Contents

<u>Foreword: MASS and REU at Penn State University</u>	xi
<u>Preface</u>	xiii
<u>Chapter 1. Basic Concepts and Examples</u>	1
<u>Lecture 1</u>	1
<u>a. A threefold cord: fractals, dynamics, and chaos</u>	1
<u>b. Fractals: intricate geometry and self-similarity</u>	2
<u>c. Dynamics: things that move (or don't)</u>	7
<u>Lecture 2</u>	10
a. Dynamical systems: terminology and notation	10
b. Population models and the logistic map	13
<u>Lecture 3</u>	19
<u>a. A linear map with chaotic behaviour and the middle-third Cantor set</u>	19
<u>b. The Cantor set and symbolic dynamics</u>	24
<u>Lecture 4</u>	28
<u>a. Some point-set topology</u>	28
b. Metric spaces	31
c. Lebesgue measure	34
<u>Lecture 5</u>	37
a. The topological structure of symbolic space and the Cantor set	37

b. What the coding map doesn't do	41
c. Geometry of Cantor sets	42
Lecture 6	46
a. More general constructions	46
b. Making sense of it all	50
Chapter 2. Fundamentals of Dimension Theory	53
Lecture 7	53
a. Definition of Hausdorff dimension	53
b. Hausdorff dimension of the middle-third Cantor set	58
c. Alternative definitions of Hausdorff dimension	60
Lecture 8	62
a. Properties of Hausdorff dimension	62
b. Topological dimension	66
Lecture 9	68
a. Comparison of Hausdorff and topological dimension	68
b. Metrics and topologies	71
c. Topology and dimension	74
Lecture 10	75
a. Hausdorff dimension of Cantor sets	75
b. Moran's Theorem	76
c. Moran constructions	80
d. Dynamical constructions and iterated function systems	82
Lecture 11	85
a. Box dimension: another way of measuring dimension	85
b. Properties of box dimension	88
Lecture 12	90
a. Relationships between the various dimensions	90
b. A counterexample	94
c. Stability and subadditivity	98
Chapter 3. Measures: Definitions and Examples	101
Lecture 13	101
a. A little bit of measure theory	101
b. Lebesgue measure and outer measures	105

c. Hausdorff measures	109
Lecture 14	110
a. Choosing a “good” outer measure	110
b. Bernoulli measures on symbolic space	111
c. Measures on Cantor sets	113
d. Markov measures	114
Lecture 15	117
a. The support of a measure	117
b. Subshifts of finite type: One-dimensional Markov maps	120
Chapter 4. Measures and Dimensions	123
Lecture 16	123
a. The Uniform Mass Distribution Principle: Using measures to determine dimension	123
b. Pointwise dimension and the Non-uniform Mass Distribution Principle	125
Lecture 17	128
a. Variable pointwise dimension	128
b. Hausdorff dimension of exact dimensional measures	135
c. Pointwise dimension of Hausdorff measures	137
Lecture 18	138
a. Local entropy	138
b. Kolmogorov–Sinai entropy	142
c. Topological entropy	143
Lecture 19	146
a. Entropy of Markov measures	146
b. Hausdorff dimension of Markov constructions	149
Lecture 20	151
a. Lyapunov exponents	151
b. Fractals within fractals	155
Chapter 5. Discrete-Time Systems: The FitzHugh–Nagumo Model	159
Lecture 21	159
a. The FitzHugh–Nagumo model for neurons	159

b. Numerical investigations: From continuous to discrete	164
Lecture 22	167
a. Studying the local map	167
b. Stability of fixed points for general maps	169
Lecture 23	175
a. Stability of fixed points for the FitzHugh–Nagumo model	175
b. Periodic points	177
Lecture 24	181
a. Beyond period-doubling: Down the rabbit hole	181
b. Becoming one-dimensional	185
Chapter 6. The Bifurcation Diagram for the Logistic Map	191
Lecture 25	191
a. Bifurcations of the logistic map	191
b. Classifying bifurcations	194
Lecture 26	198
a. The period-doubling cascade	198
b. Chaos at the end of the bifurcation diagram	199
c. The centre cannot hold: escape to infinity	202
Lecture 27	204
a. Finding the relevant part of phase space: ω -limit sets	204
b. Windows of stability in the bifurcation diagram	206
c. Chaos outside the windows of stability	207
Chapter 7. Chaotic Attractors and Persistent Chaos	209
Lecture 28	209
a. Trapping regions	209
b. Attractors	212
Lecture 29	215
a. The Smale–Williams solenoid	215
b. Uniform hyperbolicity	218
c. Symbolic dynamics	221
Lecture 30	224
a. Dimension of direct products	224
b. Quantifying the attractor	228

c. Lyapunov exponents in multiple dimensions	229
d. The non-conformal case	231
e. The attractor for the FitzHugh–Nagumo map	232
Chapter 8. Horseshoes and Intermittent Chaos	233
Lecture 31	233
a. The Smale horseshoe: A trapping region that isn't	233
b. Hausdorff dimension of the horseshoe	237
c. Symbolic dynamics on the Smale horseshoe	239
Lecture 32	241
a. Variations on a theme: Other horseshoes	241
b. Intermittent chaos vs. persistent chaos	245
c. Homoclinic orbits and horseshoes	247
Chapter 9. Continuous-Time Systems: The Lorenz Model	253
Lecture 33	253
a. Continuous-time systems: Basic concepts	253
b. Fixed points of continuous-time systems	256
Lecture 34	259
a. The pendulum	259
b. Two-dimensional systems	263
Lecture 35	267
a. The Lorenz equations	267
b. Beyond the linear mindset	269
c. Examining the Lorenz system	269
Lecture 36	274
a. Passing to a Poincaré map	274
b. Horseshoes in the Lorenz system	277
Lecture 37	281
a. The Lorenz attractor	281
b. The geometric Lorenz attractor	281
c. Dimension of the geometric Lorenz attractor	285
d. Back to the Lorenz attractor, and beyond	286
Appendix	289
Hints to selected exercises	295

Suggested Reading	299
Bibliography	305
Index	309
