Arithmetic and Analytic Theories of Quadratic Forms and Clifford Groups

Goro Shimura

American Mathematical Society

TABLE OF CONTENTS

Preface vii

Notation and Terminology ix

Introduction 1

Chapter I. Algebraic theory of quadratic forms, Clifford algebras, and spin groups 9

1. Quadratic forms and associative algebras 9
2. Clifford algebras 15
3. Clifford groups and spin groups 20
4. Parabolic subgroups 28

Chapter II. Quadratic forms, Clifford algebras, and spin groups over a local or global field 37

5. Orders and ideals in an algebra 37
6. Quadratic forms over a local field 45
7. Lower-dimensional cases and the Hasse principle 52
8. Part I. Clifford groups over a local field 62
8. Part II. Formal Hecke algebras and formal Euler factors 72
9. Orthogonal, Clifford, and spin groups over a global field 80

Chapter III. Quadratic Diophantine equations 93

10. Quadratic Diophantine equations over a local field 93
11. Quadratic Diophantine equations over a global field 101
12. The class number of an orthogonal group and sums of squares 113
13. Nonscalar quadratic Diophantine equations; Connection with the mass formula; A historical perspective 126

Chapter IV. Groups and symmetric spaces over R 139

14. Clifford and spin groups over **R**; The case of signature $(1, m)$ 139
15. The case of signature $(2, m)$ 146
16. Orthogonal groups over **R** and symmetric spaces 154

Chapter V. Euler products and Eisenstein series on orthogonal groups 163

17. Automorphic forms and Euler products on an orthogonal group 163

18. Eisenstein series on O^{ω} 173
19. Eisenstein series on O^{η} 181
20. Arithmetic description of the pullback of an Eisenstein series 187
21. Analytic continuation of Euler products and Eisenstein series 196

Chapter VI. Euler products and Eisenstein series on Clifford groups **205**
22. Euler products on $G^{+}(V)$ 205
23. Eisenstein series on $G(H, 2^{-1}\eta)$ 212
24. Eisenstein series of general types on a Clifford group 218
25. Euler products for holomorphic forms on a Clifford group 226
26. Proof of the last main theorem 234

Appendix **243**
A1. Differential operators on a semisimple Lie group 243
A2. Eigenvalues of integral operators 250
A3. Structure of Clifford algebras over $\mathbf{R}$ 261
A4. An embedding of $G^{1}(V)$ into a symplectic group 265
A5. Spin representations and Lie algebras 268
