## Preface to the English Edition

The method of difference potentials (MDP) was proposed in [1]–[8] and significantly developed in [9]–[101] and some other works.

The present book describes the current state of the art in the method of difference potentials and is a revised and essentially supplemented version of the author's first book devoted to this method, which was published by "Nauka" in 1987 [100].

This monograph deals with the MDP apparatus and several of its applications, particularly to the following problems:

1. the numerical solution of interior and exterior boundary-value problems for systems of partial differential equations;
2. the construction of conditions at the artificial boundary of the computational domain, which equivalently replace the equations and conditions at infinity in stationary problems of gas flow past immersed bodies as well as in some other steady-state problems;
3. the spectral approach to the construction of artificial boundary conditions replacing the equations of propagation of physical fields outside the computational domain containing perturbation sources;
4. the construction of artificial boundary conditions on the boundary of the computational domain for numerically solving the scattering problems in large time in a neighborhood of a fixed or a moving scatterer;
5. the statement and solution of stationary mathematical problems of the active shielding of a given subdomain from the influence of perturbation sources located outside the screened subdomain.

The new possibilities provided by the method of difference potentials originate from the fact that this method combines several advantages of the classical Cauchy-type integral from the theory of analytic functions and the universality of difference schemes.

The book can be useful to readers interested in different fields and pursuing different goals.

To become acquainted with the method of difference potentials, it suffices to read the contents and to study the introduction where the basic ideas, constructions, and advantages of the method of difference potentials are discussed and illustrated by model examples related to the Poisson equation. This will give a full glimpse of the method of difference potentials.

The reader who is interested in one of the above-listed problems or in any other application studied in the book can pass, after the introduction, directly to a corresponding chapter from Parts IV–VIII of the book. Each of these parts contains the appropriate theoretical material from Parts I–III, which is necessary for particular applications and is given without proofs in the most convenient form. Parts I–III of the book are intended for the reader who is interested in the general concepts of the method of difference potentials and their theoretical justification, as well as in some new applications of the method of difference potentials.

Moreover, Parts I–III can be of interest in themselves to specialists in the field of the qualitative theory of partial differential equations and boundary integral and pseudodifferential equations. The point is that in these sections of the book the potentials, projections, and boundary Calderón–Seeley equations are modified. The author carried out these modifications and generalizations in order to obtain the differential closures of MDP constructions as the grid step-size tends to zero. However, they are also meaningful beyond the framework of MDP applications, just as concepts from the theory of partial differential equations.

The studies described in the book were chiefly carried out at the M. V. Keldysh Institute of Applied Mathematics of the Russian Academy of Sciences, which bears the name of its organizer, at the Department of Computational Mathematics of the Moscow Institute of Physics and Technology, at the Mechanical Engineering Research Institute of the Russian Academy of Sciences, as well as at the Institute for Mathematical Modeling of the Russian Academy of Sciences, at Tel Aviv University, and at ICASE, NASA Langley Research Center.

## Acknowledgements

The new results which did not enter the monograph published in 1987 but are described in this book were mainly obtained by the author and his colleagues: R. I. Veitsman, E. V. Zinoviev, D. S. Kamenetskii, D. A. Lesnik, M. N. Mishkov, V. A. Torgashov, V. I. Turchaninov, S. V. Tsynkov, A. F. Shlychkov, and E. Yu. Epshteyn. Moreover, Sects. 1.3 and 2.4 in Part II were written on my request by D. S. Kamenetskii and Chap. 2 in Part V by S. V. Tsynkov. I wish to express my deep gratitude to all my colleagues.

It is a pleasure for me to particularly thank Professor S. V. Tsynkov for his active collaboration, which has become especially fruitful and versatile soon after S. V. Tsynkov started his scientific work in his student years at the Moscow Institute of Physics and Technology about 15 years ago.

It should be mentioned with deep gratitude that new studies carried out in different places and presented in this book enjoyed the essential support of the Russian Foundation for Basic Research, the J. Soros International Science Foundation, the Stichting Foundation for Science, Technology, and

Research, and the National Aeronautics and Space Administration, USA, through Director's Discretionary Fund, Langley Research Center.

The author cordially and gratefully thinks back to his scientific supervisor during his student and postgraduate years, Academician I. G. Petrovskii, and to his school teacher of mathematics, I. E. Vaisman.

The author cordially thanks Academician I. M. Gelfand who also exerted inspiring influence on the author when he was still a young researcher.

