derivative	205
	<b>Appendices</b>	<b>214</b>
A.1	Five proofs of the Sturm theorem	214
A.2	The language of symplectic and contact geometry	217
A.3	The language of connections	221
A.4	The language of homological algebra	223
A.5	Remarkable cocycles on groups of diffeomorphisms	226
A.6	The Godbillon–Vey class	229
A.7	The Adler–Gelfand–Dickey bracket and infinite-dimensional Poisson geometry	232
	<i>References</i>	236
	<i><a href="#">Index</a></i>	<a href="#">247</a>
