British Library Cataloguing-in-Publication Data

A catalogue record for this book is available from the British Library.

ISBN 0 7503 1015 4

Library of Congress Cataloging-in-Publication Data are available

First published 1978
Reprinted 1979
Second edition 1982
Third edition 1988
Fourth edition 2005

Commissioning Editor: John Navas
Editorial Assistant: Leah Fielding
Production Editor: Simon Laurenson
Production Control: Sarah Plenty
Cover Design: Victoria Le Billon
Marketing: Louise Higham, Kerry Hollins and Ben Thomas

Published by Institute of Physics Publishing, wholly owned by The Institute of Physics, London

Institute of Physics Publishing, Dirac House, Temple Back, Bristol BS1 6BE, UK

US Office: Institute of Physics Publishing, The Public Ledger Building, Suite 929, 150 South Independence Mall West, Philadelphia, PA 19106, USA

Contents

1 The Restless Universe 1

1.1 Introduction……1
1.2 The Solar System……1
1.2.1 Kepler's laws……4
1.2.2 Bode's law……4
1.2.3 Commensurabilities in mean motion……5
1.2.4 Comets, the Edgeworth-Kuiper Belt and meteors……7
1.2.5 Conclusions……9
1.3 Stellar Motions……9
1.3.1 Binary systems……11
1.3.2 Triple and higher systems of stars……11
1.3.3 Globular clusters……13
1.3.4 Galactic or open clusters……14
1.4 Clusters of Galaxies……14
1.5 Conclusion……15
Bibliography……15

2 Coordinate and Time-Keeping Systems 16

2.1 Introduction……16
2.2 Position on the Earth's Surface……16
2.3 The Horizontal System……18
2.4 The Equatorial System……20
2.5 The Ecliptic System……21
2.6 Elements of the Orbit in Space……22
2.7 Rectangular Coordinate Systems……24
2.8 Orbital Plane Coordinate Systems……24
2.9 Transformation of Systems……25
2.9.1 The fundamental formulae of spherical trigonometry……25
2.9.2 Examples in the transformation of systems……28
2.10 Galactic Coordinate System……35
2.11 Time Measurement……36
2.11.1 Sidereal time……36
2.11.2 Mean solar time……39

© IOP Publishing Ltd 2005

2.11.3 The Julian date.....41
2.11.4 Ephemeris Time.....41
Problems.....42
Bibliography.....43

3 The Reduction of Observational Data 44
3.1 Introduction.....44
3.2 Observational Techniques.....44
3.3 Refraction.....47
3.4 Precession and Nutation.....48
3.5 Aberration.....53
3.6 Proper Motion.....55
3.7 Stellar Parallax.....55
3.8 Geocentric Parallax.....56
3.9 Review of Procedures.....60
Problems.....61
Bibliography.....61

4 The Two-Body Problem 62
4.1 Introduction.....62
4.2 Newton's Laws of Motion.....62
4.3 Newton's Law of Gravitation.....63
4.4 The Solution to the Two-Body Problem.....64
4.5 The Elliptic Orbit.....67
4.5.1 Measurement of a planet's mass.....69
4.5.2 Velocity in an elliptic orbit.....70
4.5.3 The angle between velocity and radius vectors.....73
4.5.4 The mean, eccentric and true anomalies.....74
4.5.5 The solution of Kepler's equation.....76
4.5.6 The equation of the centre.....78
4.5.7 Position of a body in an elliptic orbit.....78
4.6 The Parabolic Orbit.....80
4.7 The Hyperbolic Orbit.....83
4.7.1 Velocity in a hyperbolic orbit.....84
4.7.2 Position in the hyperbolic orbit.....85
4.8 The Rectilinear Orbit.....87
4.9 Barycentric Orbits.....89
4.10 Classification of Orbits with Respect to the Energy Constant.....90
4.11 The Orbit in Space.....91
4.12 The f and g Series.....95
4.13 The Use of Recurrence Relations.....97
4.14 Universal Variables.....98
Problems.....99
Bibliography.....100