In conclusion, the author wishes to thank heartily his wife and friend, Nataliya Petrovna Ryaben'kaya, who shares all his griefs and joys, which accompanies his work on the creation and development of the method of difference potentials.

Moscow, June 2001

## From the Preface to the Russian Edition

The method of difference potentials (MDP) allows one to find numerical solutions of many problems related to partial differential equations. The method of difference potentials was proposed by the author in his doctorate (D. Sc.) thesis in 1969. In the succeeding years, the method of difference potentials was significantly developed by the author and his pupils who were graduate and postgraduate students at the Moscow Institute of Physics and Technology working under the author's guidance: A. Ya. Belyankov, M. Yu. Lokhanov, A. A. Reznik, I. L. Sofronov, A. M. Fedorovskii, and D. I. Yanushevich.

Valuable contributions to the development of the method of difference potentials were made by L. V. Bad'in, R. I. Veitsman, A. V. Voronkov, A. V. Zabrodin, E. V. Zinoviev, M. I. Lazarev, V. V. Ogneva, B. Z. Os-serovich, E. P. Sychugova, and V. I. Turchaninov. The author wishes to thank everyone who participated in this work.

The author is greatly indebted to K. V. Brushlinskii, L. P. Volevich, G. P. Voskresenskii, V. F. D'yachenko, A. V. Zabrodin, Ya. M. Kazhdan, L. V. Kirillov, N. M. Korobov, O. A. Oleinik, G. P. Prokopov, Yu. B. Radvogin, S. S. Ryabin'kii, I. D. Sofronov, R. P. Fedorenko, L. G. Khazin, A. S. Kholodov, and N. N. Chentsov, and to all his colleagues and friends for their interest in his work and their support.

The author also wishes to express his deep gratitude to the Corresponding Member of the USSR Academy of Sciences K. I. Babenko, the Corresponding Member of the USSR Academy of Sciences S. K. Godunov, Professor O. V. Lokutsievskii, and Professor S. G. Mikhlin for their attention and support.

The author is deeply indebted to Academician O. M. Belotserkovskii for many useful discussions and his help in involving graduate and postgraduate students of the Moscow Institute of Physics and Technology in these investigations.

The author wishes to thank the Board of Directors of the Institute of Applied Mathematics of the USSR Academy of Sciences, which nowadays bears the name of M. V. Keldysh, where the author has carried out the bulk of the research work presented in this monograph.

XII From the Preface to the Russian Edition

The author also wishes to thank Professor L. A. Chudov, who carefully read the manuscript, for his useful remarks, which significantly improved the book.

Moscow, 1987

<b>Preface to the English Edition</b> .....	VII
<b>From the Preface to the Russian Edition</b> .....	XI
<b>Introduction</b> .....	1
0.1 Statement of Model Problems .....	3
0.2 Difference Potentials .....	7
0.3 Solution of Model Problems .....	25

---

**Part I. Justification of Algorithms of the Method  
of Difference Potentials for Calculating  
Numerical Solutions of Interior  
Boundary-Value Problems  
for the Laplace Equation**

---

<b>1. Preliminaries</b> .....	37
1.1 Local Splines .....	37
1.2 Finite Fourier Series .....	40
1.3 Calculation of the Solution of a Difference Analog of the Dirichlet Problem for the Poisson Equation in a Square Region .....	41
1.4 Hölder Spaces .....	44
1.5 Schauder and Thomee Estimates .....	48
1.6 On the Proximity of Solutions of the Differential and Difference Dirichlet Problems for the Poisson Equation in a Square Domain .....	49
<b>2. Differential and Difference Potentials</b> .....	53
2.1 Fundamental Solution and Green Functions and Operators ..	53
2.2 Potentials and Their Integral and Operator Representations .	56
2.3 Definition and Calculation of a Difference Potential .....	66
2.4 Approximation of a Differential Potential by a Difference Potential .....	72

<b>3.</b>	<b>Reduction of Boundary-Value Problems for the Laplace Equation to Boundary Equations of Calderón–Seeley Type</b> .....	81
3.1	Boundary Projection and a Boundary Condition of Calderón–Seeley Type .....	81
3.2	Passage from Boundary-Value Problems in a Domain to Equations on Its Boundary .....	84
<b>4.</b>	<b>Numerical Solution of Boundary-Value Problems</b> .....	87
4.1	Intermediate Discretization .....	87
4.2	Final Discretization .....	97
4.3	Conjugate Gradient Method .....	117
4.4	Reduction of the Discrete Problem to a Form Convenient for the Solution by the Conjugate Gradient Method .....	123
4.5	An Algorithm for the Numerical Solution of the Discrete Problem by the Conjugate Gradient Method .....	129
4.6	A Computational Example .....	135

