Contents

Series Preface	vii.
-----------------------------	------

Preface	ix.
----------------------	-----

Chapter 1. Introduction

1. Some examples	1.
2. The Mathematical Setting	6.
3. The Variety of optimization problems	13.
4. Exercises	15.

Chapter 2. Linear Programming

1. Introduction.....	23.
2. The simplex method.....	30.
3. Duality.....	42.
4. Some practical issues	49.
5. Integer programming	59.
6. Exercises	63.

Chapter 3. Nonlinear Programming

1. Model problem	67.
2. Lagrange multipliers.....	69.
3. Karush–Kuhn–Tucker optimality conditions.....	79.
4. Convexity	86.
5. Sufficiency of the KKT conditions	95.
6. Duality and convexity	102.
7. Exercises	106.

Chapter 4. Approximation Techniques

1. Introduction	111.
2. Line search methods.....	113.
3. Gradient methods	116.
4. Conjugate gradient methods.....	119.
5. Approximation under constraints	124.
6. Final remarks	131.
7. Exercises.....	132.

Chapter 5. Variational Problems and Dynamic Programming

1. Introduction	137.
2. The Euler–Lagrange Equation: examples.....	140.
3. The Euler–Lagrange Equation: justification	153.
4. Natural boundary conditions	157.
5. Variational problems under integral and pointwise restrictions..	159.
6. Summary of restrictions for variational problems.....	168.
7. Variational problems of different order	172.
8. Dynamic programming: Bellman’s equation	177.
9. Some basic ideas on the numerical approximation	184.
10. Exercises.....	190.

Chapter 6. Optimal Control

1. Introduction	195.
2. Multipliers and the hamiltonian	197.
3. Pontryagin’s principle	204.
4. Another format	224.
5. Some comments on the numerical approximation.....	226.
6. Exercises.....	232.
