Preface	ix
On the complexity of the linkage reconfiguration problem HELMUT ALT, CHRISTIAN KNAUER, GÜNTER ROTE, AND SUE WHITESIDES	1
Falconer conjecture, spherical averages and discrete analogs GEORGYI ARUTYUNYANTS AND ALEXANDER IOSEVICH	15
Turán-type extremal problems for convex geometric hypergraphs PETER BRASS	25
The thrackle conjecture for K_5 and $K_{3,3}$ GRANT CAIRNS, MARGARET MCINTYRE, AND YURY NIKOLAYEVSKY	35
Three-dimensional grid drawings with sub-quadratic volume VIDA DUJMOVIĆ AND D. R. WOOD	55
On a coloring problem for the integer grid ADRIAN DUMITRESCU AND RADOŠ RADOIČIĆ	67
Separating thickness from geometric thickness DAVID EPPSTEIN	75
Direction trees in centered polygons ROBERT E. JAMISON	87
Path coverings of two sets of points in the plane ATSUSHI KANEKO, MIKIO KANO, AND KAZUHIRO SUZUKI	99
Length of sums in a Minkowski space GYULA O. H. KATONA, RICHARD MAYER, AND WOJBOR A. WOYCZYNSKI	113
A new entropy inequality for the Erdős distance problem NETS HAWK KATZ AND GÁBOR TARDOS	119
Coloring intersection graphs of geometric figures with a given clique number ALEXANDER KOSTOCHKA	127
Convex quadrilaterals and k -sets LÁSZLÓ LOVÁSZ, KATALIN VESZTERGOMBI, ULI WAGNER, AND EMO WELZL	139

Distance graphs and rigidity HIROSHI MAEHARA	149
A Ramsey property of planar graphs JAROSLAV NEŠETŘIL, JÓZSEF SOLYMOSI, AND PAVEL VALTR	169
A generalization of quasi-planarity JÁNOS PACH, RADOŠ RADOIČIĆ, AND GÉZA TÓTH	177
Geometric incidences JÁNOS PACH AND MICHA SHARIR	185
Large sets must have either a k -edge or a $(k + 2)$ -edge MICHA PERLES AND ROM PINCHASI	225
Topological graphs with no self-intersecting cycle of length 4 ROM PINCHASI AND RADOŠ RADOIČIĆ	233
A problem on restricted sumsets IMRE Z. RUZSA	245
The gap between the crossing numbers and the convex crossing numbers FARHAD SHAHROKHI, ONDREJ SÝKORA, LÁSZLÓ SZÉKELY, AND IMRICH VRŤO	249
Distinct distances in high dimensional homogeneous sets JÓZSEF SOLYMOSI AND VAN H. VU	259
The biplanar crossing number of the random graph JOEL H. SPENCER	269
The unit distance problem on spheres KONRAD SWANEPOEL AND PAVEL VALTR	273
Short proof for a theorem of Pach, Spencer, and Tóth LÁSZLÓ SZÉKELY	281
