Contents

Preface ix

1 Overview of Robotic Mechanisms and Controller 1

1.1 Mechanisms 1

1.2 Controller 9

Exercises 11

References 12

2 Kinematics 13

2.1 Position and Orientation of Objects 13

2.1.1 Object Coordinate Frame 13

2.1.2 Rotation Matrix 14

2.1.3 Euler Angles 18

2.1.4 Roll, Pitch, and Yaw Angles 22

2.2 Coordinate Transformation 23

2.2.1 Homogeneous Transform 23

2.2.2 Product and Inverse of Homogeneous Transform 26

2.3 Joint Variables and Position of End Effector 28

2.3.1 General Relation 28

2.3.2 Link Parameters 31

2.3.3 Link Frames 33

2.3.4 Solution to Direct Kinematics Problem 39

2.4 Inverse Kinematics Problem 45

2.5 Jacobian Matrix 53

2.5.1 Translational and Rotational Velocity of Objects 53

2.5.2 Definition of the Jacobian Matrix 57

2.5.3 Link Velocities of a Manipulator 60

2.5.4 General Expression of the Jacobian Matrix J_v 63

2.5.5 Joint Velocity for Achieving Desired End-Effector Velocity 66

2.5.6 Singular Configurations 67

2.6 Statics and Jacobian Matrices 71

2.6.1 Equivalent Forces Represented in Different Frames 71

2.6.2 Joint Driving Force Equivalent to Force Applied to Tip of Manipulator 74

Exercises 76

References 80

3 Dynamics 81

3.1 Lagrangian and Newton-Euler Formulations 81

3.2 Some Basics of Kinematics 82
- 3.2.1 Newton's Equation and Euler's Equation 82
- 3.2.2 Lagrange's Equation 86

3.3 Derivation of Dynamics Equations Based on Lagrangian Formulation 88
- 3.3.1 Two-Link Manipulator 88
- 3.3.2 *n*-Link Manipulator 91
- 3.3.3 Parallel-Drive Two-Link Manipulator 98

3.4 Derivation of Dynamic Equations Based on Newton-Euler Formulation 100
- 3.4.1 Basic Procedure of Newton-Euler Formulation 100
- 3.4.2 Link Accelerations of a Manipulator 102
- 3.4.3 *n*-Link Manipulator 103

3.5 Use of Dynamics Equations and Computational Load 108
- 3.5.1 Real-Time Control—Inverse Dynamics Problem 108
- 3.5.2 Simulation—Direct Dynamics Problem 110

3.6 Identification of Manipulator Dynamics 112
- 3.6.1 Identification Problem of Manipulators 112
- 3.6.2 Identification Scheme Based on Lagrangian Formulation 113
- 3.6.3 Identification of Load 122

Exercises 123

References 125

4 Manipulability 127

4.1 Manipulability Ellipsoid and Manipulability Measure 127

4.2 Best Configurations of Robotic Mechanisms from Manipulability Viewpoint 133
- 4.2.1 Two-Link Mechanism 133
- 4.2.2 SCARA-Type Robot Manipulator 135
- 4.2.3 PUMA-Type Robot Manipulator 137
- 4.2.4 Orthogonal-, Cylindrical-, and Polar-Coordinate Manipulators 139
- 4.2.5 Four-Joint Robotic Finger 139

4.3 Various Indices of Manipulability 142

4.4 Dynamic Manipulability 143
4.4.1 Dynamic-Manipulability Ellipsoid and Dynamic-Manipulability Measure 143
4.4.2 Two-Link Mechanism 148
Exercises 153
References 153

5 Position Control 155

5.1 Generating a Desired Trajectory 155
5.1.1 Joint-Variable Scheme 155
5.1.2 Scheme for Position Variables of End Effector 161
5.2 Linear Feedback Control 166
5.2.1 Effectiveness of Linear Feedback Control 166
5.2.2 Stability of Proportional and Differential Feedback Control 168
5.3 Two-Stage Control by Linearization and Servo Compensation 170
5.3.1 Basic Concept of Two-Stage Control 170
5.3.2 Structure of Control System 175
5.3.3 Parallel Processing Scheme 176
5.4 Design and Evaluation of Servo Compensation 182
5.4.1 Linear Servosystem Theory 182
5.4.2 Stability Margin and Sensitivity 187
5.5 Decoupling Control 192
5.5.1 Theory of Decoupling Control for Nonlinear Systems 192
5.5.2 Application to Manipulators 196
5.5.3 Consideration of Actuator Dynamics 197
5.6 Adaptive Control 199
Exercises 207
References 209

6 Force Control 211

6.1 Impedance Control 211
6.1.1 Passive-Impedance Method 211
6.1.2 Active-Impedance Method—One-Degree-of-Freedom Case 214
6.1.3 Active-Impedance Method—General Case 218

6.2 Hybrid Control 222
6.2.1 Hybrid Control via Feedback Compensation 222
6.2.2 Dynamic Hybrid Control 227
Exercises 240
References 242

7 Control of Redundant Manipulators 244

7.1 Redundant Manipulators 244
7.2 Task-Decomposition Approach 245
7.2.1 Decomposing a Task into Subtasks with Priority Order 245
7.2.2 Basic Equations 245
7.2.3 Second Subtask Given by Desired Trajectory 247
7.2.4 Second Subtask Given by Criterion Function 248
7.2.5 Formulation as Instantaneous Optimization Problem 249
7.3 Application to Avoiding Obstacles and Singularities 249
7.3.1 Avoiding Obstacles 249
7.3.2 Avoiding Singularities 253
7.4 Computational Method for Desired Joint Velocity 256
Exercises 257
References 258

Appendix 1 Function atan2 259

Appendix 2 Pseudo-Inverses 263

Appendix 3 Singular-Value Decomposition 268

Appendix 4 Lyapunov Stability Theory 272

Solutions to Selected Exercises 277
