Preface	ix
Recipe for One Semester Course and Interdependence of The Chapters	xiv
Notations	xvii
<b>Prologue: The Length Function</b>	<b>1</b>
<hr/>	
<b>1 Riemann Integration</b>	<b>5</b>
<hr/>	
1.1 The Riemann integral: A review	5
1.2 Characterization of Riemann integrable functions	18
1.3 Historical notes: Integral from antiquity to Riemann	29
1.4 Drawbacks of the Riemann integral	35
<b>2 Recipes for Extending The Riemann Integral</b>	<b>43</b>
<hr/>	
2.1 A function theoretic view of the Riemann integral	43
2.2 Lebesgue's recipe	45
2.3 Riesz-Daniell recipe	47
<b>3 Extending The Length Function; General Extension Theory</b>	<b>49</b>
<hr/>	
3.1 First extension of the length function	49
3.2 Semi-algebra and algebra of sets	51

3.3	Extending a set function from a semi-algebra to the algebra generated by it	54
3.4*	Impossibility of extending the length function to all subsets of $\mathbb{R}$	55
3.5	Countably additive set functions on intervals	57
3.6	Countably additive set functions on algebras	59
3.7	Approximating the length of a set $A \subseteq \mathbb{R}$ : The induced outer measure	65
3.8	Choosing nice sets: Measurable sets	68
3.9	The $\sigma$ -algebras and extending a measure from an algebra to the $\sigma$ -algebra generated by it	73
3.10	Uniqueness of the extension	76
3.11	Measure space, complete measure space and completion of a measure space	81
<b>4</b>	<b>The Lebesgue Measure on <math>\mathbb{R}</math> and Its Properties</b>	<b>87</b>
4.1	The unique extension of the length function: The Lebesgue measure	87
4.2	Relation of the Lebesgue measurable sets with topologically nice sets of $\mathbb{R}$	91
4.3	Properties of the Lebesgue measure with respect to the group structure on $\mathbb{R}$	94
4.4	Uniqueness of the Lebesgue measure	97
4.5*	Cardinalities of the $\sigma$ -algebras $\mathcal{L}$ and $\mathcal{B}_{\mathbb{R}}$	102
4.6	Nonmeasurable subsets of $\mathbb{R}$	104
4.7	The Lebesgue-Steinitz measure	106
<b>5</b>	<b>Integration</b>	<b>107</b>
5.1	The integral of nonnegative simple functions	108
5.2	Extending the integral beyond nonnegative simple functions	112
5.3	Intrinsic characterization of the class $\mathbb{L}^+$ : Nonnegative measurable functions	118

5.4	Integrable functions	128
5.5	The Lebesgue integral and its relation with the Riemann integral	136
5.6	$L_1[a, b]$ as completion of $\mathcal{R}[a, b]$	139
5.7	Another dense subspace of $L_1[a, b]$	144
5.8	Improper Riemann integral and its relation with the Lebesgue integral	149
5.9	Calculation of some improper Riemann integrals	153
<b>6</b>	<b>Fundamental Theorem of The Integral Calculus for Lebesgue Integrals</b>	<b>155</b>
6.1	Absolutely continuous functions	155
6.2	Differentiability of monotone functions	159
6.3	Fundamental theorem of calculus and its applications	170
<b>7</b>	<b>Measure and Integration on Product Spaces</b>	<b>187</b>
7.1	Introduction	187
7.2	Product of two measure spaces	188
7.3	Integration on product spaces: Fubini's theorems	197
7.4	The Lebesgue measure on $\mathbb{R}^2$ and its properties	205
7.5	Product of finitely many measure spaces	213
<b>8</b>	<b>Modes of Convergence and <math>L_p</math>-Spaces</b>	<b>217</b>
8.1	Integration of complex-valued functions	217
8.2	Convergence: pointwise, almost everywhere, uniform and almost uniform	222
8.3	Convergence in measure	228
8.4	$L_p$ -Spaces and convergence in the $p^{\text{th}}$ -mean	234
8.5	Necessary and sufficient conditions for convergence in $L_p$	242
8.6	Dense subspaces of $L_p$	250
8.7	Regularization of functions	252

8.8	$L_\infty(X, \mathcal{S}, \mu)$ : The space of essentially bounded functions	262
8.9	$L_2(X, \mathcal{S}, \mu)$ : The space of square integrable functions	266
8.10	$L_2$ -Convergence of Fourier series	275
<b>9</b>	<b>The Radon-Nikodym Theorem and Its Applications</b>	<b>280</b>
9.1	Absolutely continuous measures and the Radon-Nikodym theorem	280
9.2	Computation of the Radon-Nikodym derivative	290
9.3	Change of variable formulas	300
<b>10</b>	<b>Signed Measures and Complex Measures</b>	<b>313</b>
10.1	Signed measures	313
10.2	Radon-Nikodym theorem for signed measures	322
10.3	Complex measures	333
10.4	Bounded linear functionals on $L_p^*(X, \mathcal{B}, \mu)$	342
	<b>Appendix</b>	<b>353</b>
	Appendix A.0 Singular value decomposition of a matrix	353
	Appendix A.1 Functions of bounded variation	354
	Appendix A.2 Differentiable transformations	357
	<b>References</b>	<b>365</b>
	<b>Symbol Index</b>	<b>368</b>
	<b>Subject Index</b>	<b>374</b>
