Preface	iii
Introduction	1
1 Cauchy problem for Maxwell's equations	4
1.1 Maxwell's equations as a hyperbolic symmetric system	5
1.2 Structure of the Cauchy problem solution in case of the current located on the media interface	12
2 One-Dimensional Inverse Problems	21
2.1 Structure of the Fourier-image of the Cauchy problem solution for one- dimensional medium in case of the current located at a point	22
2.2 The problem of determining the medium permittivity	27
2.3 The problem of determining the conductivity coefficient	39
2.4 The problem of determining all the coefficients of Maxwell's equations . .	43
3 Multidimensional Inverse Problems	54
3.1 Linearization method applied to the inverse problems	54
3.2 Investigation of the linearized problem of determining the permittivity coefficient	58
3.3 Unique solvability theorem for a two-dimensional problem of determining the conductivity coefficient analytic in one variable	62
3.4 On the uniqueness of the solution of three-dimensional inverse problems .	74
4 Inverse Problems in the Case of Source Periodic in Time	83
4.1 One-dimensional inverse problems	84
4.2 Linear one-dimensional inverse problem	92
4.3 Linearized three-dimensional inverse problem	96
5 Inverse Problems for Quasi-Stationary Maxwell's Equations	101
5.1 On correspondence between the solutions of quasi-stationary and wave Maxwell's equations	102
5.2 An one-dimensional inverse problem of determining the conductivity and permeability coefficients	104
5.3 The one-dimensional inverse problem for wave-quasistationary system of equations	114
6 The Inverse Problems for the Simplest Anisotropic Media	120
6.1 On the uniqueness of determination of permittivity and permeability in anisotropic media	121
6.2 On the problem of determining permittivity and conductivity tensors . . .	129

7	Numerical Methods	146
7.1	Projection method for solving the Multidimensional Inverse Problems . . .	147
7.2	One-dimensional problems	151
7.3	Two-dimensional direct problems	162
7.4	Finite-difference scheme inversion (FDSI)	165
7.5	Linearization method	177
7.6	Newton-Kantorovich method	188
7.7	Optimization methods	197
7.8	Dynamical version of the Gel'fand-Levitan method	206
8	Convergence Results	212
8.1	Definitions and examples	212
8.2	Local well-posedness and uniqueness on the whole	216
8.3	Well-posedness in a neighborhood of the exact solution	218
8.4	Convergence of the finite-difference scheme inversion	221
9	Examples	224
9.1	Inductive dielectric well-logging	225
9.2	Nearsurface radarlocation problem	230
	References	238
