

Differential Equations with Applications to Biology

Shigui Ruan, Gail S.K. Wolkowicz, Jianhong Wu, editors

ISBN-10: 082180944X

ISBN-13: 9780821809440

Table of Contents

Preface	
On a Class of Nonlocal Problems with Applications to Mathematical Biology	1
Integrodifference Equations Applied to Plant Dispersal, Competition, and Control	15
Differential and Stochastic Epidemic Models	31
General Recruitment Models for Sexually Transmitted Diseases	45
Asymptotic Behavior of Two Interacting Pioneer/Climax Species	51
Stability and Bifurcation of a Simple Neural Network with Multiple Time Delays	65
Herding Behavior: The Emergence of Large-Scale Phenomena from Local Interactions	81
On the Formation of Scroll Waves in an Anisotropic Ventricular Myocardium	97
An Optimal Control Theory Approach to the Inverse Problem of Electrocardiography	109
Natural Selection as an Extensive Form Game	119
Growth in the Unstirred Chemostat with Different Diffusion Rates	131
Bifurcation Aspects for some Delayed Population Models with Diffusion	143
Extinction and Persistence in a Size-Structured, Discrete Competitive System with Dispersion	159
Global Attractivity in a Nonlocal Reaction-Diffusion Model	175
Nonlocal Reaction-Diffusion Equations	187
Practical Persistence in Stochastic Population Models	205
Structure and Dynamics of Artificial Neural Networks	217
Continuity of Resetting Curves for FitzHugh-Nagumo Equations on the Circle	225
An Epidemic Model with Recruitment-Death Demographics and Discrete Delays	237
Nonlinear Propagation in Reaction Transport Systems	251
On the Dynamics of Nonlinear Feedback Loops in Cell Membrane, Neural and Sensory Systems	259
Skew Product Flows of Quasi-Processes and Stabilities	269
Periodic Solutions to System of Globally Coupled Oscillators	279
Bifurcation Structure of Stationary Solutions of a Lotka-Volterra Competition Model with Density-Dependent Diffusion	293
Stability Domain of a Chemostat System with Delay	307
Oscillation Criteria for Second Order Half-Linear Differential Equations	317
Rich Dynamics of Gause-Type Ratio-Dependent Predator-Prey System	325
Differentiability with Respect to Delays for a Neutral Differential-Difference Equation	339
Renormalizations for Trimodal Maps	353
Statistical Stability of Strongly Perturbed Dynamical Systems	363
A Generalization of Variation of Parameters and Lyapunov's Method	377
Persistence in an Epidemiological Model	387
Homoclinic Bifurcations in a Diffusively Coupled Excitable System	397
Compactness and Asymptotic Spatial Homogeneity in Conservation Laws with Memory	409

On Boundary Value Problems for Quasilinear Elliptic Equations	419
A Model for the Production of Ovarian Hormones during the Menstrual Cycle	429
Global Stability for a General Population Model with Time Delays	447
Global Stability in Cyclic Epidemic Models with Disease Fatalities	459
Feedback Loops Analysis for Chaotic Dynamics with an Application to Lorenz System	473
Absolute Stability of the Second Canonical Form of Control Systems	485
Bogdanov-Takens Bifurcations in Predator-Prey Systems with Constant Rate Harvesting	493
Appendix: List of Participants	507