---

**Part II. General Constructions of Surface Potentials and Boundary Equations on the Basis of the Concept of a Clear Trace**

---

<b>1.</b>	<b>Generalized Potentials and Boundary Equations with Projections for Differential Operators</b> .....	141
1.1	Clear Trace and General Constructions of Differential Potentials and Boundary Equations with Projections .....	141
1.2	Conditionality of Boundary Equations with Projections .....	151
1.3	Comments on the Literature .....	154
<b>2.</b>	<b>General Constructions of Potentials and Boundary Equations for Difference Operators</b> .....	159
2.1	General Constructions .....	159
2.2	Examples .....	167
2.3	Cauchy-Type Potentials for General Linear Systems of Difference Equations on Abstract Grids .....	172
2.4	Cauchy-Type Potentials and Uniquely Solvable Difference Boundary-Value Problems .....	179
2.5	Reznik's Algorithm for Calculating the Difference Potential ..	198
2.6	Comments on the Literature .....	201

**3. Lazarev's Results on the Algebraic Structure of the Set of Surface Potentials of a Linear Operator** ..... 207

3.1 Preliminaries ..... 207

3.2 Potentials with Density from the Space of Clear Traces and Boundary Equations with Projections of an Abstract Operator ..... 209

**Part III. A General Scheme of the Method of Difference Potentials for the Numerical Solution of Differential and Difference Boundary-Value Problems of Mathematical Physics**

**1. A General Scheme of the Method of Difference Potentials for Differential Problems** ..... 217

1.1 Nonclassical Auxiliary Problems ..... 217

1.2 Admissible Arbitrariness in the Choice of the Construction of a Clear Trace ..... 221

1.3 Scheme for Approximating Differential Potentials by Difference Potentials ..... 225

1.4 The Reznik Theorems on the Approximation of the Surface Potentials of Elliptic Operators by Difference Potentials ..... 231

1.5 Intermediate Discretization of Boundary Equations with Projections ..... 234

1.6 Constructive Discretization Scheme for Boundary Equations with Projections ..... 240

1.7 Fragments of Other Methods of Constructive Discretization ..... 249

1.8 Methods of Deriving an Algebraic System of Simple Structure ..... 252

1.9 On the Operator adjoint to the Green Operator of the Difference Auxiliary Problem ..... 257

**2. Illustrations of Constructions of the Method of Difference Potentials** ..... 273

2.1 Examples of Interior Problems ..... 273

2.2 Examples of Exterior Problems ..... 279

2.3 An Example of Constructing the Difference Potential for Solving Numerically Boundary-Value Problems in a Domain with a Cut ..... 282

2.4 An Example of Boundary Equations with Projections for the Stokes System ..... 287

**3. General Scheme of the Method of Difference Potentials for Solving Numerically the Difference Analogs of Differential Boundary-Value Problems . . . . . 291**

3.1 Statement of Difference Problems . . . . . 291

3.2 Abstract Equations with Projections . . . . . 293

3.3 Reduction of Difference Problems to Equations for the Density of the Difference Potential and the Scheme for Calculating Solutions to These Equations . . . . . 302

3.4 Methods for Obtaining Boundary Conditions with Projections that are Convenient for Iterations . . . . . 305

3.5 Difference Single Layer Potential as an Example of Potentials of Special Form. Resonance in the Complementary Domain. Relation to the Capacity Matrix Method . . . . . 315

3.6 Remark on the Combined Use of the Finite Element Method, the Fedorenko Multigrid Method, and the Method of Difference Potentials . . . . . 321

**Part IV. Examples of MDP Algorithms for Solving Numerically Boundary-Value Problems of Mathematical Physics**

**1. The Tricomi Problem . . . . . 329**

1.1 Difference Analogs of the Tricomi Problem . . . . . 330

1.2 Algorithms of the Method of Difference Potentials . . . . . 334

1.3 Computational Results . . . . . 339

**2. Constructions of the Method of Difference Potentials for the Computation of Stressed States of Elastic Compressible Materials . . . . . 341**

2.1 Difference Potential . . . . . 341