5 The Many-Body Problem 101
5.1 Introduction.....101

© IOP Publishing Ltd 2005

5.2 The Equations of Motion in the Many-Body Problem……102
5.3 The Ten Known Integrals and Their Meanings……103
5.4 The Force Function……105
5.5 The Virial Theorem……108
5.6 Sundman's Inequality……108
5.7 The Mirror Theorem……111
5.8 Reassessment of the Many-Body Problem……112
5.9 Lagrange's Solutions of the Three-Body Problem……112
5.10 General Remarks on the Lagrange Solutions……117
5.11 The Circular Restricted Three-Body Problem……118
5.11.1 Jacobi's integral……118
5.11.2 Tisserand's criterion……121
5.11.3 Surfaces of zero velocity……122
5.11.4 The stability of the libration points……126
5.11.5 Periodic orbits……130
5.11.6 The search for symmetric periodic orbits……132
5.11.7 Examples of some families of periodic orbits……134
5.11.8 Stability of periodic orbits……136
5.11.9 The surface of section……138
5.11.10 The stability matrix……139
5.12 The General Three-Body Problem……140
5.12.1 The case $C < 0$……141
5.12.2 The case for $C = 0$……142
5.12.3 Jacobian coordinates……143
5.13 Jacobian Coordinates for the Many-body Problem……144
5.13.1 The equations of motion of the simple *n*-body HDS……145
5.13.2 The equations of motion of the general *n*-body HDS……147
5.13.3 An unambiguous nomenclature for a general HDS……151
5.14 The Hierarchical Three-body Stability Criterion……151
Problems……152
Bibliography……152

6. The Caledonian Symmetric *N*-body Problem 154
6.1 Introduction……154
6.2 The Equations of Motions……154
6.3 Sundman's Inequality……157
6.4 Boundaries of Real and Imaginary Motion……162
6.5 The Caledonian Symmetric Model for $n = 1$……164
6.6 The Caledonian Symmetric Model for $n = 2$……168
6.6.1 The Szebehely Ladder and Szebehely's Constant……173
6.6.2 Regions of real motion in the ρ_1, ρ_2, ρ_{12} space……174
6.6.3 Climbing the rungs of Szebehely's Ladder……177
6.6.4 The case when $E_0 < 0$……182
6.6.5 Unequal masses $\mu_1 \neq \mu_2$ in the $n = 2$ case……182
6.6.6 Szebehely's Constant……183
6.6.7 Loks and Sergysels study of the general four-body problem……184
6.7 The Caledonian Symmetric Model for $n = 3$……185

© IOP Publishing Ltd 2005

6.8 The Caledonian Symmetric TV-Body Model for odd TV.....191
Bibliography.....193

7. General Perturbations **194**
7.1 The Nature of the Problem.....194
7.2 The Equations of Relative Motion.....195
7.3 The Disturbing Function.....197
7.4 The Sphere of Influence.....198
7.5 The Potential of a Body of Arbitrary Shape.....201
7.6 Potential at a Point Within a Sphere.....206
7.7 The Method of the Variation of Parameters.....208
7.7.1 Modification of the mean longitude at the epoch.....212
7.7.2 The solution of Lagrange's planetary equations.....214
7.7.3 Short-and long-period inequalities.....217
7.7.4 The resolution of the disturbing force.....220
7.8 Lagrange's Equations of Motion.....223
7.9 Hamilton's Canonic Equations.....226
7.10 Derivation of Lagrange's Planetary Equations from Hamilton's Canonic Equations.....231
Problems.....232
Bibliography.....233

8. Special Perturbations **234**
8.1 Introduction.....234
8.2 Factors in Special Perturbation Problems.....235
8.2.1 The type of orbit.....235
8.2.2 The operational requirements.....235
8.2.3 The formulation of the equations of motion.....235
8.2.4 The numerical integration procedure.....235
8.2.5 The available computing facilities.....235
8.3 Cowell's Method.....236
8.4 Encke's Method.....237
8.5 The Use of Perturbational Equations.....239
8.5.1 Derivation of the perturbation equations (case $h \neq 0$).....241
8.5.2 The relations between the perturbation variables, the rectangular co-ordinates and velocity components, and the usual conic-section elements.....244
8.5.3 Numerical integration procedure.....246
8.5.4 Rectilinear or almost rectilinear orbits.....249
8.6 Regularization Methods.....251
8.7 Numerical Integration Methods.....253
8.7.1 Recurrence relations.....255
8.7.2 Runge-Kutta four.....255
8.7.3 Multistep methods.....256
8.7.4 Numerical methods.....256
Problems.....261
Bibliography.....261

