Preface	v
<i>Chapter 1</i>	
The classical planes	1
11 The classical division algebras	4
12 The classical affine planes	25
13 The projective planes over \mathbb{R} , \mathbb{C} , and \mathbb{H}	42
14 The planes over \mathbb{R} , \mathbb{C} , and \mathbb{H} as topological planes	56
15 Geometry of a projective line	65
16 The projective octonion plane $\mathcal{P}_2\mathbb{O}$	77
17 The collineation group of $\mathcal{P}_2\mathbb{O}$	88
18 Motion groups of $\mathcal{P}_2\mathbb{O}$	103
<i>Chapter 2</i>	
Background on planes, coordinates and collineations	131
21 Projective and affine planes	131
22 Coordinates, ternary fields	135
23 Collineations	137
24 Lenz–Barlotti types	142
25 Translation planes and quasifields	144
<i>Chapter 3</i>	
Geometries on surfaces	148
31 \mathbb{R}^2 -planes	149
32 Two-dimensional compact projective planes	163
33 Towards classification	178
34 The Moulton planes	185
35 Skew hyperbolic planes	196
36 Skew parabola planes	202
37 Planes over Cartesian fields	205
38 Flexibility, rigidity and related topics	212

Chapter 4

Compact projective planes	216
41 The topology of locally compact planes	217
42 Compact, connected planes	225
43 Ternary fields for compact planes	230
44 Automorphism groups	235

Chapter 5

Algebraic topology of compact, connected planes	244
51 General properties	245
52 Assuming that lines are manifolds	257
53 Conditions implying that lines are manifolds	266
54 Lines are homology manifolds	276
55 Geometric consequences	283

Chapter 6

Homogeneity	309
61 Axial collineations	311
62 Planes admitting a classical motion group	323
63 Transitive groups	339
64 Transitive axial groups	349
65 Groups of large dimension	368
66 Remarks on von Staudt's point of view	370

Chapter 7

Four-dimensional planes	372
71 Automorphism groups	373
72 Characterizing $\mathcal{P}_2\mathbb{C}$	383
73 Four-dimensional translation planes	393
74 Four-dimensional shift planes	420
75 Analytic planes	445

Chapter 8

Eight- and sixteen-dimensional planes	449
81 Translation planes	452
82 Classification of translation planes	477
83 Stiffness	519
84 Characterizing $\mathcal{P}_2\mathbb{H}$	535
85 Characterizing $\mathcal{P}_2\mathbb{O}$	547

86 Hughes planes	555
87 Principles of classification	581
 <i>Chapter 9</i>	
Appendix: Tools from topology and Lie theory	590
91 Permutation groups	590
92 Topological dimension and remarks on general topology	592
93 Locally compact groups and Lie groups	597
94 Lie groups and their structure	602
95 Linear representations	616
96 Transformation groups	630
 Bibliography	
Bibliography	643
Notation	679
Index	683
