<b>Chapter 1. Indefinite inner product spaces. Linear operators.</b>	
<b>Interpolation</b>	<b>1</b>
1. Indefinite inner product spaces . . . . .	2
1.1. Definitions . . . . .	2
1.2. Krein spaces . . . . .	3
1.3. The Gram operator. $W$ -spaces . . . . .	6
1.4. $J$ -orthogonal complements. Projective completeness . . . . .	9
1.5. <u><math>J</math>-orthonormalized systems</u> . . . . .	<u>12</u>
2. The basic classes of operators in Krein spaces . . . . .	14
2.1. $J$ -dissipative operators . . . . .	14
2.2. <u><math>J</math>-selfadjoint operators</u> . . . . .	<u>20</u>
3. Interpolation of Banach and Hilbert spaces and applications . . . . .	23
3.1. Preliminaries . . . . .	23
3.2. <u>Continuity of some functionals in a Hilbert scale</u> . . . . .	<u>28</u>
3.3. Separation of the spectrum of an unbounded operator . . . . .	39
3.4. <u>Interpolation properties of bases</u> . . . . .	<u>50</u>
4. The existence of maximal semidefinite invariant subspaces for $J$ -dissipative operators . . . . .	52
5. First order equations. Decomposition of a solution . . . . .	77
5.1. Function spaces . . . . .	77
5.2. The Cauchy problem . . . . .	81
5.3. <u>Auxiliary definitions. Some properties of imaginary powers         of operators</u> . . . . .	<u>90</u>
5.4. <u>Solvability of the Cauchy problem in the original Banach         space</u> . . . . .	<u>94</u>

5.5. Adjoint problems . . . . .	95
5.6. Arbitrary operators. Phase spaces . . . . .	100
5.7. Remarks and examples . . . . .	106
<b>Chapter 2. Spectral theory for linear selfadjoint pencils</b>	<b>111</b>
1. Examples . . . . .	112
1.1. Selfadjoint pencils . . . . .	112
1.2. Elliptic eigenvalue problems with indefinite weight function . . . . .	113
2. Basic assumptions. The structure of root subspaces . . . . .	114
3. The Riesz basis property. Invariant subspaces . . . . .	127
3.1. Basis property . . . . .	127
3.2. Invariant subspaces. Some applications . . . . .	144
4. Sufficient conditions . . . . .	147
<b>Chapter 3. Elliptic eigenvalue problems with an indefinite weight function</b>	<b>151</b>
1. Auxiliary function spaces. Interpolation . . . . .	153
1.1. Definitions . . . . .	153
1.2. Interpolation of weighted Sobolev spaces . . . . .	160
1.3. <a href="#">Inequalities of the Hardy type</a> . . . . .	<a href="#">184</a>
2. Preliminaries. Basic assumptions . . . . .	209
2.1. Variational statement . . . . .	209
2.2. Elliptic problems . . . . .	216
3. Basisness theorems . . . . .	220
3.1. The general case . . . . .	220
3.2. The one-dimensional case . . . . .	228
4. Examples and counterexamples . . . . .	236
<b>Chapter 4. Operator-differential equations</b>	<b>253</b>
1. Generalized solutions. Positive definite case . . . . .	255
1.1. Preliminaries . . . . .	255
1.2. Uniqueness and existence theorems . . . . .	260
2. Degenerate case . . . . .	268
2.1. Preliminaries . . . . .	268
2.2. Solvability theorems. The case of a bounded interval . . . . .	270

2.3. Solvability theorems. The case of the interval  $(0, \infty)$  . . . . 272

2.4. Smoothness of solutions. Orthogonality conditions . . . . . 287

2.5. The periodic problem.  
     Linear inverse problems . . . . . 289

3. The Fourier method . . . . . 291

    3.1. Representation of solutions. First order equations . . . . . 291

    3.2. Some problems for the second order equations . . . . . 296

4. Some applications to partial differential equations . . . . . 302

    4.1. Higher order parabolic equations with changing  
         time direction . . . . . 302

    4.2. Second order parabolic equations with changing  
         time direction . . . . . 310

    4.3. Orthogonality conditions. Parabolic equations . . . . . 317

    4.4. Second order mixed type equations. Orthogonality  
         conditions . . . . . 320

**Bibliography** . . . . . **323**