© IOP Publishing Ltd 2005

9 The Stability and Evolution of the Solar System **263**
9.1 Introduction....263
9.2 Chaos and Resonance....264
9.3 Planetary Ephemerides....266
9.4 The Asteroids....266
9.5 Rings, Shepherds, Tadpoles, Horseshoes and Co-Orbitals....269
9.5.1 Ring systems....269
9.5.2 Small satellites of Jupiter and Saturn....270
9.5.3 Spirig and Waldvogel's analysis....273
9.5.4 Satellite-ring interactions....281
9.6 Near-Commensurable Satellite Orbits....284
9.7 Large-Scale Numerical Integrations....286
9.7.1 The outer planets for 120000 years....286
9.7.2 Element plots for 1000000 years....286
9.7.3 Does Pluto's perihelion librate or circulate?....287
9.7.4 The outer planets for 10^8 years—and longer!....288
9.7.5 The analytical approach against the numerical approach....290
9.7.6 The whole planetary system....291
9.8 Empirical Stability Criteria....292
9.9 Conclusions....295
Bibliography....296

10 Lunar Theory **299**
10.1 Introduction....299
10.2 The Earth-Moon System....299
10.3 The Saros....301
10.4 Measurement of the Moon's Distance, Mass and Size....303
10.5 The Moon's Rotation....304
10.6 Selenographic Coordinates....306
10.7 The Moon's Figure....306
10.8 The Main Lunar Problem....307
10.9 The Sun's Orbit in the Main Lunar Problem....309
10.10 The Orbit of the Moon....310
10.11 Lunar Theories....311
10.12 The Secular Acceleration of the Moon....313
Bibliography....314

11 Artificial Satellites **315**
11.1 Introduction....315
11.2 The Earth as a Planet....315
11.2.1 The Earth's shape....317
11.2.2 Clairaut's formula....318
11.2.3 The Earth's interior....321
11.2.4 The Earth's magnetic field....321
11.2.5 The Earth's atmosphere....322
11.2.6 Solar-terrestrial relationships....324
11.3 Forces Acting on an Artificial Earth Satellite....326

© IOP Publishing Ltd 2005

11.4 The Orbit of a Satellite About an Oblate Planet.....327
11.4.1 The short-period perturbations of the first order.....330
11.4.2 The secular perturbations of the first order.....333
11.4.3 Long-period perturbations from the third harmonic.....333
11.4.4 Secular perturbations of the second-order and long-period perturbations.....334
11.5 The Use of Hamilton-Jacobi Theory in the Artificial Satellite Problem.....335
11.6 The Effect of Atmospheric Drag on an Artificial Satellite.....337
11.7 Tesseral and Sectorial Harmonics in the Earth's Gravitational Field.....342
Problems.....343
Bibliography.....343

12 Rocket Dynamics and Transfer Orbits 345
12.1 Introduction.....345
12.2 Motion of a Rocket.....345
12.2.1 Motion of a rocket in a gravitational field.....346
12.2.2 Motion of a rocket in an atmosphere.....347
12.2.3 Step rockets.....348
12.2.4 Alternative forms of rocket.....350
12.3 Transfer Between Orbits in a Single Central Force Field.....350
12.3.1 Transfer between circular, coplanar orbits.....351
12.3.2 Parabolic and hyperbolic transfer orbits.....354
12.3.3 Changes in the orbital elements due to a small impulse.....355
12.3.4 Changes in the orbital elements due to a large impulse.....357
12.3.5 Variation of fuel consumption with transfer time.....358
12.3.6 Sensitivity of transfer orbits to small errors in position and velocity at cut-off.....360
12.3.7 Transfer between particles orbiting in a central force field.....364
12.4 Transfer Orbits in Two or More Force Fields.....368
12.4.1 The hyperbolic escape from the first body.....368
12.4.2 Entry into orbit about the second body.....370
12.4.3 The hyperbolic capture.....372
12.4.4 Accuracy of previous analysis and the effect of error.....373
12.4.5 The fly-past as a velocity amplifier.....376
Problems.....378
Bibliography.....379

