

CONTENTS

Preface	xi
Chapter I. Preliminary Results	1
§1. Associative-Lie pairs, identities of pairs, and varieties of pairs. Connections with varieties of representations of Lie algebras	1
§2. Complexity of varieties of Lie algebras and their representations	8
§3. Central closure for semiprime algebras	21
§4. Capelli identities and the rank theorem	27
§5. Isomorphism of centrally prime associative-Lie pairs with the same identities over an algebraically closed field	30
Chapter II. Characters and α -functions on 2-words and Varieties of Representations of Lie Algebras Distinguished by Them	37
§6. An important example	37
§7. Characters on 2-words and α -functions	58
§8. The variety of pairs $\overline{\mathfrak{B}}_\alpha$ defined by the character α	59
§9. The construction of α -functions for any representation of a finite-dimensional Lie algebra possessing a nondegenerate invariant symmetric bilinear form	61
§10. The correspondence between the ideals of weak identities and ideals of the commutative algebra defined by a multiplicative character on 2-words	63
§11. A general approach and the setting of the problem of studying varieties of pairs by the method of 2-words	66
Chapter III. α -functions Related to the Killing Form and to Irreducible Representations of Semisimple Lie Algebras. Central Polynomials of Irreducible Representations of Reductive Lie Algebras	71
§12. Statement of the main results of the chapter	71
§13. Some remarks on the enveloping algebras of semisimple Lie algebras	74
§14. Existence of central polynomials in simple enveloping algebras	76
§15. Varieties of algebras with three supports $\text{var}(K, \mathfrak{g}, U)$	79
§16. An auxiliary algebra with three supports $(\overline{\mathcal{F}}_0, \overline{\mathcal{X}}_1, \overline{F}_1)$ and the extension of an α -function α to the space of generalized 2-elements	81
§17. For finite-dimensional U , the identities of the pair (U, \mathfrak{g}) are determined by its α -function	85
§18. Proof of Theorem 12.1	88
§19. For an arbitrary simple algebra U , the identities of the pair (U, \mathfrak{g}) are determined by its α -function	90
§20. Some consequences of Theorems 12.1 and 16.1	91

§21. A construction of a polynomial mapping that recovers the algebra of commutative polynomials from the Lie algebra of all of its derivations	93
Chapter IV. α -functions Related to Full Matrix Algebras. Trace Identities and Central Polynomials of Full Matrix Algebras M_n and Matrix Superalgebras $M_{n,k}$	103
§22. Main results of the chapter	103
§23. Calculation of the α -function α_n and the algebra \mathcal{E}	105
§24. An algebra of trace polynomials. Main notions	108
§25. An auxiliary trace algebra	110
§26. Classification of $\eta_{\bar{\alpha}}$ -closed ideals and ideals of trace identities V such that $V \cap T_l$ is a two-sided ideal in T_l over fields of characteristic zero	121
§27. Description of trace identities in the full matrix algebras M_n and in the matrix superalgebras $M_{n,k}$	130
§28. Three lemmas	132
§29. c -dual sets in the algebra $M_{n,k}$	137
§30. Trace identities of the superalgebra $M_{n,k}$	139
§31. Central polynomials in the algebras M_n and $M_{n,k}$	143
§32. A description of the lattice of η_{α} -closed ideals in $K[\gamma]$	152
§33. Consequences of the classification of $\theta_{\bar{\alpha}}$ -closed ideals of trace identities related to varieties of associative nil-algebras	154
Chapter V. The α -function Related to Representations of the Simple Three-Dimensional Lie Algebra \mathfrak{g} and its Applications to Varieties of Groups and Associative Algebras	161
§34. Preliminaries	161
§35. Computation of the α -function $\alpha: B \rightarrow \mathcal{E}$ and of the algebra \mathcal{E}	165
§36. A basis of identities for the Lie algebra \mathfrak{g}	171
§37. Finite basis property for the identities of subvarieties of pairs in $\text{var}(U(\mathfrak{g}), \mathfrak{g})$ over fields of characteristic zero	175
§38. Bases of identities for irreducible representations of the Lie algebra \mathfrak{g}	181
§39. Examples of minimal nonsolvable Engel varieties of pairs over fields of characteristic $p \geq 5$	192
§40. Nonsolvability of varieties of locally finite groups of exponent 4 and of prime exponent p for $p \geq 5$	198
§41. A basis of identities for the full matrix algebra of order two	204
Chapter VI. Varieties Generated by Lie Algebras of Cartan Type	211
§42. Summary of results	211
§43. Identities in Lie algebras of Cartan type	214
§44. Embedding of algebras of Cartan type in $\widetilde{W}_n(K)$	222
§45. Recovery of the algebra of regular functions of a smooth irreducible affine variety from the Lie algebra of its vector fields	231
§46. Simple Lie algebras satisfying the standard Lie identity of degree 5	235
§47. Criteria for existence of proper subalgebras of finite codimension in Lie algebras	251
§48. Simple Lie algebras in varieties of exponential type	254

Chapter VII. Algebraic Supplements	265
§49. Generalities of the theory of universal algebras and algebras with several supports	265
§50. Partially ordered sets	273
§51. Theorems on homomorphisms of commutative algebras	275
§52. Universal enveloping algebras	283
§53. Modules over associative algebras	291
§54. Properties of enveloping algebras	297
Historical Survey	305
References	313
