The Reconstruction of Trees from Their Automorphism Groups

Matatyahu Rubín

American Mathematical Society
Providence, Rhode Island

Contents

Summary	vii
0. An extended introduction	1
1. Some preliminaries concerning interpretations, groups and \aleph_0 -categoricity	29
2. A new reconstruction theorem for Boolean algebras	43
3. The completion and the Boolean algebra of a U-tree	57
4. The statement of the canonization and reconstruction theorems	63
5. The canonization of trees	73
6. The reconstruction of the Boolean algebra of a U-tree	87
7. The reconstruction of $PT(\text{Exp}(M))$	135
8. Final reconstruction results	153
9. Observations, examples and discussion	155
10. Augmented trees	169
11. The reconstruction of \aleph_0 -categorical trees	205
12. Nonisomorphic 1-homogeneous chains which have isomorphic automorphism groups	243
Bibliography	251
A list of notations and definitions	253