13 Interplanetary and Lunar Trajectories 380
13.1 Introduction.....380
13.2 Trajectories in Earth-Moon Space.....380
13.3 Feasibility and Precision Study Methods.....381
13.4 The Use of Jacobi's Integral.....382
13.5 The Use of the Lagrangian Solutions.....382
13.6 The Use of Two-Body Solutions.....383
13.7 Artificial Lunar Satellites.....386
13.7.1 Relative sizes of lunar satellite perturbations due to different causes.....387
13.7.2 Jacobi's integral for a close lunar satellite.....390

© IOP Publishing Ltd 2005

13.8 Interplanetary Trajectories 393
13.9 The Solar System as a Central Force Field 394
13.10 Minimum-Energy Interplanetary Transfer Orbits 395
13.11 The Use of Parking Orbits in Interplanetary Missions 401
13.12 The Effect of Errors in Interplanetary Orbits 406
Problems 407

14 Orbit Determination and Interplanetary Navigation 408
14.1 Introduction 408
14.2 The Theory of Orbit Determination 409
14.3 Laplace's Method 411
14.4 Gauss's Method 413
14.5 Olbers's Method for Parabolic Orbits 415
14.6 Orbit Determination with Additional Observational Data 417
14.7 The Improvement of Orbits 421
14.8 Interplanetary Navigation 424
14.8.1 Stabilized platforms and accelerometers 424
14.8.2 Navigation by on-board optical equipment 426
14.8.3 Observational methods and probable accuracies 428
Bibliography 429

15 Binary and Other Few-Body Systems 430
15.1 Introduction 430
15.2 Visual Binaries 432
15.3 The Mass-Luminosity Relation 435
15.4 Dynamical Parallaxes 436
15.5 Eclipsing Binaries 437
15.6 Spectroscopic Binaries 442
15.7 Combination of Deduced Data 446
15.8 Binary Orbital Elements 446
15.9 The Period of a Binary 447
15.10 Apsidal Motion 448
15.11 Forces Acting on a Binary System 448
15.12 Triple Systems 449
15.13 The Inadequacy of Newton's Law of Gravitation 451
15.14 The Figures of Stars in Binary Systems 452
15.15 The Roche Limits 454
15.16 Circumstellar Matter 455
15.17 The Origin of Binary Systems 456
Problems 457
Bibliography 457

16 Many-Body Stellar Systems 458
16.1 Introduction 458
16.2 The Sphere of Influence 458
16.3 The Binary Encounter 459
16.4 The Cumulative Effect of Small Encounters 462
16.5 Some Fundamental Concepts 464
16.6 The Fundamental Theorems of Stellar Dynamics 465
16.6.1 Jeans's theorem 467

© IOP Publishing Ltd 2005

16.7 Some Special Cases for a Stellar System in a Steady State 468
16.8 Galactic Rotation 469
16.8.1 Oort's constants 470
16.8.2 The period of rotation and angular velocity of the galaxy 472
16.8.3 The mass of the Galaxy 473
16.8.4 The mode of rotation of the Galaxy 475
16.8.5 The gravitational potential of the Galaxy 479
16.8.6 Galactic stellar orbits 480
16.8.7 The high-velocity stars 484
16.9 Spherical Stellar Systems 485
16.9.1 Application of the virial theorem to a spherical system 486
16.9.2 Stellar orbits in a spherical system 487
16.9.3 The distribution of orbits within a spherical system 489
16.10 Modern Galactic Studies 489
Problems 492
Bibliography 493
