Contents

Introduction	1
Zero Equivalence	7
2.1 Zero-equivalence of Constants	8
2.1.1 Richardson's Uniformity Conjecture	11
2.2 Zero-equivalence of Functions	13
2.2.1 Examples	22
2.2.2 The sets \mathcal{S}_i	25
2.3 Modular Methods in Zero Equivalence	27
2.3.1 Hensel Lifting	28
2.3.2 Examples	30
2.4 Growth in Degrees	31
2.4.1 Canonical Forms	32
2.5 Systems of Partial Differential Equations	33
2.5.1 Notation	33
2.5.2 Radical Differential Ideals	35
2.5.3 Computing Characteristic Sets	36
2.5.4 The Rosenfeld-Gröbner Algorithm	36
2.5.5 Consequences, Applications	38
2.5.6 Zero Equivalence	39
2.6 Finding Symmetries	39
Hardy Fields	43
3.1 Definitions and Examples	43
3.2 Building Hardy Fields	45
3.3 Rough Comparisons	50
3.4 The Map γ_2	54
Output Data Structures	59
4.1 Asymptotic Power Series	59
4.2 Multiseries	61

4.3	Operations on Multiseries	63
4.3.1	Substituting into a Power Series	65
4.3.2	The Logarithm of a Multiseries	68
4.3.3	The Exponential of a Multiseries	69
4.3.4	Powers of a Multiseries	69
4.3.5	Amalgamating Scales	70
4.3.6	Substituting One Multiseries Into Another	70
4.4	Nested Expansions	71
4.4.1	Comparison of Nested Forms	74
4.4.2	Operations on Nested Forms and Expansions	76
4.5	The Algebra of Star Products	78
4.5.1	Definitions and Elementary Properties	78
4.5.2	Differentiation and Star Products	81
Algorithms for Function Towers		83
5.1	The Exp-Log Algorithm	84
5.1.1	Case 1: $f_i = \log h, h \in \mathcal{F}_{i-1}$	85
5.1.2	Case 2: $f_i = \exp h, h \in \mathcal{F}_{i-1}$	86
5.1.3	Handling Denominators and Other Powers	87
5.1.4	Summary of the Algorithm	88
5.1.5	Examples	88
5.2	Asymptotic Fields	92
5.2.1	Adding Exponentials	100
5.2.2	Adding Integrals	101
5.2.3	Algebraic Equations	110
5.3	Compositions with Meromorphic Functions	116
5.4	Cartesian Representations	125
Algebraic Differential Equations		129
6.1	Nested Forms of Hardy–Field Solutions	130
6.1.1	Examples	140
6.2	The Number of Cases	144
6.3	Reducing the Complexity	150
6.3.1	A Theorem for Sparse Differential Equations	151
Inverse Functions		155
7.1	Inverting a Nested Expansion	156
7.1.1	Summary of the Algorithm for Inversion	161
7.1.2	Example	161
7.2	Multiseries of Inverse Functions	163
7.2.1	Proof of the Iteration Formula	169
7.2.2	Asymptotic Fields and Inverse Functions	173

Implicit Functions 175

 8.1 A Special Case 176

 8.1.1 Computation and Checking of Candidates 177

 8.1.2 Examples 178

 8.2 Systems of Exp–Log Equations 179

 8.2.1 Zero Equivalence 180

 8.2.2 Sketch of the Method 180

 8.2.3 Building estimates from the Tower of Fields 182

 8.2.4 Extension by a Logarithm 182

 8.2.5 Extension by an Exponential 183

 8.2.6 Obtaining the Nested Forms 184

 8.2.7 Example 1 185

 8.2.8 Example 2 187

 8.2.9 Example 3 189

Star–Product Expansions 191

 9.1 Exp–Log Expansions 191

 9.1.1 Rewriting Exp–Log Expressions Into Standard Star
 Expansion Form 193

 9.1.2 Order Comparisons 196

 9.2 Growth Classes in Hardy Fields 201

 9.2.1 Generalizing the γ_n s 201

 9.3 Generalized Star Products 204

 9.3.1 Expansions 207

 9.3.2 Non-integral Iterates and Multiple Scales 208

 9.4 Real Iterates of Increasing Functions 209

Oscillating Functions 215

 10.1 An Interval Calculus Algorithm 216

 10.1.1 Our Calculus of Intervals 217

 10.2 Lim-sup and Lim-inf 220

 10.3 Wandering Functions 224

 10.4 Wandering Expansions 231
