EDITORIAL STATEMENT

The mathematization of all sciences, the fading of traditional scientific boundaries, the impact of computer technology, the growing importance of mathematical-computer modelling and the necessity of scientific planning all create the need both in education and research for books that are introductory to and abreast of these developments.

The purpose of this series is to provide such books, suitable for the user of mathematics, the mathematician interested in applications, and the student scientist. In particular, this series will provide an outlet for material less formally presented and more anticipatory of needs than finished texts or monographs, yet of immediate interest because of the novelty of its treatment of an application or of mathematics being applied or lying close to applications.

The aim of the series is, through rapid publication in an attractive but inexpensive format, to make material of current interest widely accessible. This implies the absence of excessive generality and abstraction, and unrealistic idealization, but with quality of exposition as a goal.

Many of the books will originate out of and will stimulate the development of new undergraduate and graduate courses in the applications of mathematics. Some of the books will present introductions to new areas of research, new applications and act as signposts for new directions in the mathematical sciences. This series will often serve as an intermediate stage of the publication of material which, through exposure here, will be further developed and refined. These will appear in conventional format and in hard cover.

MANUSCRIPTS

The Editors welcome all inquiries regarding the submission of manuscripts for the series. Final preparation of all manuscripts will take place in the editorial offices of the series in the Division of Applied Mathematics, Brown University, Providence, Rhode Island.

TABLE OF CONTENTS

	INTRODUCTION	1
I.	VISCOELASTIC RESPONSE IN SHEAR	4
	1. Stress Relaxation	4
	2. Creep	7
	3. Response Functions	8
	4. Models	9
	5. Superposition	11
	6. Tensile Response	13
	7. Relation Between Modulus and Compliance	14
	8. Sinusoidal Shearing	16
	9. Nomenclature	18
	10. Energy Storage and Loss	18
	11. Oscillation with Increasing Amplitude	19
II.	FOURIER AND LAPLACE TRANSFORMS	22
	1. Fourier Transforms	22
	2. Two-sided Laplace Transforms	23
	3. Laplace Transforms	24
	4. Elementary Formulas	26
	5. Convolutions	28

III. RELATIONS BETWEEN MODULUS AND COMPLIANCE 33

1. Limits and Moments: Fluids 33
2. Limits and Moments: Solids 36
3. Solids and Fluids 38
4. Scale-Invariant Response 39
5. Approximate Transform Inversion 41
6. Direct Approximation 42
7. Approximate Relation Between Modulus and Complex Modulus 45
8. Graphs of Moduli and Compliances 46
9. Completely Monotone Moduli 47

IV. SOME ONE-DIMENSIONAL DYNAMICAL PROBLEMS 51

1. Torsional Oscillations 52
   a. Viscous Fluid 53
   b. Elastic Solid 53
   c. Maxwell Fluid 53
   d. Power-law Solid 54
   e. Real Solids with Small Losses 55
2. Plane Shear Waves 56
   a. Elastic Solid 58
   b. Viscous Fluid 58
   c. Power-law Solids 60
      1. Long-Time Behavior 62
      2. Short-Time Behavior 63
      3. Wide Saddle-Points 65
   d. Real Solids with Small Losses 67
   e. The Elastic Precursor 72
   f. Long-Time Behavior 73

V. STRESS ANALYSIS 77

1. Quasi-Static Approximation 77
2. Stress-Strain Relations 79
3. Simplest Deformations of Isotropic Materials 80
4. Simple Tension: Basic Approximation Methods 82
5. The Correspondence Principle 88

	6.	Example: Flat-Headed Punch	90
	7.	Example: Tube under Internal Pressure	91
	8.	Incompressible Materials	95
VI.	THERMAL EFFECTS		98
	1.	The Time-Temperature Shift Factor	98
	2.	Example: Runaway	102
	3.	Variable-Temperature Histories	106
	4.	Example: Simple Tension of a Cooling Rod	110
	5.	Thermal Expansion	112
VII.	LARGE DEFORMATIONS WITH SMALL STRAINS		115
	1.	Example: Simple Rotation	116
	2.	Example: Torsion	116
	3.	Small Distortions with Large Rotations	117
	4.	Relative Strain	119
	5.	Isotropic Materials	121
	6.	Fluids	121
	7.	Example: Steady Simple Shearing	122
	8.	Example: Oscillatory Shearing	123
	9.	Motions with Uniform Velocity Gradient	124
	10.	Anisotropic Fluids	128
VIII.	SLOW VISCOELASTIC FLOW		131
	1.	Viscoelastic Flow	131
	2.	Flow Diagnosis	131
	3.	Slow Viscoelastic Flow: Asymptotic Approximations	136
	4.	Slow Viscoelastic Flow: Three-Dimensional Equations	138
	5.	Orders of Approximation in Slow Motion	143
	6.	The Rivlin-Ericksen Tensors	143
	7.	Solution of Problems	145
	8.	Ordinary Perturbations	148
	9.	A Useful Identity	149
	10.	Plane Flow	151
	11.	Flow in Tubes	153

IX. VISCOMETRIC FLOW 157

1. Stress 158
2. Example: Channel Flow 159
3. Slip Surfaces, Shear Axes, and Shear Rate 160
4. Dynamical Problems 163
5. Flow in Tubes 163
6. Viscometric Equation in Terms of Rivlin-Ericksen Tensors 166
7. Centripetal Effects 168
8. Boundary Layers 171
